MARKET RISK – TRADING ACTIVITIES We engage in trading activities to accommodate the investment and risk management activities of our customers and to execute economic hedging to manage certain balance sheet risks. These trading activities predominantly occur within our CIB businesses and to a lesser extent other businesses of the Company. Debt securities held for trading, equity securities held for trading, trading loans and trading derivatives are financial instruments used in our trading activities, and all are carried at fair value. Income earned on the financial instruments used in our trading activities include net interest income, changes in fair value and realized gains and losses. Net interest income earned from our trading activities is reflected in the interest income and interest expense components of our consolidated statement of income. Changes in fair value of the financial instruments used in our trading activities are reflected in net gains from trading activities. For additional information on the financial instruments used in our trading activities and the income from these trading activities, see Note 2 (Trading Activities) to Financial Statements in this Report.

Value-at-risk (VaR) is a statistical risk measure used to estimate the potential loss from adverse moves in the financial markets. The Company uses VaR metrics complemented with sensitivity analysis and stress testing in measuring and monitoring market risk. For additional information on our monitoring activities, sensitivity analysis and stress testing, see the “Risk Management – Asset/Liability Management – Market Risk – Trading Activities” section in our 2020 Form 10-K.

Trading VaR is the measure used to provide insight into the market risk exhibited by the Company’s trading positions. The Company calculates Trading VaR for risk management purposes to establish line of business and Company-wide risk limits. Trading VaR is calculated based on all trading positions on our consolidated balance sheet.

Table 29 shows the Company’s Trading General VaR by risk category. The decrease in average Company Trading General VaR for the quarter ended June 30, 2021, compared with the same period a year ago, was driven by a greater presence of market volatility dropping out of the 12-month historical lookback window used to calculate average Company Trading General VaR for the quarter ended June 30, 2021. Market volatility present in average Company Trading General VaR for the quarter ended June 30, 2020, was driven by the introduction of the COVID-19 pandemic, in particular, changes in interest rate curves and a significant widening of credit spreads.

Table 29: Trading 1-Day 99% General VaR by Risk Category

(in millions)	June 30, 2021				March 31, 2021				Quarter ended June 30, 2020			
	Period end	Average	Low	High	Period end	Average	Low	High	Period end	Average	Low	High
	Company Trading General VaR Risk Categories											
Credit	\$ 14	21	12	30	22	94	21	112	86	82	61	99
Interest rate	7	7	4	22	36	73	26	120	155	106	42	161
Equity	29	37	25	56	35	36	28	72	14	10	6	17
Commodity	28	7	2	28	11	5	2	12	4	4	2	7
Foreign exchange	0	1	0	1	1	1	1	1	1	2	1	3
Diversification benefit (1)	(38)	(30)			(64)	(111)			(51)	(49)		
Company Trading General VaR	40	43			41	98			209	155		

(1) The period-end VaR was less than the sum of the VaR components described above, which is due to portfolio diversification. The diversification effect arises because the risks are not perfectly correlated causing a portfolio of positions to usually be less risky than the sum of the risks of the positions alone. The diversification benefit is not meaningful for low and high metrics since they may occur on different days.

MARKET RISK – EQUITY SECURITIES We are directly and indirectly affected by changes in the equity markets. We make and manage direct investments in start-up businesses, emerging growth companies, management buy-outs, acquisitions and corporate recapitalizations. We also invest in non-affiliated funds that make similar private equity investments. For additional information, see the “Risk Management – Asset/Liability Management – Market Risk – Equity Securities” section in our 2020 Form 10-K.

We also have marketable equity securities that include investments relating to our venture capital activities. The fair value changes in these marketable equity securities are recognized in net income. For additional information, see Note 6 (Equity Securities) to Financial Statements in this Report.

Changes in equity market prices may also indirectly affect our net income by (1) the value of third-party assets under management and, hence, fee income, (2) borrowers whose ability to repay principal and/or interest may be affected by the stock market, or (3) brokerage activity, related commission income and other business activities. Each business line monitors and manages these indirect risks.

LIQUIDITY RISK AND FUNDING In the ordinary course of business, we enter into contractual obligations that may require future cash payments, including funding for customer loan requests, customer deposit maturities and withdrawals, debt service, leases for premises and equipment, and other cash commitments. The objective of effective liquidity management is to ensure that we can meet our contractual obligations and other cash commitments efficiently under both normal operating conditions and under periods of Wells Fargo-specific and/or market stress. To help achieve this objective, we monitor both

the consolidated company and the Parent on a stand-alone basis to ensure that the Parent is a source of strength for its regulated, deposit-taking banking subsidiaries. The Parent acts as a source of funding for the Company through the issuance of long-term debt and equity, and WFC Holdings, LLC, an intermediate holding company and subsidiary of the Parent (the “IHC”), provides funding support for the ongoing operational requirements of the Parent and certain of its direct and indirect subsidiaries. For additional information on liquidity risk and funding management, see the “Risk Management – Liquidity Risk and Funding” section in our 2020 Form 10-K. For additional information on the IHC, see the “Regulatory Matters – ‘Living Will’ Requirements and Related Matters” section in this Report.

Liquidity Standards We are subject to a rule, issued by the FRB, OCC and FDIC, that establishes a quantitative minimum liquidity requirement consistent with the liquidity coverage ratio (LCR) established by the Basel Committee on Banking Supervision (BCBS). The rule requires a covered banking organization, such as Wells Fargo, to hold high-quality liquid assets (HQLA), predominantly consisting of central bank deposits, government debt securities, and mortgage-backed securities of federal agencies that can be converted easily and quickly into cash, in an amount equal to or greater than its projected net cash outflows during a 30-day stress period. The LCR applies to the Company on a consolidated basis and to our insured depository institutions (IDIs) with total assets of \$10 billion or more. In addition, rules issued by the FRB impose enhanced liquidity risk management standards on large bank holding companies (BHCs), such as Wells Fargo.

The FRB, OCC and FDIC have also issued a rule implementing a stable funding requirement, known as the net stable funding

Risk Management – Asset/Liability Management (continued)

ratio (NSFR), which requires a covered banking organization, such as Wells Fargo, to maintain a minimum amount of stable funding, including common equity, long-term debt and most types of deposits, in relation to its assets, derivative exposures and commitments over a one-year horizon period. The NSFR became effective on July 1, 2021, and applies to the Company on a consolidated basis and to our IDIs with total assets of \$10 billion or more. As of July 1, 2021, we were compliant with the NSFR requirement.

Liquidity Coverage Ratio As of June 30, 2021, the consolidated Company, Wells Fargo Bank, N.A., and Wells Fargo National Bank West exceeded the minimum LCR requirement of 100%, which is calculated as HQLA divided by projected net cash outflows, as each is defined under the LCR rule. Table 30 presents the Company’s quarterly average values for the daily-calculated LCR and its components calculated pursuant to the LCR rule requirements.

Table 30: Liquidity Coverage Ratio

(in millions, except ratio)	Average for Quarter ended		
	Jun 30, 2021	Mar 31, 2021	Jun 30, 2020
HQLA (1):			
Eligible cash	\$ 248,404	216,403	166,947
Eligible securities (2)	137,718	186,270	242,520
Total HQLA	386,122	402,673	409,467
Projected net cash outflows	314,678	316,116	316,268
LCR	123%	127	129

(1) Excludes excess HQLA at certain subsidiaries that is not transferable to other Wells Fargo entities.
(2) Net of applicable haircuts required under the LCR rule.

Liquidity Sources We maintain liquidity in the form of cash, cash equivalents and unencumbered high-quality, liquid debt securities. These assets make up our primary sources of liquidity. Our primary sources of liquidity are substantially the same in composition as HQLA under the LCR rule; however, our primary sources of liquidity will generally exceed HQLA calculated under the LCR rule due to the applicable haircuts to HQLA and the exclusion of excess HQLA at our subsidiary IDIs required under the LCR rule. Our primary sources of liquidity are presented in Table 31, which also includes encumbered securities that are not included as available HQLA in the calculation of the LCR.

Our cash is predominantly on deposit with the Federal Reserve. Debt securities included as part of our primary sources of liquidity are comprised of U.S. Treasury and federal agency debt, and MBS issued by federal agencies within our debt securities portfolio. We believe these debt securities provide quick sources of liquidity through sales or by pledging to obtain financing, regardless of market conditions. Some of these debt securities are within our HTM portfolio and, as such, are not intended for sale but may be pledged to obtain financing.

Table 31: Primary Sources of Liquidity

(in millions)	June 30, 2021			December 31, 2020		
	Total	Encumbered	Unencumbered	Total	Encumbered	Unencumbered
Interest-earning deposits with banks	\$ 248,869	—	248,869	236,376	—	236,376
Debt securities of U.S. Treasury and federal agencies	63,934	3,304	60,630	70,756	5,370	65,386
Mortgage-backed securities of federal agencies	280,984	52,700	228,284	258,668	49,156	209,512
Total	\$ 593,787	56,004	537,783	565,800	54,526	511,274

In addition to our primary sources of liquidity shown in Table 31, liquidity is also available through the sale or financing of other debt securities including trading and/or AFS debt securities, as well as through the sale, securitization or financing of loans, to the extent such debt securities and loans are not encumbered. As of June 30, 2021, we also maintained approximately \$222.7 billion of available borrowing capacity at various Federal Home Loan Banks and the Federal Reserve Discount Window.

Deposits have historically provided a sizable source of relatively low-cost funds. Deposits were 169% and 158% of total loans at June 30, 2021, and December 31, 2020, respectively. Additional funding is provided by long-term debt and short-term borrowings. Table 32 shows selected information for short-term borrowings, which generally mature in less than 30 days. We pledge certain financial instruments that we own to collateralize repurchase agreements and other securities financings. For additional information, see the “Pledged Assets” section of Note 12 (Pledged Assets and Collateral) to Financial Statements in this Report.

Table 32: Short-Term Borrowings

(in millions)	Quarter ended				
	Jun 30, 2021	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020
Balance, period end					
Federal funds purchased and securities sold under agreements to repurchase	\$ 33,708	46,871	46,362	44,055	49,659
Other short-term borrowings	11,927	12,049	12,637	11,169	10,826
Total	\$ 45,635	58,920	58,999	55,224	60,485
Average daily balance for period					
Federal funds purchased and securities sold under agreements to repurchase	\$ 36,526	47,358	46,069	46,504	52,868
Other short-term borrowings	11,979	11,724	11,235	10,788	10,667
Total	\$ 48,505	59,082	57,304	57,292	63,535
Maximum month-end balance for period					
Federal funds purchased and securities sold under agreements to repurchase (1)	\$ 33,708	47,050	46,879	49,148	50,397
Other short-term borrowings (2)	12,563	12,049	12,637	11,169	11,220

(1) Maximum month-end balance in each of the last five quarters was in June and February 2021, and November, July and April 2020.

(2) Maximum month-end balance in each of the last five quarters was in April and March 2021, and December, September and April 2020.

Long-Term Debt We access domestic and international capital markets for long-term funding (generally greater than one year) through issuances of registered debt securities, private placements and asset-backed secured funding. We issue long-term debt in a variety of maturities and currencies to achieve cost-efficient funding and to maintain an appropriate maturity profile. Proceeds from securities issued were used for general corporate purposes, and, unless otherwise specified in the applicable prospectus or prospectus supplement, we expect the proceeds from securities issued in the future will be used for the

same purposes. Depending on market conditions, we may purchase our outstanding debt securities from time to time in privately negotiated or open market transactions, by tender offer, or otherwise. We issued \$1.0 billion and \$1.1 billion of long-term debt in the second quarter and first half of 2021, respectively. Table 33 provides the aggregate carrying value of long-term debt maturities (based on contractual payment dates) for the remainder of 2021 and the following years thereafter, as of June 30, 2021.

Table 33: Maturity of Long-Term Debt

(in millions)	June 30, 2021

Risk Management – Asset/Liability Management (continued)

Credit Ratings Investors in the long-term capital markets, as well as other market participants, generally will consider, among other factors, a company’s debt rating in making investment decisions. Rating agencies base their ratings on many quantitative and qualitative factors, including capital adequacy, liquidity, asset quality, business mix, the level and quality of earnings, and rating agency assumptions regarding the probability and extent of federal financial assistance or support for certain large financial institutions. Adverse changes in these factors could result in a reduction of our credit rating; however, our debt securities do not contain credit rating covenants.

On April 22, 2021, Moody’s Investors Service (Moody’s) affirmed our ratings and retained the negative ratings outlook. On July 12, 2021, Moody’s upgraded the senior debt rating of the Company to A1 from A2 as a result of revisions to its bank

ratings methodology. On May 24, 2021, DBRS Morningstar confirmed our ratings and retained the negative ratings trend. On June 14, 2021, Fitch Ratings affirmed our ratings and retained the negative ratings outlook.

See the “Risk Factors” section in our 2020 Form 10-K for additional information regarding our credit ratings and the potential impact a credit rating downgrade would have on our liquidity and operations, as well as Note 14 (Derivatives) to Financial Statements in this Report for information regarding additional collateral and funding obligations required for certain derivative instruments in the event our credit ratings were to fall below investment grade.

The credit ratings of the Parent and Wells Fargo Bank, N.A., as of June 30, 2021, are presented in Table 34.

Table 34: Credit Ratings as of June 30, 2021

	Wells Fargo & Company		Wells Fargo Bank, N.A.	
	Senior debt	Short-term borrowings	Long-term deposits	Short-term borrowings
Moody’s	A2	P-1	Aa1	P-1
S&P Global Ratings	BBB+	A-2	A+	A-1
Fitch Ratings	A+	F1	AA	F1+
DBRS Morningstar	AA (low)	R-1 (middle)	AA	R-1 (high)

FEDERAL HOME LOAN BANK MEMBERSHIP The Federal Home Loan Banks (the FHLBs) are a group of cooperatives that lending institutions use to finance housing and economic development in local communities. We are a member of the FHLBs based in Dallas, Des Moines and San Francisco. FHLB members are required to maintain a minimum investment in capital stock of the applicable FHLB. The board of directors of each FHLB can increase the minimum investment requirements in the event it has concluded that additional capital is required to allow it to meet its own regulatory capital requirements. Any increase in the minimum investment requirements outside of specified ranges requires the approval of the Federal Housing Finance Agency. Because the extent of any obligation to increase our investment in any of the FHLBs depends entirely upon the occurrence of a future event, the amount of any future investment in the capital stock of the FHLBs is not determinable.

Capital Management

We have an active program for managing capital through a comprehensive process for assessing the Company's overall capital adequacy. Our objective is to maintain capital at an amount commensurate with our risk profile and risk tolerance objectives, and to meet both regulatory and market expectations. We primarily fund our capital needs through the retention of earnings net of both dividends and share repurchases, as well as through the issuance of preferred stock and long- and short-term debt. Retained earnings at June 30, 2021, increased \$9.1 billion from December 31, 2020, predominantly as a result of \$10.7 billion of Wells Fargo net income, partially offset by \$1.5 billion of common and preferred stock dividends. During the first half of 2021, we issued \$819 million of common stock, substantially all of which was issued in connection with employee compensation and benefits. During the first half of 2021, we repurchased 53 million shares of common stock at a cost of \$2.2 billion. For additional information about capital planning, see the "Capital Planning and Stress Testing" section below.

In the first half of 2021, we issued \$4.6 billion of preferred stock and redeemed \$4.9 billion of preferred stock, including the redemption of the remaining \$350 million of our Preferred Stock, Series N, in June 2021. In July 2021, we issued \$1.25 billion of our Preferred Stock, Series DD. For additional information, see Note 16 (Preferred Stock) to Financial Statements in this Report.

Regulatory Capital Requirements

The Company and each of our IDIs are subject to various regulatory capital adequacy requirements administered by the FRB and the OCC. Risk-based capital rules establish risk-adjusted ratios relating regulatory capital to different categories of assets and off-balance sheet exposures as discussed below.

RISK-BASED CAPITAL AND RISK-WEIGHTED ASSETS The Company is subject to rules issued by federal banking regulators to implement Basel III capital requirements for U.S. banking organizations. The rules contain two frameworks for calculating capital requirements, a Standardized Approach and an Advanced Approach applicable to certain institutions, including Wells Fargo. Our capital adequacy is assessed based on the lower of our risk-based capital ratios calculated under the two approaches. The Company is required to satisfy the risk-based capital ratio requirements to avoid restrictions on capital distributions and discretionary bonus payments. Table 35 and Table 36 present the risk-based capital requirements applicable to the Company on a fully phased-in basis under the Standardized Approach and Advanced Approach, respectively, as of June 30, 2021.

Table 35: Risk-Based Capital Requirements – Standardized Approach

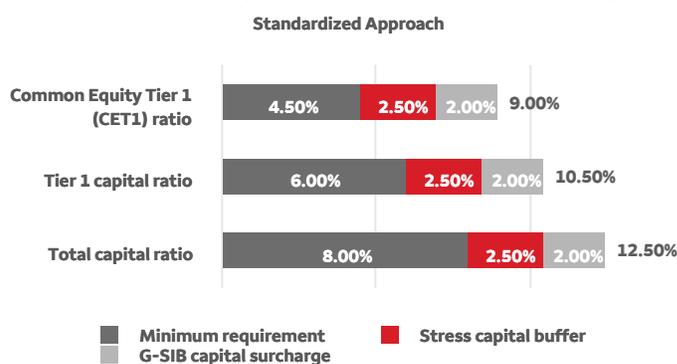

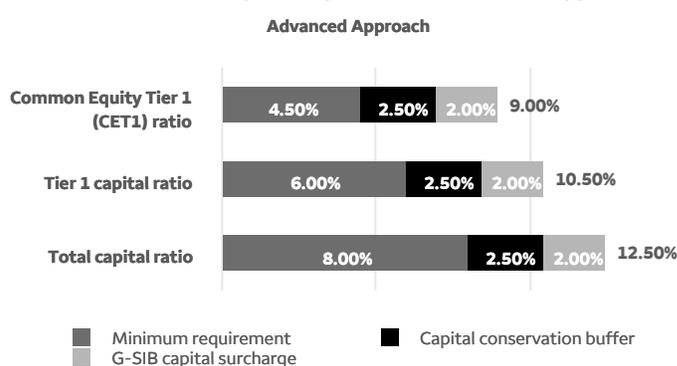

Table 36: Risk-Based Capital Requirements – Advanced Approach

In addition to the risk-based capital requirements described in Table 35 and Table 36, if the FRB determines that a period of excessive credit growth is contributing to an increase in systemic risk, a countercyclical buffer of up to 2.50% could be added to the risk-based capital ratio requirements under federal banking regulations.

The capital conservation buffer is applicable to certain institutions, including Wells Fargo, under the Advanced Approach and is intended to absorb losses during times of economic or financial stress.

The stress capital buffer is calculated based on the decrease in a BHC's risk-based capital ratios under the severely adverse scenario in the FRB's annual supervisory stress test and related Comprehensive Capital Analysis and Review (CCAR), plus four quarters of planned common stock dividends. Because the stress capital buffer is calculated annually based on data that can differ over time, our stress capital buffer, and thus our risk-based capital ratio requirements under the Standardized Approach, are subject to change in future periods. The Company's stress capital buffer for the period October 1, 2020, through September 30, 2021, is 2.50%. The Company expects its stress capital buffer for the period October 1, 2021, through September 30, 2022, to be 3.10%. The FRB has indicated that it will publish the final stress capital buffer for the period October 1, 2021, through September 30, 2022, for each BHC by August 31, 2021.

Capital Management (continued)

As a global systemically important bank (G-SIB), we are also subject to the FRB's rule implementing an additional capital surcharge of between 1.00-4.50% on the risk-based capital requirements of G-SIBs. Under the rule, we must annually calculate our surcharge under two methods and use the higher of the two surcharges. The first method (method one) considers our size, interconnectedness, cross-jurisdictional activity, substitutability, and complexity, consistent with the methodology developed by the BCBS and the Financial Stability Board (FSB). The second method (method two) uses similar inputs, but replaces substitutability with use of short-term wholesale funding and will generally result in higher surcharges than under method one. Because the G-SIB capital surcharge is calculated annually based on data that can differ over time, the amount of the surcharge is subject to change in future years. We expect our G-SIB capital surcharge to decrease by 50 basis points to 1.50% beginning in first quarter 2022, subject to finalization in fourth quarter 2021.

The Basel III capital requirements for calculating CET1 and tier 1 capital, along with risk-weighted assets (RWAs), are fully phased-in. However, the requirements for determining tier 2 and total capital are still in accordance with transition requirements and are scheduled to be fully phased-in by the end of 2021.

Under the risk-based capital rules, on-balance sheet assets and credit equivalent amounts of derivatives and off-balance sheet items are assigned to one of several broad risk categories

according to the obligor, or, if relevant, the guarantor or the nature of any collateral. The aggregate dollar amount in each risk category is then multiplied by the risk weight associated with that category. The resulting weighted values from each of the risk categories are aggregated for determining total RWAs.

The tables that follow provide information about our risk-based capital and related ratios as calculated under Basel III capital rules. Although we report certain capital amounts and ratios in accordance with transition requirements for bank regulatory reporting purposes, we manage our capital on a fully phased-in basis. For information about our capital requirements calculated in accordance with transition requirements, see Note 23 (Regulatory Capital Requirements and Other Restrictions) to Financial Statements in this Report.

Table 37 summarizes our CET1, tier 1 capital, total capital, RWAs and capital ratios on a fully phased-in basis at June 30, 2021, and December 31, 2020. Fully phased-in total capital amounts and ratios are considered non-GAAP financial measures that are used by management, bank regulatory agencies, investors and analysts to assess and monitor the Company's capital position. See Table 38 for information regarding the calculation and components of our CET1, tier 1 capital, total capital and RWAs, as well as a corresponding reconciliation to GAAP financial measures for our fully phased-in total capital amounts.

Table 37: Capital Components and Ratios (Fully Phased-In)

(in millions, except ratios)	Required Capital Ratios (1)	June 30, 2021		December 31, 2020		
		Advanced Approach	Standardized Approach	Advanced Approach	Standardized Approach	
Common Equity Tier 1	(A)	\$ 143,442	143,442	138,297	138,297

Risk-Weighted Assets (RWAs) (5):				
Credit risk (6)	\$ 729,917	1,140,459	752,999	1,125,813
Market risk	48,268	48,268	67,931	67,931
Operational risk	348,350	—	337,425	—
Total RWAs	\$ 1,126,535	1,188,727	1,158,355	1,193,744

(1) In second quarter 2021, we elected to change our accounting method for low-income housing tax credit investments and elected to change the presentation of investment tax credits related to solar energy investments. Prior period total equity was revised to conform with the current period presentation. Prior period risk-based capital and certain other regulatory related metrics were not revised.

(2) Determined by applying the combined federal statutory rate and composite state income tax rates to the difference between book and tax basis of the respective goodwill and intangible assets at period end.

(3) At June 30, 2021, the impact of the CECL transition provision issued by federal banking regulators on our regulatory capital was an increase in capital of \$879 million, reflecting a \$991 million (post-tax) increase in capital recognized upon our initial adoption of CECL, offset by 25% of the \$7.5 billion increase in our ACL under CECL from January 1, 2020, through June 30, 2021.

(4) Under the Advanced Approach the allowance for credit losses that exceeds expected credit losses is eligible for inclusion in tier 2 capital, to the extent the excess allowance does not exceed 0.60% of Advanced credit RWAs, and under the Standardized Approach, the allowance for credit losses is includable in tier 2 capital up to 1.25% of Standardized credit RWAs, in each case with any excess allowance for credit losses being deducted from the respective total RWAs.

(5) RWAs calculated under the Advanced Approach utilize a risk-sensitive methodology, which relies upon the use of internal credit models based upon our experience with internal rating grades.

Advanced Approach also includes an operational risk component, which reflects the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events.

(6) Includes an increase of \$547 million under the Standardized Approach and a decrease of \$1.4 billion under the Advanced Approach related to the impact of the CECL transition provision on our excess allowance for credit losses as of June 30, 2021. See footnote (4) to this table.

Capital Management (continued)

Table 39 presents the changes in CET1 for the six months ended June 30, 2021.

Table 39: Analysis of Changes in Common Equity Tier 1

TANGIBLE COMMON EQUITY We also evaluate our business based on certain ratios that utilize tangible common equity. Tangible common equity is a non-GAAP financial measure and represents total equity less preferred equity, noncontrolling interests, goodwill, certain identifiable intangible assets (other than MSRs) and goodwill and other intangibles on nonmarketable equity securities, net of applicable deferred taxes. The ratios are (i) tangible book value per common share, which represents tangible common equity divided by common shares outstanding; and (ii) return on average tangible common equity (ROTCE),

which represents our annualized earnings as a percentage of tangible common equity. The methodology of determining tangible common equity may differ among companies. Management believes that tangible book value per common share and return on average tangible common equity, which utilize tangible common equity, are useful financial measures because they enable management, investors, and others to assess the Company's use of equity.

Table 41 provides a reconciliation of these non-GAAP financial measures to GAAP financial measures.

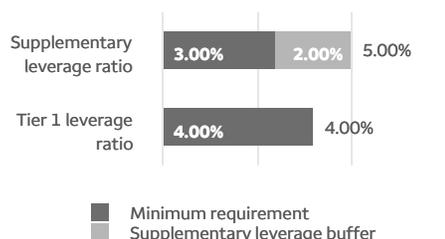

Table 41: Tangible Common Equity

(in millions, except ratios)	Balance at period end						Average balance	
	Quarter ended			Quarter ended			Six months ended	
	Jun 30, 2021	Mar 31, 2021	Jun 30, 2020	Jun 30, 2021	Mar 31, 2021	Jun 30, 2020	Jun 30, 2021	Jun 30, 2020
Total equity	\$ 193,127	188,034	178,635	190,968	189,074	184,072	190,026	185,982

Return on average common stockholders' equity (ROE) (annualized) (D)/(A)	N/A	N/A	N/A	13.59 %	10.33	(10.24)	11.98 %	(4.70)%
Return on average tangible common equity (ROTCE) (annualized) (D)/(B)	N/A	N/A	N/A	16.26	12.41	(12.35)	14.36 %	(5.66)%

(1) Determined by applying the combined federal statutory rate and composite state income tax rates to the difference between book and tax basis of the respective goodwill and intangible assets at period end.

LEVERAGE REQUIREMENTS As a BHC, we are required to maintain a supplementary leverage ratio (SLR) to avoid restrictions on capital distributions and discretionary bonus payments and maintain a minimum tier 1 leverage ratio. Table 42 presents the leverage requirements applicable to the Company as of June 30, 2021.

Table 42: Leverage Requirements Applicable to the Company

In addition, our IDIs are required to maintain an SLR of at least 6.00% to be considered well capitalized under applicable regulatory capital adequacy rules and maintain a minimum tier 1 leverage ratio of 4.00%.

The FRB and OCC have proposed amendments to the SLR rules. For information regarding the proposed amendments to the SLR rules, see the "Capital Management – Leverage Requirements" section in our 2020 Form 10-K.

At June 30, 2021, the Company's SLR was 7.09%, and each of our IDIs exceeded their applicable SLR requirements. Table 43 presents information regarding the calculation and components of the Company's SLR and tier 1 leverage ratio.

Capital Management (continued)

Table 43: Leverage Ratios for the Company

(in millions, except ratios)	Quarter ended June 30, 2021	
Tier 1 capital	(A)	\$ 162,999
Total average assets		1,940,757
Less: Goodwill and other permitted Tier 1 capital deductions (net of deferred tax liabilities)		29,103
Less: Other SLR exclusions		—
Total adjusted average assets		1,911,654
Plus adjustments for off-balance sheet exposures:		
Derivatives (1)		68,738
Repo-style transactions (2)		3,626
Other (3)		316,398
Total off-balance sheet exposures		388,762
Total leverage exposure	(B)	\$ 2,300,416
Supplementary leverage ratio	(A)/(B)	7.09%
Tier 1 leverage ratio (4)		8.53%

- (1) Adjustment represents derivatives and collateral netting exposures as defined for supplementary leverage ratio determination purposes.
(2) Adjustment represents counterparty credit risk for repo-style transactions where Wells Fargo & Company is the principal counterparty facing the client.
(3) Adjustment represents credit equivalent amounts of other off-balance sheet exposures not already included as derivatives and repo-style transactions exposures.
(4) The tier 1 leverage ratio consists of tier 1 capital divided by total average assets, excluding goodwill and certain other items as determined under the rule.

TOTAL LOSS ABSORBING CAPACITY As a G-SIB, we are required to have a minimum amount of equity and unsecured long-term debt for purposes of resolvability and resiliency, often referred to as Total Loss Absorbing Capacity (TLAC). U.S. G-SIBs are required to have a minimum amount of TLAC (consisting of CET1 capital and additional tier 1 capital issued directly by the top-tier or covered BHC plus eligible external long-term debt) to avoid restrictions on capital distributions and discretionary bonus payments, as well as a minimum amount of eligible unsecured long-term debt. The components used to calculate our minimum TLAC and eligible unsecured long-term debt requirements as of June 30, 2021, are presented in Table 44.

Table 44: Components Used to Calculate TLAC and Eligible Unsecured Long-Term Debt Requirements

TLAC requirement	
Greater of:	
18.00% of RWAs	7.50% of total leverage exposure (the denominator of the SLR calculation)
+	+
TLAC buffer (equal to 2.50% of RWAs + method one G-SIB capital surcharge + any countercyclical buffer)	External TLAC leverage buffer (equal to 2.00% of total leverage exposure)
Minimum amount of eligible unsecured long-term debt	
Greater of:	
6.00% of RWAs	4.50% of total leverage exposure
+	
Method two G-SIB capital surcharge	

The FRB and OCC have proposed amendments to the TLAC and eligible unsecured long-term debt requirements. For information regarding these proposed amendments, see the “Capital Management – Total Loss Absorbing Capacity” section in our 2020 Form 10-K.

Table 45 provides our TLAC and eligible unsecured long-term debt and related ratios as of June 30, 2021, and December 31, 2020.

Table 45: TLAC and Eligible Unsecured Long-Term Debt

(\$ in millions)	TLAC (1)	Regulatory Minimum (2)	Eligible Unsecured Long-term Debt	Regulatory Minimum
	June 30, 2021			
Total eligible amount	\$298,496		129,411	
Percentage of RWAs (3)	25.11 %	21.50	10.89	8.00
Percentage of total leverage exposure	12.98	9.50	5.63	4.50
	December 31, 2020			
Total eligible amount	\$307,226		140,703	
Percentage of RWAs (3)	25.74 %	22.00	11.79	8.00
Percentage of total leverage exposure (4)	15.64	9.50	7.16	4.50

- (1) TLAC ratios are calculated using the CECL transition provision issued by federal banking regulators.
(2) Represents the minimum required to avoid restrictions on capital distributions and discretionary bonus payments.
(3) Our minimum TLAC and eligible unsecured long-term debt requirements are calculated based on the greater of RWAs determined under the Standardized and Advanced Approaches.
(4) Total leverage exposure at December 31, 2020, reflected an interim final rule issued by the FRB that temporarily allowed a bank holding company to exclude on-balance sheet amounts of U.S. Treasury securities and deposits at Federal Reserve Banks from the calculation of its total leverage exposure.

OTHER REGULATORY CAPITAL AND LIQUIDITY MATTERS For information regarding the U.S. implementation of the Basel III LCR and NSFR, see the “Risk Management – Asset/ Liability Management – Liquidity Risk and Funding – Liquidity Standards” section in this Report.

Capital Planning and Stress Testing

Our planned long-term capital structure is designed to meet regulatory and market expectations. We believe that our long-term targeted capital structure enables us to invest in and grow our business, satisfy our customers’ financial needs in varying environments, access markets, and maintain flexibility to return capital to our shareholders. Our long-term targeted capital structure also considers capital levels sufficient to exceed capital requirements including the G-SIB capital surcharge. Accordingly, we currently target a long-term CET1 capital ratio that is 100 basis points above our regulatory requirement plus an incremental buffer of 25 to 50 basis points. Our capital targets are subject to change based on various factors, including changes to the regulatory capital framework and expectations for large banks promulgated by bank regulatory agencies, changes to the regulatory requirements for our capital ratios, planned capital actions, changes in our risk profile and other factors.

The FRB capital plan rule establishes capital planning and other requirements that govern capital distributions, including dividends and share repurchases, by certain BHCs, including Wells Fargo. The FRB assesses, among other things, the overall financial condition, risk profile, and capital adequacy of BHCs when evaluating their capital plans.

On March 25, 2021, the FRB announced that it was extending measures it previously announced limiting large BHCs, including Wells Fargo, from making any capital distribution (excluding any capital distribution arising from the issuance of a capital instrument eligible for inclusion in the numerator of a regulatory capital ratio), unless otherwise approved by the FRB. The FRB generally authorized BHCs to (i) provided that the BHC does not increase the amount of its common stock dividends to

be larger than the level paid in second quarter 2020, pay common stock dividends and make share repurchases that, in the aggregate, do not exceed an amount equal to the average of the BHC's net income for the four preceding calendar quarters; (ii) make share repurchases that equal the amount of share issuances related to expensed employee compensation; and (iii) redeem and make scheduled payments on additional tier 1 and tier 2 capital instruments. These limitations on capital distributions ended on June 30, 2021.

Concurrently with CCAR, federal banking regulators also require large BHCs and banks to conduct their own stress tests to evaluate whether the institution has sufficient capital to continue to operate during periods of adverse economic and financial conditions.

In June 2021, the Company completed the 2021 CCAR stress test process. On July 27, 2021, the Board approved an increase to the Company's third quarter 2021 common stock dividend to \$0.20 per share. Additionally, our capital plan includes gross common share repurchases of approximately \$18 billion for the four-quarter period beginning third quarter 2021 through second quarter 2022.

Regulatory Matters

The U.S. financial services industry is subject to significant regulation and regulatory oversight initiatives. This regulation and oversight may continue to impact how U.S. financial services companies conduct business and may continue to result in increased regulatory compliance costs.

For a discussion of certain consent orders applicable to the Company, see the "Overview" section in this Report. The following supplements our discussion of the other significant regulations and regulatory oversight initiatives that have affected or may affect our business contained in the "Regulatory Matters" and "Risk Factors" sections in our 2020 Form 10-K.

"Living Will" Requirements and Related Matters

Rules adopted by the FRB and the FDIC under the Dodd-Frank Act require large financial institutions, including Wells Fargo, to prepare and periodically submit resolution plans, also known as "living wills," that would facilitate their rapid and orderly resolution in the event of material financial distress or failure. Under the rules, rapid and orderly resolution means a reorganization or liquidation of the covered company under the U.S. Bankruptcy Code that can be accomplished in a reasonable period of time and in a manner that substantially mitigates the risk that failure would have serious adverse effects on the financial stability of the United States. In addition to the Company's resolution plan, our national bank subsidiary, Wells Fargo Bank, N.A. (the "Bank"), is also required to prepare and periodically submit a resolution plan. If the FRB and/or FDIC determine that our resolution plan has deficiencies, they may impose more stringent capital, leverage or liquidity requirements on us or restrict our growth, activities or operations until we adequately remedy the deficiencies. If the FRB and/or FDIC ultimately determine that we have been unable to remedy any deficiencies, they could require us to divest certain assets or operations. On June 29, 2021, we submitted our most recent resolution plan to the FRB and FDIC.

If Wells Fargo were to fail, it may be resolved in a bankruptcy proceeding or, if certain conditions are met, under the resolution regime created by the Dodd-Frank Act known as the "orderly liquidation authority." The orderly liquidation authority allows for the appointment of the FDIC as receiver for a systemically

Securities Repurchases

From time to time the Board authorizes the Company to repurchase shares of our common stock. Although we announce when the Board authorizes share repurchases, we typically do not give any public notice before we repurchase our shares. Various factors determine the amount of our share repurchases, including our capital requirements, the number of shares we expect to issue for employee benefit plans and acquisitions, market conditions (including the trading price of our stock), and regulatory and legal considerations, including under the FRB's capital plan rule. Due to the various factors that may impact the amount of our share repurchases and the fact that we tend to be in the market regularly to satisfy repurchase considerations under our capital plan, our share repurchases occur at various price levels. We may suspend share repurchase activity at any time.

At June 30, 2021, we had remaining Board authority to repurchase approximately 615 million shares, subject to regulatory and legal conditions. For additional information about share repurchases during second quarter 2021, see Part II, Item 2 in this Report.

important financial institution that is in default or in danger of default if, among other things, the resolution of the institution under the U.S. Bankruptcy Code would have serious adverse effects on financial stability in the United States. If the FDIC is appointed as receiver for Wells Fargo & Company (the "Parent"), then the orderly liquidation authority, rather than the U.S. Bankruptcy Code, would determine the powers of the receiver and the rights and obligations of our security holders. The FDIC's orderly liquidation authority requires that security holders of a company in receivership bear all losses before U.S. taxpayers are exposed to any losses, and allows the FDIC to disregard the strict priority of creditor claims under the U.S. Bankruptcy Code in certain circumstances.

The strategy described in our most recent resolution plan is a single point of entry strategy, in which the Parent would likely be the only material legal entity to enter resolution proceedings. However, we are not obligated to maintain a single point of entry strategy, and the strategy described in our resolution plan is not binding in the event of an actual resolution of Wells Fargo, whether conducted under the U.S. Bankruptcy Code or by the FDIC under the orderly liquidation authority. The FDIC has announced that a single point of entry strategy may be a desirable strategy under its implementation of the orderly liquidation authority, but not all aspects of how the FDIC might exercise this authority are known and additional rulemaking is possible.

To facilitate the orderly resolution of systemically important financial institutions in case of material distress or failure, federal banking regulations require that institutions, such as Wells Fargo, maintain a minimum amount of equity and unsecured debt to absorb losses and recapitalize operating subsidiaries. Federal banking regulators have also required measures to facilitate the continued operation of operating subsidiaries notwithstanding the failure of their parent companies, such as limitations on parent guarantees, and have issued guidance encouraging institutions to take legally binding measures to provide capital and liquidity resources to certain subsidiaries to facilitate an orderly resolution. In response to the regulators' guidance and to facilitate the orderly resolution of the Company, on June 28, 2017, the Parent entered into a support agreement, as amended

Regulatory Matters (continued)

and restated on June 26, 2019 (the “Support Agreement”), with WFC Holdings, LLC, an intermediate holding company and subsidiary of the Parent (the “IHC”), the Bank, Wells Fargo Securities, LLC (“WFS”), Wells Fargo Clearing Services, LLC (“WFCS”), and certain other subsidiaries of the Parent designated from time to time as material entities for resolution planning purposes (the “Covered Entities”) or identified from time to time as related support entities in our resolution plan (the “Related Support Entities”). Pursuant to the Support Agreement, the Parent transferred a significant amount of its assets, including the majority of its cash, deposits, liquid securities and intercompany loans (but excluding its equity interests in its subsidiaries and certain other assets), to the IHC and will continue to transfer those types of assets to the IHC from time to time. In the event of our material financial distress or failure, the IHC will be obligated to use the transferred assets to provide capital and/or liquidity to the Bank, WFS, WFCS, and the Covered Entities pursuant to the Support Agreement. Under the Support Agreement, the IHC will also provide funding and liquidity to the Parent through subordinated notes and a committed line of credit, which, together with the issuance of dividends, is expected to provide the Parent, during business as usual operating conditions, with the same access to cash necessary to service its debts, pay dividends, repurchase its shares, and perform its other obligations as it would have had if it had not entered into these arrangements and transferred any assets. If certain liquidity and/or capital metrics fall below defined triggers, or if the Parent’s board of directors authorizes it to file a case under the U.S. Bankruptcy Code, the subordinated notes would be forgiven, the committed line of credit would terminate, and the IHC’s ability to pay dividends to the Parent would be restricted, any of which could materially and adversely impact the Parent’s liquidity and its ability to satisfy its debts and other obligations, and could result in the commencement of bankruptcy proceedings by the Parent at an earlier time than might have otherwise occurred if the Support Agreement were not implemented. The respective obligations under the Support Agreement of the Parent, the IHC, the Bank, and the Related Support Entities are secured pursuant to a related security agreement.

In addition to our resolution plans, we must also prepare and submit to the FRB a recovery plan that identifies a range of options that we may consider during times of idiosyncratic or systemic economic stress to remedy any financial weaknesses and restore market confidence without extraordinary government support. Recovery options include the possible sale, transfer or disposal of assets, securities, loan portfolios or businesses. The Bank must also prepare and submit to the OCC a recovery plan that sets forth the Bank’s plan to remain a going concern when the Bank is experiencing considerable financial or operational stress, but has not yet deteriorated to the point where liquidation or resolution is imminent. If either the FRB or the OCC determines that our recovery plan is deficient, they may impose fines, restrictions on our business or ultimately require us to divest assets.

Critical Accounting Policies

Our significant accounting policies (see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K) are fundamental to understanding our results of operations and financial condition because they require that we use estimates and assumptions that may affect the value of our assets or liabilities and financial results. Six of these policies are critical because they require management to make difficult, subjective and complex judgments about matters that are inherently uncertain and because it is likely that materially different amounts would be reported under different conditions or using different assumptions. These policies govern:

- the allowance for credit losses;
- the valuation of residential MSRs;
- the fair value of financial instruments;
- income taxes;
- liability for contingent litigation losses; and
- goodwill impairment.

Management has discussed these critical accounting policies and the related estimates and judgments with the Board's Audit Committee. For additional information on these policies, see the "Critical Accounting Policies" section and Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

Current Accounting Developments

The following significant accounting update has been issued by the Financial Accounting Standards Board (FASB) and is applicable to us, but is not yet effective:

- Accounting Standards Update (ASU or Update) 2018-12 – Financial Services – Insurance (Topic 944): *Targeted Improvements to the Accounting for Long-Duration Contracts* and subsequent related updates

ASU 2018-12 See the "Current Accounting Developments" section in our 2020 Form 10-K for information on the effective date and our assessment of the expected financial statement impact upon adoption.

Other Accounting Developments

The following Updates are applicable to us but are not expected to have a material impact on our consolidated financial statements:

- ASU 2020-06 – Debt – Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging – Contracts in Entity's Own Equity (Subtopic 815-40): *Accounting for Convertible Instruments and Contracts in an Entity's Own Equity*
- ASU 2021-05 – Leases (Topic 842): *Lessors – Certain Leases with Variable Lease Payments*

Forward-Looking Statements

This document contains forward-looking statements. In addition, we may make forward-looking statements in our other documents filed or furnished with the Securities and Exchange Commission, and our management may make forward-looking statements orally to analysts, investors, representatives of the media and others. Forward-looking statements can be identified by words such as “anticipates,” “intends,” “plans,” “seeks,” “believes,” “estimates,” “expects,” “target,” “projects,” “outlook,” “forecast,” “will,” “may,” “could,” “should,” “can” and similar references to future periods. In particular, forward-looking statements include, but are not limited to, statements we make about: (i) the future operating or financial performance of the Company, including our outlook for future growth; (ii) our noninterest expense and efficiency ratio; (iii) future credit quality and performance, including our expectations regarding future loan losses, our allowance for credit losses, and the economic scenarios considered to develop the allowance; (iv) our expectations regarding net interest income and net interest margin; (v) loan growth or the reduction or mitigation of risk in our loan portfolios; (vi) future capital or liquidity levels, ratios or targets; (vii) the performance of our mortgage business and any related exposures; (viii) the expected outcome and impact of legal, regulatory and legislative developments, as well as our expectations regarding compliance therewith; (ix) future common stock dividends, common share repurchases and other uses of capital; (x) our targeted range for return on assets, return on equity, and return on tangible common equity; (xi) expectations regarding our effective income tax rate; (xii) the outcome of contingencies, such as legal proceedings; (xiii) environmental, social and governance related goals or commitments; and (xiv) the Company’s plans, objectives and strategies.

Forward-looking statements are not based on historical facts but instead represent our current expectations and assumptions regarding our business, the economy and other future conditions. Because forward-looking statements relate to the future, they are subject to inherent uncertainties, risks and changes in circumstances that are difficult to predict. Our actual results may differ materially from those contemplated by the forward-looking statements. We caution you, therefore, against relying on any of these forward-looking statements. They are neither statements of historical fact nor guarantees or assurances of future performance. While there is no assurance that any list of risks and uncertainties or risk factors is complete, important factors that could cause actual results to differ materially from those in the forward-looking statements include the following, without limitation:

- current and future economic and market conditions, including the effects of declines in housing prices, high unemployment rates, U.S. fiscal debt, budget and tax matters, geopolitical matters, and any slowdown in global economic growth;
- the effect of the COVID-19 pandemic, including on our credit quality and business operations, as well as its impact on general economic and financial market conditions;
- our capital and liquidity requirements (including under regulatory capital standards, such as the Basel III capital standards) and our ability to generate capital internally or raise capital on favorable terms;
- current, pending or future legislation or regulation that could have a negative effect on our revenue and businesses, including rules and regulations relating to bank products and financial services;
- developments in our mortgage banking business, including the extent of the success of our mortgage loan modification efforts, the amount of mortgage loan repurchase demands that we receive, any negative effects relating to our mortgage servicing, loan modification or foreclosure practices, and the effects of regulatory or judicial requirements or guidance impacting our mortgage banking business and any changes in industry standards;
- our ability to realize any efficiency ratio or expense target as part of our expense management initiatives, including as a result of business and economic cyclicality, seasonality, changes in our business composition and operating environment, growth in our businesses and/or acquisitions, and unexpected expenses relating to, among other things, litigation and regulatory matters;
- the effect of the current interest rate environment or changes in interest rates or in the level or composition of our assets or liabilities on our net interest income, net interest margin and our mortgage originations, mortgage servicing rights and mortgage loans held for sale;
- significant turbulence or a disruption in the capital or financial markets, which could result in, among other things, reduced investor demand for mortgage loans, a reduction in the availability of funding or increased funding costs, and declines in asset values and/or recognition of impairments of securities held in our debt securities and equity securities portfolios;
- the effect of a fall in stock market prices on our investment banking business and our fee income from our brokerage and wealth management businesses;
- negative effects from the retail banking sales practices matter and from other instances where customers may have experienced financial harm, including on our legal, operational and compliance costs, our ability to engage in certain business activities or offer certain products or services, our ability to keep and attract customers, our ability to attract and retain qualified employees, and our reputation;
- resolution of regulatory matters, litigation, or other legal actions, which may result in, among other things, additional costs, fines, penalties, restrictions on our business activities, reputational harm, or other adverse consequences;
- a failure in or breach of our operational or security systems or infrastructure, or those of our third-party vendors or other service providers, including as a result of cyber attacks;
- the effect of changes in the level of checking or savings account deposits on our funding costs and net interest margin;
- fiscal and monetary policies of the Federal Reserve Board;
- changes to U.S. tax guidance and regulations, as well as the effect of discrete items on our effective income tax rate;
- our ability to develop and execute effective business plans and strategies; and
- the other risk factors and uncertainties described under “Risk Factors” in our Annual Report on Form 10-K for the year ended December 31, 2020.

In addition to the above factors, we also caution that the amount and timing of any future common stock dividends or repurchases will depend on the earnings, cash requirements and

financial condition of the Company, market conditions, capital requirements (including under Basel capital standards), common stock issuance requirements, applicable law and regulations (including federal securities laws and federal banking regulations), and other factors deemed relevant by the Company's Board of Directors, and may be subject to regulatory approval or conditions.

For additional information about factors that could cause actual results to differ materially from our expectations, refer to our reports filed with the Securities and Exchange Commission, including the discussion under "Risk Factors" in our Annual Report on Form 10-K for the year ended December 31, 2020, as filed with the Securities and Exchange Commission and available on its website at www.sec.gov.¹

Any forward-looking statement made by us speaks only as of the date on which it is made. Factors or events that could cause our actual results to differ may emerge from time to time, and it is not possible for us to predict all of them. We undertake no obligation to publicly update any forward-looking statement, whether as a result of new information, future developments or otherwise, except as may be required by law.

Forward-looking Non-GAAP Financial Measures. From time to time management may discuss forward-looking non-GAAP financial measures, such as forward-looking estimates or targets for return on average tangible common equity. We are unable to provide a reconciliation of forward-looking non-GAAP financial measures to their most directly comparable GAAP financial measures because we are unable to provide, without unreasonable effort, a meaningful or accurate calculation or estimation of amounts that would be necessary for the reconciliation due to the complexity and inherent difficulty in forecasting and quantifying future amounts or when they may occur. Such unavailable information could be significant to future results.

Risk Factors

An investment in the Company involves risk, including the possibility that the value of the investment could fall substantially and that dividends or other distributions on the investment could be reduced or eliminated. For a discussion of risk factors that could adversely affect our financial results and condition, and the value of, and return on, an investment in the Company, we refer you to the “Risk Factors” section in our 2020 Form 10-K.

Controls and Procedures

Disclosure Controls and Procedures

The Company's management evaluated the effectiveness, as of June 30, 2021, of the Company's disclosure controls and procedures. The Company's chief executive officer and chief financial officer participated in the evaluation. Based on this evaluation, the Company's chief executive officer and chief financial officer concluded that the Company's disclosure controls and procedures were effective as of June 30, 2021.

Internal Control Over Financial Reporting

Internal control over financial reporting is defined in Rule 13a-15(f) promulgated under the Securities Exchange Act of 1934 as a process designed by, or under the supervision of, the Company's principal executive and principal financial officers and effected by the Company's Board, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. generally accepted accounting principles (GAAP) and includes those policies and procedures that:

- pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of assets of the Company;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with GAAP, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. No change occurred during second quarter 2021 that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting.

- (1) In second quarter 2021, we elected to change our accounting method for low-income housing tax credit investments and elected to change the presentation of investment tax credits related to solar energy investments. Prior period balances have been revised to conform with the current period presentation. For additional information, see Note 1 (Summary of Significant Accounting Policies).
- (2) Prior period balances have been revised to conform with the current period presentation.

The accompanying notes are an integral part of these statements. See Note 1 (Summary of Significant Accounting Policies) for noncash activities.

Notes to Financial Statements

-See the Glossary of Acronyms at the end of this Report for terms used throughout the Financial Statements and related Notes.

Note 1: Summary of Significant Accounting Policies

Wells Fargo & Company is a diversified financial services company. We provide banking, investment and mortgage products and services, as well as consumer and commercial finance, through banking locations and offices, the internet and other distribution channels to individuals, businesses and institutions in all 50 states, the District of Columbia, and in countries outside the U.S. When we refer to “Wells Fargo,” “the Company,” “we,” “our” or “us,” we mean Wells Fargo & Company and Subsidiaries (consolidated). Wells Fargo & Company (the Parent) is a financial holding company and a bank holding company. We also hold a majority interest in a real estate investment trust, which has publicly traded preferred stock outstanding.

Our accounting and reporting policies conform with U.S. generally accepted accounting principles (GAAP) and practices in the financial services industry. For discussion of our significant accounting policies, see Note 1 (Summary of Significant Accounting Policies) in our Annual Report on Form 10-K for the year ended December 31, 2020 (2020 Form 10-K).

To prepare the financial statements in conformity with GAAP, management must make estimates based on assumptions about future economic and market conditions (for example, unemployment, market liquidity, real estate prices, etc.) that affect the reported amounts of assets and liabilities at the date of the financial statements, income and expenses during the reporting period and the related disclosures. Although our estimates contemplate current conditions and how we expect them to change in the future, it is reasonably possible that actual conditions could be worse than anticipated in those estimates, which could materially affect our results of operations and financial condition. Management has made significant estimates in several areas, including:

- allowance for credit losses (Note 4 (Loans and Related Allowance for Credit Losses));
- valuations of residential mortgage servicing rights (MSRs) (Note 8 (Securitizations and Variable Interest Entities) and Note 9 (Mortgage Banking Activities));
- valuations of financial instruments (Note 15 (Fair Values of Assets and Liabilities));
- liabilities for contingent litigation losses (Note 13 (Legal Actions));
- income taxes; and
- goodwill impairment (Note 10 (Intangible Assets)).

Actual results could differ from those estimates.

These unaudited interim financial statements reflect all adjustments that are, in the opinion of management, necessary for a fair statement of the results for the periods presented. These adjustments are of a normal recurring nature, unless otherwise disclosed in this Form 10-Q. The results of operations in the interim financial statements do not necessarily indicate the results that may be expected for the full year. The interim financial information should be read in conjunction with our 2020 Form 10-K.

Change in Accounting Policies

In second quarter 2021, we elected to change our accounting method for low-income housing tax credit (LIHTC) investments from the equity method of accounting to the proportional amortization method. Under the proportional amortization method, the investments are carried at amortized cost and amortized in proportion to the tax credits received. The amortization of the investments and the related tax impacts are recognized in income tax expense. Previously, we recognized the amortization of the investments in other noninterest income and the related tax impacts were recognized in income tax expense. We determined that the proportional amortization method is preferable because it better aligns the financial statement presentation with the economic impact of these investments, which generate tax credits over the lives of the investments. Adoption of the proportional amortization method was applied retrospectively, to the earliest period presented, which resulted in a cumulative-effect adjustment to reduce retained earnings by \$283 million as of January 1, 2020.

In second quarter 2021, we also elected to change the presentation of investment tax credits related to solar energy investments, which are accounted for under the deferral method. We reclassified the investment tax credits on our consolidated balance sheet from accrued expenses and other liabilities to a reduction of the carrying value of the investment balances. We also reclassified the investment tax credits, which are recognized over time, from income tax expense to interest income for solar energy leases or noninterest income for solar energy equity investments. We determined that this presentation is preferable because it better reflects the financial statement presentation of the investment tax credits as an integral component of the investments. The change in accounting policy was adopted retrospectively to January 1, 2020.

Table 1.1 presents the impact of the accounting policy changes for LIHTC investments and solar energy investments to our consolidated statement of income and consolidated balance sheet. There was no material impact to the consolidated statement of cash flows.

Table 1.1: Impact of the Accounting Policy Changes for LIHTC Investments and Solar Energy Investments

Accounting Standards Adopted in 2021

In 2021, we adopted the following new accounting guidance:

- Accounting Standards Update (ASU or Update) 2021-01 – Reference Rate Reform (Topic 848): *Scope*
- ASU 2020-08 – Codification Improvements to Subtopic 310-20, *Receivables – Nonrefundable Fees and Other Costs*
- ASU 2020-01 – Investments – Equity Securities (Topic 321), Investments – Equity Method and Joint Ventures (Topic 323), and Derivatives and Hedging (Topic 815): *Clarifying the Interactions between Topic 321, Topic 323, and Topic 815 (a consensus of the Financial Accounting Standards Board (FASB) Emerging Issues Task Force)*
- ASU 2019-12 – Income Taxes (Topic 740): *Simplifying the Accounting for Income Taxes*

ASU 2021-01 clarifies the scope of Topic 848 to include derivatives affected by changes in interest rates for margining, discounting, or contract price alignment as part of the market-wide transition to new reference rates (commonly referred to as the “discounting transition”), even if they do not reference the London Interbank Offered Rate or another rate that is expected to be discontinued as a result of reference rate reform. The Update also clarifies other aspects of the relief provided in Accounting Standards Codification (ASC) 848. We adopted this Update in first quarter 2021 on a prospective basis, and the guidance will be followed until the Update terminates on December 31, 2022. The Update did not have a material impact on our consolidated financial statements.

ASU 2020-08 clarifies the accounting for purchased callable debt securities carried at a premium and was issued to correct an unintended application of ASU 2017-08 – Receivables—Nonrefundable Fees and Other Costs (Subtopic 310-20): *Premium Amortization on Purchased Callable Debt Securities*, which requires amortization of such premiums to the earliest call date, but was not clear for the method to be used for instruments with multiple call dates. The Update now specifies that such premiums are amortized to the next call date and requires reassessment throughout the life of the instruments with multiple call dates. We adopted this Update in first quarter

2021. The Update did not have a material impact on our consolidated financial statements.

ASU 2020-01 clarifies the accounting for equity securities upon transition between the measurement alternative and equity method. The Update also clarifies for forward contracts and options to purchase equity securities an entity need not consider whether upon settlement of the forward contract or option if the equity securities would be accounted for by the equity method or the fair value option. We adopted this Update in first quarter 2021. The Update did not have a material impact on our consolidated financial statements.

ASU 2019-12 provides narrow scope simplifications and improvements to the general principles in ASC Topic 740 – Income Taxes related to intraperiod tax allocation, basis differences when there are changes in ownership of foreign investments and interim periods income tax accounting for year to date losses that exceed anticipated annual losses. We adopted this Update in first quarter 2021. The Update did not have a material impact on our consolidated financial statements.

Note 1: Summary of Significant Accounting Policies (continued)

Supplemental Cash Flow Information

Significant noncash activities are presented in Table 1.2.

Table 1.2: Supplemental Cash Flow Information

(in millions)	Six months ended June 30,	
	2021	2020
Held-to-maturity debt securities purchased from securitization of LHFS (1)	16,462	664
Transfers from loans to LHFS (2)	11,551	12,753
Transfers from available-for-sale debt securities to held-to-maturity debt securities	41,298	—

(1) For the six months ended June 30, 2021, predominantly represents agency mortgage-backed securities purchased upon settlement of the sale and securitization of our conforming residential mortgage loans. See Note 8 (Securitizations and Variable Interest Entities) for additional information.

(2) Prior periods have been revised to conform to the current period presentation.

Subsequent Events

We have evaluated the effects of events that have occurred subsequent to June 30, 2021, and, except as disclosed in Note 16 (Preferred Stock), there have been no material events that would require recognition in our second quarter 2021 consolidated financial statements or disclosure in the Notes to the consolidated financial statements.

Note 2: Trading Activities

Table 2.1 presents a summary of our trading assets and liabilities measured at fair value through earnings.

Table 2.1: Trading Assets and Liabilities

(in millions)	Jun 30, 2021	Dec 31, 2020
Trading assets:		
Debt securities	\$ 82,727	75,095
Equity securities	23,701	23,032
Loans held for sale	2,269	1,015
Gross trading derivative assets	54,965	58,767
Netting (1)	(31,052)	(34,301)
Total trading derivative assets	23,913	24,466
Total trading assets	132,610	123,608
Trading liabilities:		
Short sale	22,043	22,441
Gross trading derivative liabilities	45,441	53,285
Netting (1)	(33,614)	(39,444)
Total trading derivative liabilities	11,827	13,841
Total trading liabilities	\$ 33,870	36,282

(1) Represents balance sheet netting for trading derivative asset and liability balances, and trading portfolio level counterparty valuation adjustments.

Table 2.2 provides a summary of the net interest income earned from trading securities, and net gains and losses due to the realized and unrealized gains and losses from trading activities.

Net interest income also includes dividend income on trading securities and dividend expense on trading securities we have sold, but not yet purchased.

Table 2.2: Net Interest Income and Net Gains (Losses) on Trading Activities

(in millions)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Interest income:				
Debt securities	\$ 496	\$ 659	\$ 1,025	1,425
Equity securities	93	68	196	205
Loans held for sale	3	6	15	18
Total interest income	592	733	1,236	1,648
Less: Interest expense	105	116	215	257
Net interest income	487	617	1,021	1,391
Net gains (losses) from trading activities (1):				
Debt securities	769	329	(1,337)	2,684
Equity securities	856	2,329	2,009	(2,072)
Loans held for sale	15	24	39	12
Derivatives (2)	(1,619)	(1,875)	(342)	247
Total net gains from trading activities	21	807	369	871
Total trading-related net interest and noninterest income	\$ 508	\$ 1,424	\$ 1,390	2,262

(1) Represents realized gains (losses) from our trading activities and unrealized gains (losses) due to changes in fair value of our trading positions.

(2) Excludes economic hedging of mortgage banking and asset/liability management activities, for which hedge results (realized and unrealized) are reported with the respective hedged activities.

Note 3: Available-for-Sale and Held-to-Maturity Debt Securities

Table 3.1 provides the amortized cost, net of the allowance for credit losses (ACL) for debt securities, and fair value by major categories of available-for-sale (AFS) debt securities, which are carried at fair value, and held-to-maturity (HTM) debt securities, which are carried at amortized cost, net of the ACL. The net unrealized gains (losses) for AFS debt securities are reported as a component of cumulative other comprehensive income (OCI), net of the ACL and applicable income taxes. Information on debt securities held for trading is included in Note 2 (Trading Activities).

Outstanding balances exclude accrued interest receivable on AFS and HTM debt securities, which are included in other assets. See Note 7 (Other Assets) for additional information on accrued interest receivable. Amounts considered to be uncollectible are reversed through interest income. The interest income reversed in the second quarter and first half of both 2021 and 2020 was insignificant.

Table 3.1: Available-for-Sale and Held-to-Maturity Debt Securities Outstanding

(in millions)	Amortized cost, net (1)	Gross unrealized gains	Gross unrealized losses	Fair value
June 30, 2021

Total held-to-maturity debt securities	205,720	6,791	(204)	212,307
Total (4)	\$ 421,253	11,913	(467)	432,699

- Represents amortized cost of the securities, net of the ACL of \$33 million and \$28 million related to AFS debt securities and \$77 million and \$41 million related to HTM debt securities at June 30, 2021, and December 31, 2020, respectively.
- Includes investments in tax-exempt preferred debt securities issued by investment funds or trusts that predominantly invest in tax-exempt municipal securities. The amortized cost, net of the ACL and fair value of these types of securities, was \$5.2 billion at June 30, 2021, and \$5.0 billion at December 31, 2020.
- Predominantly consists of commercial mortgage-backed securities at both June 30, 2021, and December 31, 2020.
- We held AFS and HTM debt securities from Federal National Mortgage Association (FNMA) and Federal Home Loan Mortgage Corporation (FHLMC) that each exceeded 10% of stockholders' equity, with an amortized cost of \$119.8 billion and \$89.9 billion and a fair value of \$121.5 billion and \$91.3 billion at June 30, 2021, and an amortized cost of \$99.8 billion and \$88.7 billion and a fair value of \$103.2 billion and \$91.5 billion at December 31, 2020, respectively.

Table 3.2 details the breakout of purchases of and transfers to HTM debt securities by major category of security.

Table 3.2: Held-to-Maturity Debt Securities Purchases and Transfers

(in millions)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Purchases of held-to-maturity debt securities (1):				
Securities of U.S. Treasury and federal agencies	\$ —	—	\$ —	3,016
Securities of U.S. states and political subdivisions	1,173	15	3,083	881
Federal agency mortgage-backed securities	24,855	6,958	49,722	22,821
Non-agency mortgage-backed securities	55	12	84	74
Collateralized loan obligations	3,385	—	7,338	—
Total purchases of held-to-maturity debt securities	29,468	6,985	60,227	26,792
Transfers from available-for-sale debt securities to held-to-maturity debt securities:

Held-to-maturity	(11)	9	36	13
Total provision for credit losses	(21)	(31)	48	141
Realized gains and losses (2):				
Gross realized gains	1	248	152	504
Gross realized losses	(1)	(36)	(1)	(40)
Impairment write-downs	—	—	—	(15)
Net realized gains	\$ —	\$ 212	\$ 151	449

(1) Excludes interest income from trading debt securities, which is disclosed in Note 2 (Trading Activities).

(2) Realized gains and losses relate to AFS debt securities. There were no realized gains or losses from HTM debt securities in all periods presented.

Credit Quality

We monitor credit quality of debt securities by evaluating various attributes and utilize such information in our evaluation of the appropriateness of the ACL for debt securities. The credit quality indicators that we most closely monitor include credit ratings and delinquency status and are based on information as of our financial statement date.

CREDIT RATINGS Credit ratings express opinions about the credit quality of a debt security. We determine the credit rating of a security according to the lowest credit rating made available by national recognized statistical rating organizations (NRSROs). Debt securities rated investment grade, that is those with ratings similar to BBB-/Baa3 or above, as defined by NRSROs, are generally considered by the rating agencies and market participants to be low credit risk. Conversely, debt securities rated below investment grade, labeled as “speculative grade” by the rating agencies, are considered to be distinctively higher

credit risk than investment grade debt securities. For debt securities not rated by NRSROs, we determine an internal credit grade of the debt securities (used for credit risk management purposes) equivalent to the credit ratings assigned by major credit agencies. Substantially all of our debt securities were rated by NRSROs at June 30, 2021, and December 31, 2020.

Table 3.4 shows the percentage of fair value of AFS debt securities and amortized cost of HTM debt securities determined to be rated investment grade, inclusive of securities rated based on internal credit grades.

Total portfolio (1)	\$ 220,392	99%	205,761	99%
Breakdown by category:				
Securities of U.S. Treasury and federal agencies (2)	\$ 161,229	100%	162,732	100%
Securities of U.S. states and political subdivisions	19,406	99	25,870	100
Collateralized loan obligations (3)	9,018	100	16,255	100
All other debt securities (4)	30,739	93	904	6

(1) 94% and 92% were rated AA- and above at June 30, 2021, and December 31, 2020, respectively.

(2) Includes federal agency mortgage-backed securities.

(3) 99% and 98% were rated AA- and above at June 30, 2021, and December 31, 2020, respectively.

(4) Includes non-U.S. government, non-agency mortgage-backed, and all other debt securities.

DELINQUENCY STATUS AND NONACCRUAL DEBT SECURITIES Debt security issuers that are delinquent in payment of amounts due under contractual debt agreements have a higher probability of recognition of credit losses. As such, as part of our monitoring of the credit quality of the debt security portfolio, we consider whether debt securities we own are past due in payment of principal or interest payments and whether any securities have been placed into nonaccrual status.

Debt securities that are past due and still accruing were insignificant at both June 30, 2021, and December 31, 2020. The carrying value of debt securities in nonaccrual status was insignificant at both June 30, 2021, and December 31, 2020. Charge-offs on debt securities were insignificant in the second quarter and first half of both 2021 and 2020.

Purchased debt securities with credit deterioration (PCD) are not considered to be in nonaccrual status, as payments from issuers of these securities remain current. PCD securities were insignificant in the second quarter and first half of both 2021 and 2020.

Unrealized Losses of Available-for-Sale Debt Securities

Table 3.5 shows the gross unrealized losses and fair value of AFS debt securities by length of time those individual securities in each category have been in a continuous loss position. Debt securities on which we have recorded credit impairment are

categorized as being “less than 12 months” or “12 months or more” in a continuous loss position based on the point in time that the fair value declined to below the amortized cost basis, net of allowance for credit losses.

Table 3.5: Gross Unrealized Losses and Fair Value – Available-for-Sale Debt Securities

(in millions)	Less than 12 months		12 months or more		Total	
	Gross unrealized losses	Fair value	Gross unrealized losses	Fair value	Gross unrealized losses	Fair value

Total available-for-sale debt securities	\$ (152)	38,898	(111)	5,353	(263)	44,251

We have assessed each debt security with gross unrealized losses included in the previous table for credit impairment. As part of that assessment we evaluated and concluded that we do not intend to sell any of the debt securities, and that it is more likely than not that we will not be required to sell, prior to recovery of the amortized cost basis. We evaluate, where necessary, whether credit impairment exists by comparing the present value of the expected cash flows to the debt securities' amortized cost basis. Credit impairment is recorded as an ACL for debt securities.

For descriptions of the factors we consider when analyzing debt securities for impairment as well as methodology and significant inputs used to measure credit losses, see Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K.

Note 3: Available-for-Sale and Held-to-Maturity Debt Securities (continued)

Contractual Maturities

Table 3.6 and Table 3.7 show the remaining contractual maturities, amortized cost, net of the ACL, fair value and weighted average effective yields of AFS and HTM debt securities, respectively. The remaining contractual principal

maturities for mortgage-backed securities (MBS) do not consider prepayments. Remaining expected maturities will differ from contractual maturities because borrowers may have the right to prepay obligations before the underlying mortgages mature.

Note 4: Loans and Related Allowance for Credit Losses

Table 4.1 presents total loans outstanding by portfolio segment and class of financing receivable. Outstanding balances include unearned income, net deferred loan fees or costs, and unamortized discounts and premiums. These amounts were less than 1% of our total loans outstanding at June 30, 2021, and December 31, 2020.

Outstanding balances exclude accrued interest receivable on loans, except for certain revolving loans, such as credit card loans.

See Note 7 (Other Assets) for additional information on accrued interest receivable. Amounts considered to be uncollectible are reversed through interest income. During the first half of 2021, we reversed accrued interest receivable of \$24 million for our commercial portfolio segment and \$104 million for our consumer portfolio segment, compared with \$21 million and \$114 million, respectively, for the same period a year ago.

Table 4.1: Loans Outstanding

(in millions)	Jun 30, 2021	Dec 31, 2020
Commercial:		
Commercial and industrial	\$ 317,618	318,805

Commitments to Lend

A commitment to lend is a legally binding agreement to lend to a customer, usually at a stated interest rate, if funded, and for specific purposes and time periods. We generally require a fee to extend such commitments. Certain commitments are subject to loan agreements with covenants regarding the financial performance of the customer or borrowing base formulas on an ongoing basis that must be met before we are required to fund the commitment. We may reduce or cancel consumer commitments, including home equity lines and credit card lines, in accordance with the contracts and applicable law. For unconditionally cancelable commitments at our discretion, we do not recognize an ACL.

We may, as a representative for other lenders, advance funds or provide for the issuance of letters of credit under syndicated loan or letter of credit agreements. Any advances are generally repaid in less than a week and would normally require default of both the customer and another lender to expose us to loss. The unfunded amount of these temporary advance arrangements totaled approximately \$82.6 billion at June 30, 2021.

We issue commercial letters of credit to assist customers in purchasing goods or services, typically for international trade. At June 30, 2021, and December 31, 2020, we had \$1.4 billion and \$1.3 billion, respectively, of outstanding issued commercial letters of credit. We also originate multipurpose lending commitments under which borrowers have the option to draw on the facility for different purposes in one of several forms, including a standby letter of credit. See Note 11 (Guarantees and Other Commitments) for additional information on standby letters of credit.

When we enter into commitments, we are exposed to credit risk. The maximum credit risk for these commitments will generally be lower than the contractual amount because a significant portion of these commitments are not funded. We manage the potential risk in commitments to lend by limiting the total amount of commitments, both by individual customer and in total, by monitoring the size and maturity structure of these commitments and by applying the same credit standards for these commitments as for all of our credit activities.

For loans and commitments to lend, we generally require collateral or a guarantee. We may require various types of collateral, including commercial and consumer real estate, autos, other short-term liquid assets such as accounts receivable or inventory and long-lived assets, such as equipment and other business assets. Collateral requirements for each loan or commitment may vary based on the loan product and our assessment of a customer's credit risk according to the specific credit underwriting, including credit terms and structure.

The contractual amount of our unfunded credit commitments, including unissued standby and commercial letters of credit, is summarized by portfolio segment and class of financing receivable in Table 4.4. The table excludes the issued standby and commercial letters of credit and temporary advance arrangements described above.

Table 4.4: Unfunded Credit Commitments

(in millions)	Jun 30, 2021	Dec 31, 2020

Note 4: Loans and Related Allowance for Credit Losses (continued)

Allowance for Credit Losses

Table 4.5 presents the allowance for credit losses (ACL) for loans, which consists of the allowance for loan losses and the allowance

for unfunded credit commitments. The ACL for loans decreased \$3.3 billion from December 31, 2020, due to improvements in current and forecasted economic conditions.

Note 4: Loans and Related Allowance for Credit Losses (continued)

Credit Quality

We monitor credit quality by evaluating various attributes and utilize such information in our evaluation of the appropriateness of the ACL for loans. The following sections provide the credit quality indicators we most closely monitor. The credit quality indicators are generally based on information as of our financial statement date, with the exception of updated Fair Isaac Corporation (FICO) scores and updated loan-to-value (LTV)/combined LTV (CLTV). We obtain FICO scores at loan origination and the scores are generally updated at least quarterly, except in limited circumstances, including compliance with the Fair Credit Reporting Act (FCRA). Generally, the LTV and CLTV indicators are updated in the second month of each quarter, with updates no older than March 31, 2021.

COMMERCIAL CREDIT QUALITY INDICATORS We manage a consistent process for assessing commercial loan credit quality.

Commercial loans are generally subject to individual risk assessment using our internal borrower and collateral quality ratings, which is our primary credit quality indicator. Our ratings are aligned to regulatory definitions of pass and criticized categories with the criticized segmented among special mention, substandard, doubtful and loss categories.

Table 4.7 provides the outstanding balances of our commercial loan portfolio by risk category. Credit quality information is provided with the year of origination for term loans. Revolving loans may convert to term loans as a result of a contractual provision in the original loan agreement or if modified in a troubled debt restructuring (TDR). At June 30, 2021, we had \$442.6 billion and \$33.8 billion of pass and criticized commercial loans, respectively.

Table 4.7: Commercial Loan Categories by Risk Categories and Vintage

(in millions)	Term loans by origination year						Revolving loans	Revolving loans converted to term loans	Total

Table 4.8 provides past due information for commercial loans, which we monitor as part of our credit risk management practices; however, delinquency is not a primary credit quality indicator for commercial loans. Payment deferral activities

instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies for customers who otherwise would have moved into past due status.

CONSUMER CREDIT QUALITY INDICATORS We have various classes of consumer loans that present unique credit risks. Loan delinquency, FICO credit scores and LTV for residential mortgage loans are the primary credit quality indicators that we monitor and utilize in our evaluation of the appropriateness of the ACL for the consumer loan portfolio segment.

Many of our loss estimation techniques used for the ACL for loans rely on delinquency-based models; therefore, delinquency is an important indicator of credit quality in the establishment of our ACL for consumer loans.

Table 4.9 provides the outstanding balances of our consumer loan portfolio by delinquency status. Payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies for customers who otherwise would have moved into past due status.

Credit quality information is provided with the year of origination for term loans. Revolving loans may convert to term loans as a result of a contractual provision in the original loan agreement or if modified in a TDR. The revolving loans converted to term loans in the credit card loan category represent credit card loans with modified terms that require payment over a specific term.

(1) Represents loans whose repayments are predominantly insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA). Loans insured/guaranteed by the FHA/VA and 90+ DPD totaled \$6.1 billion and \$11.1 billion at June 30, 2021, and December 31, 2020, respectively.

Of the \$2.9 billion of consumer loans not government insured/guaranteed that are 90 days or more past due at June 30, 2021, \$460 million was accruing, compared with

\$2.7 billion past due and \$612 million accruing at December 31, 2020.

Note 4: Loans and Related Allowance for Credit Losses (continued)

Table 4.10 provides the outstanding balances of our consumer loan portfolio by FICO score. Substantially all of the scored consumer portfolio has an updated FICO score of 680 and above, reflecting a strong current borrower credit profile. FICO scores are not available for certain loan types or may not be required if we deem it unnecessary due to strong collateral and

other borrower attributes. Loans not requiring a FICO score totaled \$15.9 billion and \$13.2 billion at June 30, 2021, and December 31, 2020, respectively. Substantially all loans not requiring a FICO score are securities-based loans originated through retail brokerage.

(1) Represents loans whose repayments are predominantly insured by the FHA or guaranteed by the VA.

LTV refers to the ratio comparing the loan's unpaid principal balance to the property's collateral value. CLTV refers to the combination of first lien mortgage and junior lien mortgage (including unused line amounts for credit line products) ratios. LTVs and CLTVs are updated quarterly using a cascade approach which first uses values provided by automated valuation models (AVMs) for the property. If an AVM is not available, then the

value is estimated using the original appraised value adjusted by the change in Home Price Index (HPI) for the property location. If an HPI is not available, the original appraised value is used. The HPI value is normally the only method considered for high value properties, generally with an original value of \$1 million or more, as the AVM values have proven less accurate for these properties.

Note 4: Loans and Related Allowance for Credit Losses (continued)

Table 4.11 shows the most updated LTV and CLTV distribution of the residential mortgage – first lien and residential mortgage – junior lien loan portfolios. We consider the trends in residential real estate markets as we monitor credit risk and establish our ACL. In the event of a default, any loss should be

limited to the portion of the loan amount in excess of the net realizable value of the underlying real estate collateral value. Certain loans do not have an LTV or CLTV due to industry data availability and portfolios acquired from or serviced by other institutions.

(1) Reflects total loan balances with LTV/CLTV amounts in excess of 100%. In the event of default, the loss content would generally be limited to only the amount in excess of 100% LTV/CLTV.

(2) Represents loans whose repayments are predominantly insured by the FHA or guaranteed by the VA.

NONACCRUAL LOANS Table 4.12 provides loans on nonaccrual status. In connection with our adoption of CECL, nonaccrual loans may have an ACL or a negative allowance for credit losses from expected recoveries of amounts previously written off. Payment

deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies for customers who otherwise would have moved into nonaccrual status.

Table 4.12: Nonaccrual Loans

(1) Nonaccrual loans may not have an allowance for credit losses if the loss expectations are zero given solid collateral value.

LOANS IN PROCESS OF FORECLOSURE Our recorded investment in consumer mortgage loans collateralized by residential real estate property that are in process of foreclosure was \$939 million and \$2.1 billion at June 30, 2021, and December 31, 2020, respectively, which included \$650 million and \$1.7 billion, respectively, of loans that are government insured/guaranteed. Under the Consumer Financial Protection Bureau guidelines, we do not commence the foreclosure process on residential mortgage loans until after the loan is 120 days delinquent. Foreclosure procedures and timelines vary depending on whether the property address resides in a judicial or non-judicial state. Judicial states require the foreclosure to be processed through the state's courts while non-judicial states are processed without court intervention. Foreclosure timelines vary according to state law. In connection with our actions to support customers during the COVID-19 pandemic, we have suspended certain mortgage foreclosure activities.

Note 4: Loans and Related Allowance for Credit Losses (continued)

LOANS 90 DAYS OR MORE PAST DUE AND STILL ACCRUING Certain loans 90 days or more past due are still accruing, because they are (1) well-secured and in the process of collection or (2) residential mortgage or consumer loans exempt under regulatory rules from being classified as nonaccrual until later delinquency, usually 120 days past due.

Table 4.13 shows loans 90 days or more past due and still accruing by class for loans not government insured/guaranteed.

(1) Represents loans whose repayments are predominantly insured by the FHA or guaranteed by the VA.

TROUBLED DEBT RESTRUCTURINGS (TDRs) When, for economic or legal reasons related to a borrower's financial difficulties, we grant a concession for other than an insignificant period of time to a borrower that we would not otherwise consider, the related loan is classified as a TDR, the balance of which totaled \$12.5 billion and \$14.5 billion at June 30, 2021, and December 31, 2020, respectively. We do not consider loan resolutions such as foreclosure or short sale to be a TDR. In addition, COVID-related modifications are generally not classified as TDRs due to the relief under the CARES Act and the Interagency Statement. For additional information on the TDR relief, see Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K.

We may require some consumer borrowers experiencing financial difficulty to make trial payments generally for a period of three to four months, according to the terms of a planned permanent modification, to determine if they can perform according to those terms. These arrangements represent trial modifications, which we classify and account for as TDRs. While loans are in trial payment programs, their original terms are not considered modified and they continue to advance through delinquency status and accrue interest according to their original terms.

Commitments to lend additional funds on loans whose terms have been modified in a TDR amounted to \$344 million and \$489 million at June 30, 2021, and December 31, 2020, respectively.

Table 4.14 summarizes our TDR modifications for the periods presented by primary modification type and includes the financial effects of these modifications. For those loans that modify more than once, the table reflects each modification that occurred during the period. Loans that both modify and are paid off or written-off within the period, as well as changes in recorded investment during the period for loans modified in prior periods, are not included in the table.

- (1) Amounts represent the recorded investment in loans after recognizing the effects of the TDR, if any. TDRs may have multiple types of concessions, but are presented only once in the first modification type based on the order presented in the table above. The reported amounts include loans remodified of \$202 million and \$221 million for the quarters ended June 30, 2021 and 2020, respectively, and \$458 million and \$484 million for the first half of 2021 and 2020, respectively.
- (2) Other concessions include loans with payment (principal and/or interest) deferral, loans discharged in bankruptcy, loan renewals, term extensions and other interest and noninterest adjustments, but exclude modifications that also forgive principal and/or reduce the contractual interest rate. The reported amounts include COVID-related payment deferrals that are new TDRs and exclude COVID-related payment deferrals previously reported as TDRs given limited current financial effects other than payment deferral.
- (3) Charge-offs include write-downs of the investment in the loan in the period it is contractually modified. The amount of charge-off will differ from the modification terms if the loan has been charged down prior to the modification based on our policies. In addition, there may be cases where we have a charge-off/down with no legal principal modification.
- (4) Recorded investment related to interest rate reduction reflects the effect of reduced interest rates on loans with an interest rate concession as one of their concession types, which includes loans reported as a principal primary modification type that also have an interest rate concession.
- (5) Trial modifications are granted a delay in payments due under the original terms during the trial payment period. However, these loans continue to advance through delinquency status and accrue interest according to their original terms. Any subsequent permanent modification generally includes interest rate related concessions; however, the exact concession type and resulting financial effect are usually not known until the loan is permanently modified. Trial modifications for the period are presented net of previously reported trial modifications that became permanent in the current period.

Table 4.15 summarizes permanent modification TDRs that have defaulted in the current period within 12 months of their permanent modification date. We are reporting these defaulted

TDRs based on a payment default definition of 90 days past due for the commercial portfolio segment and 60 days past due for the consumer portfolio segment.

Table 4.15: Defaulted TDRs

Note 5: Leasing Activity

The information below provides a summary of our leasing activities as a lessor and lessee. See Note 5 (Leasing Activity) in our 2020 Form 10-K for additional information about our leasing activities.

As a Lessor

Noninterest income on leases, which is presented in Table 5.1, is included in other noninterest income on our consolidated statement of income. Lease expense, included in other noninterest expense on our consolidated statement of income, was \$226 million and \$244 million for the quarters ended June 30, 2021 and 2020, respectively, and \$452 million and \$504 million for the first half of 2021 and 2020, respectively.

Table 5.1: Leasing Revenue

(in millions)	Quarter ended June 30,		Six months ended June 30,

(1) Represents securities held as part of our customer accommodation trading activities. For additional information on these activities, see Note 2 (Trading Activities).

(2) Substantially all of these securities are economically hedged with equity derivatives.

(3) In second quarter 2021, we elected to change our accounting method for low-income housing tax credit investments and elected to change the presentation of investment tax credits related to solar energy investments. Prior period balances have been revised to conform with the current period presentation. For additional information, see Note 1 (Summary of Significant Accounting Policies).

(4) Substantially all relates to investments in Federal Reserve Bank stock at both June 30, 2021, and December 31, 2020.

(5) Represents nonmarketable equity securities accounted for under the measurement alternative, which were predominantly securities associated with our affiliated venture capital business.

Low-Income Housing Tax Credit Investments

We invest in affordable housing projects that qualify for the low-income housing tax credit (LIHTC), which are designed to promote private development of low-income housing. These investments typically generate a return through the realization of tax credits and other tax benefits. Table 6.2 summarizes the amortization of the investments and the related tax credits and other tax benefits that are recognized in income tax expense/ (benefit) on our consolidated statement of income. We are

periodically required to provide additional financial support during the investment period. A liability is recognized for unfunded commitments that are both legally binding and probable of funding. These commitments are predominantly funded within three years of initial investment. Our liability for these unfunded commitments was \$4.2 billion at both June 30, 2021, and December 31, 2020. This liability for unfunded commitments is included in long-term debt on our consolidated balance sheet.

Table 6.2: LIHTC Investments (1)

(in millions)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Proportional amortization of investments	\$ 382	352	764	703
Tax credits and other tax benefits	(431)	(401)	(875)	(797)

Other	12,135	11,768
Total other assets	\$ 72,453	87,337

Note 8: Securitizations and Variable Interest Entities

Involvement with Variable Interest Entities (VIEs)

In the normal course of business, we enter into various types of on- and off-balance sheet transactions with special purpose entities (SPEs), which are corporations, trusts, limited liability companies or partnerships that are established for a limited purpose. SPEs are often formed in connection with securitization transactions whereby financial assets are transferred to an SPE. SPEs formed in connection with securitization transactions are generally considered variable interest entities (VIEs). The VIE may alter the risk profile of the asset by entering into derivative transactions or obtaining credit support, and issues various forms of interests in those assets to investors. When we transfer financial assets from our consolidated balance sheet to a VIE in connection with a securitization, we typically receive cash and sometimes other interests in the VIE as proceeds for the assets we transfer. In certain transactions with VIEs, we may retain the right to service the transferred assets and repurchase the transferred assets if the outstanding balance of the assets falls below the level at which the cost to service the assets exceed the benefits. In addition, we may purchase the right to service loans transferred to a VIE by a third party.

In connection with our securitization or other VIE activities, we have various forms of ongoing involvement with VIEs, which may include:

- underwriting securities issued by VIEs and subsequently making markets in those securities;
- providing credit enhancement on securities issued by VIEs through the use of letters of credit or financial guarantees;
- entering into other derivative contracts with VIEs;
- holding senior or subordinated interests in VIEs;
- acting as servicer or investment manager for VIEs;
- providing administrative or trustee services to VIEs; and
- providing seller financing to VIEs.

Loan Sales and Securitization Activity

We periodically transfer consumer and commercial loans and other types of financial assets in securitization and whole loan sale transactions.

MORTGAGE LOANS SOLD TO U.S. GOVERNMENT SPONSORED ENTITIES AND TRANSACTIONS WITH GINNIE MAE In the normal course of business we sell originated and purchased residential and commercial mortgage loans to government-sponsored entities (GSEs). These loans are generally transferred into securitizations sponsored by the GSEs, which provide certain credit guarantees to investors and servicers. We also transfer mortgage loans into securitizations pursuant to Government National Mortgage Association (GNMA) guidelines which are insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA). Mortgage loans eligible for securitization with the GSEs or GNMA are considered conforming loans. The GSEs or GNMA design the structure of these securitizations, sponsor the involved VIEs, and have power over the activities most significant to the VIE.

We account for loans transferred in conforming mortgage loan securitization transactions as sales and do not consolidate the VIEs as we are not the primary beneficiary. In exchange for the transfer of loans, we typically receive securities issued by the VIEs which we sell to third parties for cash or hold for investment purposes as HTM or AFS securities. We also retain servicing rights on the transferred loans. As a servicer, we retain the option

to repurchase loans from GNMA loan securitization pools, which becomes exercisable when three scheduled loan payments remain unpaid by the borrower. We repurchased loans of \$1.0 billion and \$2.9 billion, during the second quarter and first half of 2021, respectively, and \$3.6 billion and \$5.1 billion during the second quarter and first half of 2020, respectively, which predominantly represented repurchases of government insured loans. We recorded assets and related liabilities of \$128 million and \$176 million at June 30, 2021, and December 31, 2020, respectively, where we did not exercise our option to repurchase eligible loans.

Upon transfers of loans, we also provide indemnification for losses incurred due to material breaches of contractual representations and warranties, as well as other recourse arrangements. At June 30, 2021, and December 31, 2020, our liability associated with these provisions was \$201 million and \$221 million, respectively, and the maximum exposure to loss was \$13.4 billion and \$13.7 billion, respectively.

Off-balance sheet mortgage loans sold or securitized presented in Table 8.5 are predominantly loans securitized by the GSEs and GNMA. See Note 9 (Mortgage Banking Activities) for additional information about residential and commercial servicing rights, advances and servicing fees. Substantially all residential servicing activity is related to assets transferred to GSE and GNMA securitizations.

NONCONFORMING MORTGAGE LOAN SECURITIZATIONS In the normal course of business, we sell nonconforming residential and commercial mortgage loans in securitization transactions that we design and sponsor. Nonconforming mortgage loan securitizations do not involve a government credit guarantee, and accordingly, beneficial interest holders are subject to credit risk of the underlying assets held by the securitization VIE. We typically originate the transferred loans, account for the transfers as sales and do not consolidate the VIE. We also typically retain the right to service the loans and may hold other beneficial interests issued by the VIEs, such as debt securities held for investment purposes. Our servicing role related to nonconforming commercial mortgage loan securitizations is limited to primary or master servicer and the most significant decisions impacting the performance of the VIE are generally made by the special servicer or the controlling class security holder. For our residential nonconforming mortgage loan securitizations accounted for as sales, we either do not hold variable interests that we consider potentially significant or are not the primary servicer for a majority of the VIE assets.

WHOLE LOAN SALE TRANSACTIONS We also sell whole loans to VIEs where we have continuing involvement in the form of financing. We account for these transfers as sales, and do not consolidate the VIEs as we do not have the power to direct the most significant activities of the VIEs.

Table 8.1 presents information about transfers of assets during the period for which we recorded the transfers as sales and have continuing involvement with the transferred assets. In connection with these transfers, we received proceeds and recorded servicing assets, securities, and loans. Substantially all transfers were related to residential mortgage securitizations with the GSEs or GNMA and resulted in no gain or loss because the loans were already measured at fair value on a recurring basis. Each of these interests are initially measured at fair value.

Servicing rights are classified as Level 3 measurements, and generally securities are classified as Level 2.

Table 8.1: Transfers with Continuing Involvement

(in millions)	2021		2020	
	Residential mortgages	Commercial mortgages	Residential mortgages	Commercial mortgages
Quarter ended June 30,				
Assets sold	\$ 45,903	5,173	43,602	2,505
Proceeds from transfer (1)	46,230	5,227	43,605	2,569
Net gains (losses) on sale	327	54	3	64
Continuing involvement (2):				
Servicing rights recognized	\$ 487	24	443	48
Securities recognized (3)	6,171	39	590	12
Loans recognized	—	—	—	—
Six months ended June 30,				
Asset balances sold	\$ 86,489	8,364	81,987	5,233
Proceeds from transfer (1)	86,921	8,509	82,025	5,366
Net gains (losses) on sale	432	145	38	133
Continuing involvement (2):				
Servicing rights recognized	\$ 894	71	889	82
Securities recognized (3)	16,394	68	590	74
Loans recognized	926	—	—	—

- (1) Represents cash proceeds and the fair value of non-cash beneficial interests recognized at securitization settlement. Prior periods have been revised to conform with the current period presentation.
(2) Represents assets or liabilities recognized at securitization settlement date related to our continuing involvement in the transferred assets.
(3) Represents debt securities obtained at securitization settlement held for investment purposes that are classified as available-for-sale or held-to-maturity, which predominantly relate to agency securities. Excludes trading debt securities held temporarily for market-marking purposes, which are sold to third parties at or shortly after securitization settlement, of \$11.2 billion and \$18.0 billion during the second quarter and first half of 2021, respectively, and \$9.4 billion and \$17.1 billion during the second quarter and first half of 2020, respectively.

In the normal course of business we purchase certain non-agency securities at initial securitization or subsequently in the secondary market. We also provide seller financing in the form of loans. We received cash flows of \$3.0 billion and \$3.1 billion during the second quarter and first half of 2021, respectively, and \$44 million and \$117 million during the second quarter and first half of 2020, respectively, related to principal and interest payments on these securities and loans.

Table 8.2 presents the key weighted-average assumptions we used to initially measure residential MSR recognized during the periods presented.

Table 8.2: Residential Mortgage Servicing Rights

	2021	2020
Quarter ended June 30,		
Prepayment speed (1)	13.4 %	15.0
Discount rate	6.1	7.0
Cost to service (\$ per loan) (2)	\$ 91	97
Six months ended June 30,		
Prepayment speed (1)	13.8 %	14.0
Discount rate	6.0	6.8
Cost to service (\$ per loan) (2)	\$ 87	94

- (1) The prepayment speed assumption for residential MSR includes a blend of prepayment speeds and default rates. Prepayment speed assumptions are influenced by mortgage interest rate inputs as well as our estimation of drivers of borrower behavior.
(2) Includes costs to service and unreimbursed foreclosure costs, which can vary period to period due to changes in model assumptions and the mix of modified government-guaranteed loans sold to GNMA.

See Note 15 (Fair Values of Assets and Liabilities) and Note 9 (Mortgage Banking Activities) for additional information on key economic assumptions for residential MSR.

SALE OF STUDENT LOAN PORTFOLIO In the second quarter and first half of 2021, we sold \$3.9 billion and \$9.5 billion of student loans, servicing-released, respectively. For the same periods, we received \$4.0 billion and \$9.8 billion in proceeds from the sales, respectively, and recognized \$147 million and \$355 million of gains, respectively, which are included in other noninterest income on our consolidated statement of income. In connection with the sales, we provided \$1.6 billion and \$3.8 billion of collateralized loan financing to a third-party sponsored VIE in the second quarter and first half of 2021, respectively. The loans are measured at amortized cost and are classified in loans on the consolidated balance sheet. The collateral supporting our loan includes the student loans we sold. We do not consolidate the VIE as we do not have power over the significant activities of the entity.

RESECURITIZATION ACTIVITIES We enter into resecuritization transactions as part of our trading activities to accommodate the investment and risk management activities of our customers. In our resecuritization transactions, we transfer trading debt securities to VIEs in exchange for new beneficial interests that are sold to third parties at or shortly after securitization settlement. This activity is performed for customers seeking a specific return or risk profile. Substantially all of our transactions involve the resecuritization of conforming mortgage-backed securities issued by the GSEs or GNMA. We do not consolidate the resecuritization VIEs as we share in the decision-making power with third parties and do not hold significant economic interests in the VIEs other than for market-making activities. Table 8.3 presents information about assets transferred to resecuritization VIEs and Table 8.4 presents information about our resecuritization VIEs.

Note 8: Securitizations and Variable Interest Entities (continued)

Table 8.3: Transfers to Resecuritization VIEs

(in millions)	2021	2020
Quarter ended June 30,

Securities recognized	915	815

Table 8.4: Resecuritization VIEs

(in millions)	Jun 30, 2021	Dec 31, 2020
Total VIE assets	\$ 125,543	130,446
Carrying value of securities	1,137	1,461

Table 8.5: Off-Balance Sheet Loans Sold or Securitized

(in millions)	Total loans		Delinquent loans and foreclosed assets (1)		Net charge-offs (2)	
	Jun 30, 2021	Dec 31, 2020	Jun 30, 2021	Dec 31, 2020	Six months ended June 30,	
					2021	2020
Commercial	\$ 116,704	114,134	2,363	2,217	122	83
Residential	738,698	818,886	20,869	29,962	12	59
Total off-balance sheet sold or securitized loans (3)	\$ 855,402	933,020	23,232	32,179	134	142

(1) Includes \$203 million and \$394 million of commercial foreclosed assets and \$163 million and \$204 million of residential foreclosed assets at June 30, 2021, and December 31, 2020, respectively.

(2) Net charge-offs exclude loans sold to FNMA, FHLMC and GNMA as we do not service or manage the underlying real estate upon foreclosure and, as such, do not have access to net charge-off information.

(3) At June 30, 2021, and December 31, 2020, the table includes total loans of \$784.3 billion and \$864.8 billion, delinquent loans of \$19.8 billion and \$28.5 billion, and foreclosed assets of \$124 million and \$152 million, respectively, for FNMA, FHLMC and GNMA.

Transactions with Unconsolidated VIEs

MORTGAGE LOAN SECURITIZATIONS Table 8.6 includes nonconforming mortgage loan securitizations where we originate and transfer the loans to the unconsolidated securitization VIEs that we sponsor. For additional information about these VIEs, see the "Loan Sales and Securitization Activity" section within this Note. Nonconforming mortgage loan securitizations also include commercial mortgage loan securitizations sponsored by third parties where we did not originate or transfer the loans but serve as master servicer and invest in securities that could be potentially significant to the VIE.

Conforming loan securitization and resecuritization transactions involving the GSEs and GNMA are excluded from Table 8.6 because we are not the sponsor or we do not have power over the activities most significant to the VIEs. Additionally, due to the nature of the guarantees provided by the GSEs and the FHA and VA, our credit risk associated with these VIEs is limited. For additional information about conforming mortgage loan securitizations and resecuritizations, see the "Loan Sales and Securitization Activity" and "Resecuritization Activities" sections within this Note.

TAX CREDIT STRUCTURES We co-sponsor and make investments in affordable housing and sustainable energy projects that are designed to generate a return primarily through the realization of federal tax credits. The projects are typically managed by project sponsors who have the power over the VIE's assets. In some instances, our investments in these structures may require that we fund future capital commitments at the discretion of the project sponsors.

Off-Balance Sheet Loans

Table 8.5 presents information about the principal balances of off-balance sheet loans that were sold or securitized, including residential mortgage loans sold to the GSEs, GNMA and other investors, for which we have some form of continuing involvement (including servicer). Delinquent loans include loans 90 days or more past due and loans in bankruptcy, regardless of delinquency status. In accordance with applicable servicing guidelines, delinquency status continues to advance for loans with COVID-related payment deferrals. For loans sold or securitized where servicing is our only form of continuing involvement, we generally experience a loss only if we were required to repurchase a delinquent loan or foreclosed asset due to a breach in representations and warranties associated with our loan sale or servicing contracts.

COMMERCIAL REAL ESTATE LOANS We transfer purchased industrial development bonds and GSE credit enhancements to VIEs in exchange for beneficial interests. We own all of the beneficial interests and may also service the underlying mortgages that serve as collateral to the bonds. Prior to first quarter 2021, we consolidated these VIEs as we controlled the key decisions. During first quarter 2021, we amended the structures such that we no longer control the key decisions of the VIEs. The GSEs have the power to direct the servicing and workout activities of the VIE in the event of a default. As a result, we deconsolidated the VIEs during first quarter 2021, and recognized the beneficial interests at fair value on our consolidated balance sheet.

OTHER VIE STRUCTURES We engage in various forms of structured finance arrangements with other VIEs, including collateralized debt obligations, asset-backed finance structures and other securitizations collateralized by asset classes other than mortgages. Collateral may include rental properties, asset-backed securities, student loans, mortgage loans and auto loans. We may participate in structuring or marketing the arrangements, as well as provide financing, service one or more of the underlying assets, or enter into derivatives with the VIEs. We may also receive fees for those services. We are not the primary beneficiary of these structures because we do not have power to direct the most significant activities of the VIEs.

Table 8.6 provides a summary of our exposure to the unconsolidated VIEs described above, which includes investments in securities, loans, guarantees, liquidity agreements, commitments and certain derivatives. We exclude certain transactions with unconsolidated VIEs when our continuing involvement is temporary or administrative in nature or insignificant in size.

In Table 8.6, “Total VIE assets” represents the remaining principal balance of assets held by unconsolidated VIEs using the most current information available. For VIEs that obtain exposure to assets synthetically through derivative instruments, the notional amount of the derivative is included in the asset balance. “Carrying value” is the amount in our consolidated balance sheet related to our involvement with the unconsolidated VIEs. “Maximum exposure to loss” is determined as the carrying value of our investment in the VIEs excluding the unconditional repurchase options that have not been exercised, plus the remaining undrawn liquidity and lending commitments, the notional amount of net written derivative contracts, and

generally the notional amount of, or stressed loss estimate for, other commitments and guarantees.

Debt, guarantees and other commitments include amounts related to loans sold that we may be required to repurchase, or otherwise indemnify or reimburse the investor or insurer for losses incurred, due to material breach of contractual representations and warranties as well as other retained recourse arrangements. The maximum exposure to loss for material breach of contractual representations and warranties represents a stressed case estimate we utilize for determining stressed case regulatory capital needs and is considered to be a remote scenario.

“Maximum exposure to loss” represents estimated loss that would be incurred under severe, hypothetical circumstances, for which we believe the possibility is extremely remote, such as where the value of our interests and any associated collateral declines to zero, without any consideration of recovery or offset from any economic hedges. Accordingly, this disclosure is not an indication of expected loss.

Table 8.6: Unconsolidated VIEs

(in millions)	Total VIE assets	Carrying value – asset (liability)					
		Loans	Debt securities (1)	Equity securities	All other assets (2)	Debt and other liabilities	Net assets
June 30, 2021

Total	\$ 1,849	1,849	2,303	11,413	669	3,372	19,606

(1) Includes \$317 million and \$310 million of securities classified as trading at June 30, 2021, and December 31, 2020, respectively.

(2) All other assets includes mortgage servicing rights, derivative assets, and other assets (predominantly servicing advances).

(3) In second quarter 2021, we elected to change our accounting method for low-income housing tax credit investments. Prior period balances have been revised to conform with the current period presentation. For additional information, see Note 1 (Summary of Significant Accounting Policies).

Note 8: Securitizations and Variable Interest Entities (continued)

Consolidated VIEs

We consolidate VIEs where we are the primary beneficiary. We are the primary beneficiary of the following structure types:

COMMERCIAL AND INDUSTRIAL LOANS AND LEASES We securitize dealer floor plan loans and leases in a revolving master trust entity and hold the subordinated notes and residual equity interests. As servicer and residual interest holder, we control the key decisions of the trust and consolidate the entity. The total VIE assets held by the master trust represent a majority of the total VIE assets presented for this category in Table 8.7. In a separate transaction structure, we also provide the majority of debt and equity financing to an SPE that engages in lending and leasing to specific vendors and service the underlying collateral.

OTHER VIE STRUCTURES Other VIEs are primarily related to municipal tender option bond (MTOB) transactions and nonconforming mortgage loan securitizations that we sponsor. MTOBs are vehicles to finance the purchase of municipal bonds through the issuance of short-term debt to investors. Our involvement with MTOBs includes serving as the residual interest

holder, which provides control over the key decisions of the VIE, as well as the remarketing agent or liquidity provider related to the debt issued to investors. We also securitize nonconforming mortgage loans, in which our involvement includes servicer of the underlying assets and holder of subordinate or senior securities issued by the VIE.

Table 8.7 presents a summary of financial assets and liabilities of our consolidated VIEs. The carrying value represents assets and liabilities recorded on our consolidated balance sheet. Carrying values of assets are presented using GAAP measurement methods, which may include fair value, credit impairment or other adjustments, and therefore in some instances will differ from "Total VIE assets." For VIEs that obtain exposure synthetically through derivative instruments, the notional amount of the derivative is included in "Total VIE assets."

On our consolidated balance sheet, we separately disclose (1) the consolidated assets of certain VIEs that can only be used to settle the liabilities of those VIEs, and (2) the consolidated liabilities of certain VIEs for which the VIE creditors do not have recourse to Wells Fargo.

Table 8.7: Transactions with Consolidated VIEs

(in millions)	Total VIE assets	Carrying value – asset (liability)				
		Loans	Debt securities (1)	All other assets (2)	Long-term debt	All other liabilities (3)
June 30, 2021						
Commercial and industrial loans and leases	\$ 6,981	3,623	—	238	—	(183)
Commercial real estate loans (4)	—	—	—	—	—	—
Other	1,138	452	518	96	(178)	(404)
Total consolidated VIEs	\$ 8,119	4,075	518	334	(178)	(587)
December 31, 2020						
Commercial and industrial loans and leases	\$ 6,987	5,005	—	223	—	(200)
Commercial real estate loans (4)	5,369	5,357	—	12	—	—
Other	1,627	507	967	75	(203)	(900)
Total consolidated VIEs	\$ 13,983	10,869	967	310	(203)	(1,100)

(1) Includes \$117 million and \$269 million of securities classified as trading at June 30, 2021, and December 31, 2020, respectively.

(2) All other assets includes cash and due from banks, interest-earning deposits with banks, derivative assets, equity securities, and other assets.

(3) All other liabilities includes short-term borrowings, derivative liabilities, and accrued expenses and other liabilities.

(4) For structure description, see the "Transactions with Unconsolidated VIEs" section within this Note. These consolidated VIEs were deconsolidated in first quarter 2021.

Other Transactions

In addition to the transactions included in the previous tables, we have used wholly-owned trust preferred security VIEs to issue debt securities or preferred equity exclusively to third-party investors. As the sole assets of the VIEs are receivables from us, we do not consolidate the VIEs even though we own all of the voting equity shares of the VIEs, have fully guaranteed the obligations of the VIEs, and may have the right to redeem the third-party securities under certain circumstances. In our consolidated balance sheet we reported the debt securities issued to the VIEs as long-term junior subordinated debt with a carrying value of \$381 million and \$704 million at June 30, 2021, and December 31, 2020, respectively. In second quarter 2021, we liquidated certain of our trust preferred security VIEs. As part of these liquidations, the preferred securities issued by the trusts were canceled and junior subordinated debentures with a total carrying value of \$332 million were distributed to the preferred security holders. See Note 16 (Preferred Stock) for additional information about trust preferred securities.

Certain money market funds are also excluded from the previous tables because they are exempt from the consolidation analysis. We voluntarily waived a portion of our management fees for these money market funds to maintain a minimum level of daily net investment income. The amount of fees waived was insignificant in the second quarter and first half of both 2021 and 2020.

Note 9: Mortgage Banking Activities

Mortgage banking activities consist of residential and commercial mortgage originations, sales and servicing.

We apply the amortization method to commercial MSR and apply the fair value method to residential MSRs. The amortized

cost of commercial MSRs was \$1.3 billion and \$1.4 billion with an estimated fair value of \$1.5 billion and \$1.4 billion at June 30, 2021, and June 30, 2020, respectively. Table 9.1 presents the changes in MSRs measured using the fair value method.

Table 9.1: Analysis of Changes in Fair Value MSRs

(in millions)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Fair value, beginning of period	\$ 7,536	8,126	6,125	11,517
Servicing from securitizations or asset transfers (1)	485	462	891	923
Sales and other (2)	(7)	(1)	(8)	(32)
Net additions	478	461	883	891
Changes in fair value:				
Due to valuation inputs or assumptions:				
Mortgage interest rates (3)	(529)	(600)	1,101	(3,622)
Servicing and foreclosure costs (4)	—	(349)	9	(422)
Discount rates	160	—	207	27
Prepayment estimates and other (5)	(440)	(182)	(535)	(371)
Net changes in valuation inputs or assumptions	(809)	(1,131)	782	(4,388)
Changes due to collection/realization of expected cash flows (6)	(488)	(637)	(1,073)	(1,201)
Total changes in fair value	(1,297)	(1,768)	(291)	(5,589)
Fair value, end of period	\$ 6,717	6,819	6,717	6,819

(1) Includes impacts associated with exercising cleanup calls on securitizations and our right to repurchase delinquent loans from GNMA loan securitization pools. MSRs may increase upon repurchase due to servicing liabilities associated with these delinquent GNMA loans.

(2) Includes sales and transfers of MSRs, which can result in an increase in MSRs if related to portfolios with servicing liabilities.

(3) Includes prepayment speed changes as well as other valuation changes due to changes in mortgage interest rates.

(4) Includes costs to service and unreimbursed foreclosure costs.

(5) Represents other changes in valuation model inputs or assumptions including prepayment speed estimation changes that are independent of mortgage interest rate changes.

(6) Represents the reduction in the MSR fair value for the cash flows expected to be collected during the period, net of income accreted due to the passage of time.

Table 9.2 provides key economic assumptions and sensitivity of the current fair value of residential MSRs to immediate adverse changes in those assumptions. Amounts for residential MSRs include purchased servicing rights as well as servicing

rights resulting from the transfer of loans. See Note 15 (Fair Values of Assets and Liabilities) for additional information on key economic assumptions for residential MSRs.

Table 9.2: Economic Assumptions and Sensitivity of Residential MSRs

(\$ in millions, except cost to service amounts)	Jun 30, 2021	Dec 31, 2020
Fair value of interests held	\$ 6,717	6,125
Expected weighted-average life (in years)	4.2	3.7
Key economic assumptions:		
Prepayment speed assumption	17.2 %	19.9
Impact on fair value from 10% adverse change	\$ 417	434
Impact on fair value from 25% adverse change	967	1,002
Discount rate assumption	5.4 %	5.8
Impact on fair value from 100 basis point increase	\$ 274	229
Impact on fair value from 200 basis point increase	525	440
Cost to service assumption (\$ per loan)	111	130
Impact on fair value from 10% adverse change	171	181
Impact on fair value from 25% adverse change	427	454

The sensitivities in the preceding table are hypothetical and caution should be exercised when relying on this data. Changes in value based on variations in assumptions generally cannot be extrapolated because the relationship of the change in the assumption to the change in value may not be linear. Also, the effect of a variation in a particular assumption on the value of the other interests held is calculated independently without changing any other assumptions. In reality, changes in one factor may

result in changes in others, which might magnify or counteract the sensitivities.

Note 9: Mortgage Banking Activities (continued)

We present the components of our managed servicing portfolio in Table 9.3 at unpaid principal balance for loans serviced and subserviced for others and at book value for owned loans serviced.

Table 9.3: Managed Servicing Portfolio

(in billions)	Jun 30, 2021	Dec 31, 2020
Residential mortgage servicing:		
Serviced and subserviced for others	\$ 771	859
Owned loans serviced	284	323
Total residential servicing	1,055	1,182
Commercial mortgage servicing:		
Serviced and subserviced for others	584	583
Owned loans serviced	123	123
Total commercial servicing	707	706
Total managed servicing portfolio	\$ 1,762	1,888
Total serviced for others, excluding subserviced for others	\$ 1,344	1,431
MSRs as a percentage of loans serviced for others	0.60 %	0.52
Weighted average note rate (mortgage loans serviced for others)	3.93	4.03

At both June 30, 2021, and December 31, 2020, we had servicing advances, net of an allowance for uncollectible amounts, of \$3.4 billion. As the servicer of loans for others, we advance certain payments of principal, interest, taxes, insurance, and default-related expenses which are generally reimbursed within a short timeframe from cash flows from the trust, GSEs, insurer or borrower. The credit risk related to these advances is limited since the reimbursement is generally senior to cash payments to investors. We also advance payments of taxes and insurance for our owned loans which are collectible from the borrower. We

maintain an allowance for uncollectible amounts for advances on loans serviced for others that may not be reimbursed if the payments were not made in accordance with applicable servicing agreements or if the insurance or servicing agreements contain limitations on reimbursements. Servicing advances on owned loans are charged-off when deemed uncollectible.

Table 9.4 presents the components of mortgage banking noninterest income.

Table 9.4: Mortgage Banking Noninterest Income

(in millions)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Servicing fees:				
Contractually specified servicing fees, late charges and ancillary fees	\$ 692	749	1,416	1,614
Unreimbursed direct servicing costs (1)	(90)	(105)	(214)	(212)
Servicing fees	602	644	1,202	1,402
Amortization (2)	(33)	(100)	(98)	(166)
Changes due to collection/realization of expected cash flows (3)	(A) (488)	(637)	(1,073)	(1,201)
Net servicing fees	81	(93)	31	35
Changes in fair value of MSRs due to valuation inputs or assumptions (4)	(B) (809)	(1,131)	782	(4,388)
Net derivative gains (losses) from economic hedges (5)	707	535	(933)	3,935
Market-related valuation changes to MSRs, net of hedge results	(102)	(596)	(151)	(453)
Total servicing income, net	(21)	(689)	(120)	(418)
Net gains on mortgage loan originations/sales (6)	1,357	1,006	2,782	1,114
Total mortgage banking noninterest income	\$ 1,336	317	2,662	696
Total changes in fair value of MSRs carried at fair value	(A)+(B) (1,297)	(1,768)	(291)	(5,589)

(1) Includes costs associated with foreclosures, unreimbursed interest advances to investors, and other interest costs.

(2) Includes a \$37 million reversal of impairment recorded in the second quarter and first half of 2021, on the commercial amortized MSRs. Also, includes \$30 million impairment recorded in the second quarter and first half of 2020, on the commercial amortized MSRs.

(3) Represents the reduction in the MSR fair value for the cash flows expected to be collected during the period, net of income accreted due to the passage of time.

(4) Refer to the analysis of changes in fair value MSRs presented in Table 9.1 in this Note for more detail.

(5) See Note 14 (Derivatives) for additional discussion and detail on economic hedges.

(6) Includes net gains (losses) of \$(420) million and \$845 million in the second quarter and first half of 2021, respectively, and \$(393) million and \$(1.3) billion in the second quarter and first half of 2020, respectively, related to derivatives used as economic hedges of mortgage loans held for sale and derivative loan commitments.

Note 10: Intangible Assets

Table 10.1 presents the gross carrying value of intangible assets and accumulated amortization.

Table 10.1: Intangible Assets

(in millions)	June 30, 2021			December 31, 2020		
	Gross carrying value	Accumulated amortization	Net carrying value	Gross carrying value	Accumulated amortization	Net carrying value
Amortized intangible assets (1):						
MSRs (2)	\$ 4,690	(3,398)	1,292	4,612	(3,300)	1,312
Customer relationship and other intangibles	879	(592)	287	879	(551)	328
Total amortized intangible assets	\$ 5,569	(3,990)	1,579	5,491	(3,851)	1,640
Unamortized intangible assets:						
MSRs (carried at fair value)	\$ 6,717			6,125		
Goodwill	26,194			26,392		
Trademark	14			14		

(1) Balances are excluded commencing in the period following full amortization.

(2) Includes a \$5 million and \$37 million valuation allowance recorded for amortized MSRs at June 30, 2021, and December 31, 2020, respectively. See Note 9 (Mortgage Banking Activities) for additional information on MSRs.

Table 10.2 provides the current year and estimated future amortization expense for amortized intangible assets. We based our projections of amortization expense shown below on existing

asset balances at June 30, 2021. Future amortization expense may vary from these projections.

Table 10.2: Amortization Expense for Intangible Assets

(in millions)	Amortized MSRs	Customer relationship and other intangibles	Total
Six months ended June 30, 2021 (actual)	\$ 98	41	139
Estimate for the remainder of 2021	\$ 127	40	167
Estimate for year ended December 31,			
2022	232	68	300
2023	203	59	262
2024	177	48	225
2025	152	39	191
2026	117	32	149

In the first half of 2021, we announced agreements to sell Wells Fargo Asset Management and Corporate Trust Services and transferred the associated goodwill from the Wealth and Investment Management operating segment and the Commercial Banking operating segment, respectively, to

Corporate. Also in the first half of 2021, we recognized goodwill write-downs related to sales of the student loan portfolio and our Canadian equipment finance business. Table 10.3 shows the allocation of goodwill to our reportable operating segments.

Table 10.3: Goodwill

(in millions)	Consumer Banking and Lending	Commercial Banking	Corporate and Investment Banking	Wealth and Investment Management	Corporate	Consolidated Company

Foreign currency translation	—	3	—	—	—	3
Transfers of goodwill	—	(80)	—	(932)	1,012	—
June 30, 2021	\$ 16,418	2,941	5,375	344	1,116	26,194

Note 11: Guarantees and Other Commitments

Guarantees are contracts that contingently require us to make payments to a guaranteed party based on an event or a change in an underlying asset, liability, rate or index. Guarantees are generally in the form of standby and direct pay letters of credit,

written options, recourse obligations, and other types of similar arrangements. Table 11.1 shows carrying value, maximum exposure to loss on our guarantees and the related non-investment grade amounts.

Table 11.1: Guarantees – Carrying Value and Maximum Exposure to Loss

(in millions)	Carrying value of obligation (asset)	Maximum exposure to loss						
		Expires in one year or less	Expires after one year through three years	Expires after three years through five years	Expires after five years	Total	Non-investment grade	
June 30, 2021								
Standby letters of credit	\$ 132	12,639	4,838	1,927	457	19,861	6,873	
Direct pay letters of credit	10	1,927	2,544	368	43	4,882	1,140	
Written options (1)	(548)	12,943	6,278	723	58	20,002	13,666	
Loans and LHFS sold with recourse (2)	30	89	826	3,010	9,323	13,248	11,216	
Exchange and clearing house guarantees	—	—	—	—	5,243	5,243	—	
Other guarantees and indemnifications (3)	1	629	3	—	239	871	570	
Total guarantees	\$ (375)	28,227	14,489	6,028	15,363	64,107	33,465	
December 31, 2020								
Standby letters of credit	\$ 156	11,977	4,962	1,897	433	19,269	7,528	
Direct pay letters of credit	18	2,256	2,746	531	39	5,572	1,102	
Written options (1)	(538)	12,735	7,972	889	58	21,654	13,394	
Loans and LHFS sold with recourse (2)	33	177	819	1,870	9,723	12,589	10,332	
Exchange and clearing house guarantees	—	—	—	—	5,510	5,510	—	
Other guarantees and indemnifications (3)	—	734	1	1	1,414	2,150	590	
Total guarantees	\$ (331)	27,879	16,500	5,188	17,177	66,744	32,946	

- (1) Written options, which are in the form of derivatives, are also included in the derivative disclosures in Note 14 (Derivatives). Carrying value net asset position is a result of certain deferred premium option trades.
- (2) Represents recourse provided, all to the GSEs, on loans sold under various programs and arrangements.
- (3) Includes indemnifications provided to certain third-party clearing agents. Estimated maximum exposure to loss was \$210 million and \$1.4 billion with related collateral of \$2.1 billion and \$1.2 billion as of June 30, 2021, and December 31, 2020, respectively.

“Maximum exposure to loss” and “Non-investment grade” are required disclosures under GAAP. Maximum exposure to loss represents the estimated loss that would be incurred under an assumed hypothetical circumstance, despite what we believe is a remote possibility, where the value of our interests and any associated collateral declines to zero. Maximum exposure to loss estimates in Table 11.1 do not reflect economic hedges or collateral we could use to offset or recover losses we may incur under our guarantee agreements. Accordingly, this required disclosure is not an indication of expected loss. We believe the carrying value is more representative of our exposure to loss than maximum exposure to loss. The carrying value represents the fair value of the guarantee, if any, and also includes an ACL for guarantees, if applicable.

Non-investment grade represents those guarantees on which we have a higher risk of performance under the terms of the guarantee. If the underlying assets under the guarantee are non-investment grade (that is, an external rating that is below investment grade or an internal credit default grade that is equivalent to a below investment grade external rating), we consider the risk of performance to be high. Internal credit default grades are determined based upon the same credit policies that we use to evaluate the risk of payment or performance when making loans and other extensions of credit. Credit quality indicators we usually consider in evaluating risk of payments or performance are described in Note 4 (Loans and Related Allowance for Credit Losses).

MERCHANT PROCESSING SERVICES We provide debit and credit card transaction processing services through payment networks directly for merchants and as a sponsor for merchant processing servicers, including our joint venture with a third party that is accounted for as an equity method investment. In our role as the merchant acquiring bank, we have a potential obligation in connection with payment and delivery disputes between the merchant and the cardholder that are resolved in favor of the cardholder. If we are unable to collect the amounts from the merchant, we incur a loss for the refund to the cardholder. We are secondarily obligated to make a refund for transactions involving sponsored merchant processing servicers. We generally have a low likelihood of loss in connection with our merchant processing services because most products and services are delivered when purchased and amounts are generally refunded when items are returned to the merchant. In addition, we may reduce our risk in connection with these transactions by withholding future payments and requiring cash or other collateral. For the first half of 2021, we processed card transaction volume of \$790.2 billion as a merchant acquiring bank, and related losses, including those from our joint venture entity, were immaterial.

GUARANTEES OF SUBSIDIARIES In the normal course of business, the Parent may provide counterparties with guarantees related to its subsidiaries' obligations. These obligations are included in the Company's consolidated balance sheet or are reflected as off-balance sheet commitments, and therefore, the Parent has not recognized a separate liability for these guarantees.

The Parent fully and unconditionally guarantees the payment of principal, interest, and any other amounts that may be due on securities that its 100% owned finance subsidiary, Wells Fargo Finance LLC, may issue. These securities are not guaranteed by any other subsidiary of the Parent. The guaranteed liabilities were \$1.6 billion and \$2.3 billion at June 30, 2021, and December 31, 2020, respectively. These guarantees rank on parity with all of the Parent's other unsecured and unsubordinated indebtedness. The assets of the Parent consist primarily of equity in its subsidiaries, and the Parent is a separate and distinct legal entity from its subsidiaries. As a result, the Parent's ability to address claims of holders of these debt securities against the Parent under the guarantee depends on the Parent's receipt of dividends, loan payments and other funds from its subsidiaries. If any of the Parent's subsidiaries becomes insolvent, the direct creditors of that subsidiary will have a prior claim on that subsidiary's assets. The rights of the Parent and the rights of the Parent's creditors will be subject to that prior claim unless the Parent is also a direct creditor of that subsidiary. For additional information regarding other restrictions on the Parent's ability to receive dividends, loan payments and other funds from its subsidiaries, see Note 23 (Regulatory Capital Requirements and Other Restrictions).

OTHER COMMITMENTS To meet the financing needs of our customers, we may enter into commitments to purchase debt and equity securities to provide capital for their funding, liquidity or other future needs. As of both June 30, 2021, and December 31, 2020, we had commitments to purchase debt securities of \$18 million and commitments to purchase equity securities of \$3.2 billion.

As part of maintaining our memberships in certain clearing organizations, we are required to stand ready to provide liquidity to sustain market clearing activity in the event unforeseen events occur or are deemed likely to occur. Certain of these obligations are guarantees of other members' performance and accordingly are included in Table 11.1 in Other guarantees and indemnifications.

Also, we have commitments to purchase loans and securities under resale agreements from certain counterparties, including central clearing organizations. The amount of our unfunded contractual commitments was \$12.9 billion and \$12.0 billion as of June 30, 2021, and December 31, 2020, respectively.

Given the nature of these commitments, they are excluded from Table 4.4 (Unfunded Credit Commitments) in Note 4 (Loans and Related Allowance for Credit Losses).

Note 12: Pledged Assets and Collateral

Pledged Assets

Table 12.1 provides the carrying amount of on-balance sheet pledged assets and the fair value of other pledged collateral. Other pledged collateral is collateral we have received from third parties, have the right to repledge and is not recognized on our consolidated balance sheet.

TRADING RELATED ACTIVITY Our trading businesses may pledge debt and equity securities in connection with securities sold under agreements to repurchase (repurchase agreements) and securities lending arrangements. The collateral that we pledge related to our trading activities may include our own collateral as well as collateral that we have received from third parties and have the right to repledge. All of the collateral we pledge related to trading activity is eligible to be repledged or sold by the secured party.

NON-TRADING RELATED ACTIVITY As part of our liquidity management strategy, we may pledge loans, debt securities, and

other financial assets to secure trust and public deposits, borrowings and letters of credit from the Federal Home Loan Bank (FHLB) and the Board of Governors of the Federal Reserve System (FRB) and for other purposes as required or permitted by law or insurance statutory requirements. Substantially all of the non-trading activity pledged collateral is not eligible to be repledged or sold by the secured party.

VIE RELATED We pledge assets in connection with various types of transactions entered into with VIEs. These pledged assets can only be used to settle the liabilities of those entities.

We also have loans recorded on our consolidated balance sheet which represent certain delinquent loans that are eligible for repurchase from GNMA loan securitizations. See Note 8 (Securitizations and Variable Interest Entities) for additional information on consolidated VIE assets.

Table 12.1: Pledged Assets

(in millions)	Jun 30, 2021	Dec 31, 2020
Related to trading activities:		
Repledged third-party owned debt and equity securities	\$ 37,134	44,765
Trading debt securities and other	18,362	19,572
Equity securities	704	470
Total pledged assets related to trading activities	56,200	64,807
Related to non-trading activities:		
Loans	308,551	344,220
Debt securities:		
Available-for-sale	59,512	57,289
Held-to-maturity	11,552	17,290
Other financial assets	531	230
Total pledged assets related to non-trading activities	380,146	419,029
Related to VIEs:		
Consolidated VIE assets	4,927	12,146
Loans eligible for repurchase from GNMA securitizations	130	179
Total pledged assets related to VIEs	5,057	12,325
Total pledged assets	\$ 441,403	496,161

Securities Financing Activities

We enter into resale and repurchase agreements and securities borrowing and lending agreements (collectively, "securities financing activities") typically to finance trading positions (including securities and derivatives), acquire securities to cover short trading positions, accommodate customers' financing needs, and settle other securities obligations. These activities are conducted through our broker-dealer subsidiaries and, to a lesser extent, through other bank entities. Our securities financing activities primarily involve high-quality, liquid securities such as U.S. Treasury securities and government agency securities and, to a lesser extent, less liquid securities, including equity securities, corporate bonds and asset-backed securities. We account for these transactions as collateralized financings in which we typically receive or pledge securities as collateral. We believe these financing transactions generally do not have material credit risk given the collateral provided and the related monitoring processes.

OFFSETTING OF SECURITIES FINANCING ACTIVITIES Table 12.2 presents resale and repurchase agreements subject to master repurchase agreements (MRA) and securities borrowing and lending agreements subject to master securities lending agreements (MSLA). Collateralized financings, and those with a single counterparty, are presented net on our consolidated balance sheet, provided certain criteria are met that permit balance sheet netting. Substantially all transactions subject to these agreements do not meet those criteria and thus are not eligible for balance sheet netting.

Collateral we pledged consists of non-cash instruments, such as securities or loans, and is not netted on the consolidated balance sheet against the related liability. Collateral we received includes securities or loans and is not recognized on our consolidated balance sheet. Collateral pledged or received may be increased or decreased over time to maintain certain contractual thresholds, as the assets underlying each arrangement fluctuate in value. Generally, these agreements require collateral to exceed the asset or liability recognized on

the balance sheet. The following table includes the amount of collateral pledged or received related to exposures subject to enforceable MRAs or MSLAs. While these agreements are typically over-collateralized, U.S. GAAP requires disclosure in this table to limit the reported amount of such collateral to the

amount of the related recognized asset or liability for each counterparty.

In addition to the amounts included in Table 12.2, we also have balance sheet netting related to derivatives that is disclosed in Note 14 (Derivatives).

Table 12.2: Offsetting – Securities Financing Activities

(in millions)	Jun 30, 2021	Dec 31, 2020
Assets:		
Resale and securities borrowing agreements		
Gross amounts recognized	\$ 101,027	92,446
Gross amounts offset in consolidated balance sheet (1)	(13,845)	(11,513)
Net amounts in consolidated balance sheet (2)	87,182	80,933
Collateral not recognized in consolidated balance sheet (3)	(86,453)	(80,158)
Net amount (4)	\$ 729	775
Liabilities:		
Repurchase and securities lending agreements		
Gross amounts recognized	\$ 47,281	57,622
Gross amounts offset in consolidated balance sheet (1)	(13,844)	(11,513)
Net amounts in consolidated balance sheet (5)	33,437	46,109
Collateral pledged but not netted in consolidated balance sheet (6)	(33,177)	(45,819)
Net amount (4)	\$ 260	290

- (1) Represents recognized amount of resale and repurchase agreements with counterparties subject to enforceable MRAs that have been offset in the consolidated balance sheet.
- (2) Includes \$70.1 billion and \$65.6 billion classified on our consolidated balance sheet in federal funds sold and securities purchased under resale agreements at June 30, 2021, and December 31, 2020, respectively. Also includes securities purchased under long-term resale agreements (generally one year or more) classified in loans, which totaled \$17.1 billion and \$15.3 billion, at June 30, 2021, and December 31, 2020, respectively.
- (3) Represents the fair value of collateral we have received under enforceable MRAs or MSLAs, limited in the table above to the amount of the recognized asset due from each counterparty. At June 30, 2021, and December 31, 2020, we have received total collateral with a fair value of \$118.9 billion and \$108.5 billion, respectively, all of which we have the right to sell or repledge. These amounts include securities we have sold or repledged to others with a fair value of \$34.5 billion and \$36.1 billion at June 30, 2021, and December 31, 2020, respectively.
- (4) Represents the amount of our exposure (assets) or obligation (liabilities) that is not collateralized and/or is not subject to an enforceable MRA or MSLA.
- (5) Amount is classified in short-term borrowings on our consolidated balance sheet.
- (6) Represents the fair value of collateral we have pledged, related to enforceable MRAs or MSLAs, limited in the table above to the amount of the recognized liability owed to each counterparty. At June 30, 2021, and December 31, 2020, we have pledged total collateral with a fair value of \$48.5 billion and \$59.2 billion, respectively, substantially all of which may be sold or repledged by the counterparty.

REPURCHASE AND SECURITIES LENDING AGREEMENTS Securities sold under repurchase agreements and securities lending arrangements are effectively short-term collateralized borrowings. In these transactions, we receive cash in exchange for transferring securities as collateral and recognize an obligation to reacquire the securities for cash at the transaction's maturity. These types of transactions create risks, including (1) the counterparty may fail to return the securities at maturity, (2) the fair value of the securities transferred may decline below the amount of our obligation to reacquire the securities, and therefore create an obligation for us to pledge additional amounts, and (3) the counterparty may accelerate the maturity on demand, requiring us to reacquire the security prior to contractual maturity. We attempt to mitigate these risks in various ways. Our collateral primarily consists of highly liquid securities. In addition, we underwrite and monitor the financial strength of our counterparties, monitor the fair value of collateral pledged relative to contractually required repurchase amounts, and monitor that our collateral is properly returned through the clearing and settlement process in advance of our cash repayment. Table 12.3 provides the gross amounts recognized on the consolidated balance sheet (before the effects of offsetting) of our liabilities for repurchase and securities lending agreements disaggregated by underlying collateral type.

Note 12: Pledged Assets and Collateral (continued)

Table 12.3: Gross Obligations by Underlying Collateral Type

(in millions)		Jun 30, 2021	Dec 31, 2020
Repurchase agreements:			
Securities of U.S. Treasury and federal agencies	\$	19,730	22,922
Securities of U.S. States and political subdivisions		24	4
Federal agency mortgage-backed securities		8,029	15,353
Non-agency mortgage-backed securities		860	1,069
Corporate debt securities		10,047	9,944
Asset-backed securities		1,262	1,054
Equity securities		892	1,500
Other		783	336
Total repurchases		41,627	52,182
Securities lending arrangements:			
Securities of U.S. Treasury and federal agencies		42	64
Federal agency mortgage-backed securities		31	23
Corporate debt securities		45	79
Equity securities (1)		5,422	5,189
Other		114	85
Total securities lending		5,654	5,440
Total repurchases and securities lending	\$	47,281	57,622

(1) Equity securities are generally exchange traded and represent collateral received from third parties that has been repledged. We received the collateral through either margin lending agreements or contemporaneous securities borrowing transactions with other counterparties.

Table 12.4 provides the contractual maturities of our gross obligations under repurchase and securities lending agreements.

Table 12.4: Contractual Maturities of Gross Obligations

(in millions)		Overnight/ continuous	Up to 30 days	30-90 days	>90 days	Total gross obligation
June 30, 2021						
Repurchase agreements	\$	28,584	3,093	4,765	5,185	41,627
Securities lending arrangements		4,853	200	601	—	5,654
Total repurchases and securities lending (1)	\$	33,437	3,293	5,366	5,185	47,281
December 31, 2020						
Repurchase agreements	\$	36,946	5,251	5,100	4,885	52,182
Securities lending arrangements		4,690	400	350	—	5,440
Total repurchases and securities lending (1)	\$	41,636	5,651	5,450	4,885	57,622

(1) Securities lending is executed under agreements that allow either party to terminate the transaction without notice, while repurchase agreements have a term structure to them that technically matures at a point in time. The overnight/continuous repurchase agreements require election of both parties to roll the trade rather than the election to terminate the arrangement as in securities lending.

Note 13: Legal Actions

Wells Fargo and certain of our subsidiaries are involved in a number of judicial, regulatory, governmental, arbitration, and other proceedings or investigations concerning matters arising from the conduct of our business activities, and many of those proceedings and investigations expose Wells Fargo to potential financial loss. These proceedings and investigations include actions brought against Wells Fargo and/or our subsidiaries with respect to corporate-related matters and transactions in which Wells Fargo and/or our subsidiaries were involved. In addition, Wells Fargo and our subsidiaries may be requested to provide information or otherwise cooperate with government authorities in the conduct of investigations of other persons or industry groups.

Although there can be no assurance as to the ultimate outcome, Wells Fargo and/or our subsidiaries have generally denied, or believe we have a meritorious defense and will deny, liability in all significant legal actions pending against us, including the matters described below, and we intend to defend vigorously each case, other than matters we describe as having settled. We establish accruals for legal actions when potential losses associated with the actions become probable and the costs can be reasonably estimated. For such accruals, we record the amount we consider to be the best estimate within a range of potential losses that are both probable and estimable; however, if we cannot determine a best estimate, then we record the low end of the range of those potential losses. The actual costs of resolving legal actions may be substantially higher or lower than the amounts accrued for those actions.

ATM ACCESS FEE LITIGATION In October 2011, plaintiffs filed a putative class action, *Mackmin, et al. v. Visa, Inc. et al.*, against Wells Fargo & Company, Wells Fargo Bank, N.A., Visa, MasterCard, and several other banks in the United States District Court for the District of Columbia. Plaintiffs allege that the Visa and MasterCard requirement that if an ATM operator charges an access fee on Visa and MasterCard transactions, then that fee cannot be greater than the access fee charged for transactions on other networks, violates antitrust rules. Plaintiffs seek treble damages, restitution, injunctive relief, and attorneys' fees where available under federal and state law. Two other antitrust cases that make similar allegations were filed in the same court, but these cases did not name Wells Fargo as a defendant. On February 13, 2013, the district court granted defendants' motions to dismiss the three actions. Plaintiffs appealed the dismissals and, on August 4, 2015, the United States Court of Appeals for the District of Columbia Circuit vacated the district court's decisions and remanded the three cases to the district court for further proceedings. On June 28, 2016, the United States Supreme Court granted defendants' petitions for writ of certiorari to review the decisions of the United States Court of Appeals for the District of Columbia. On November 17, 2016, the United States Supreme Court dismissed the petitions as improvidently granted, and the three cases returned to the district court for further proceedings. The Company has entered into an agreement pursuant to which the Company will pay \$20.8 million to resolve the cases, subject to court approval.

AUTOMOBILE LENDING MATTERS On April 20, 2018, the Company entered into consent orders with the Office of the Comptroller of the Currency (OCC) and the Consumer Financial Protection Bureau (CFPB) to resolve, among other things, investigations by the agencies into the Company's compliance risk management program and its past practices involving certain automobile collateral protection insurance (CPI) policies and certain mortgage interest rate lock extensions. The consent orders require remediation to customers and the payment of a total of \$1.0 billion in civil money penalties to the agencies. In July 2017, the Company announced a plan to remediate customers who may have been financially harmed due to issues related to automobile CPI policies purchased through a third-party vendor on their behalf. Multiple putative class actions alleging, among other things, unfair and deceptive practices relating to these CPI policies, were filed against the Company and consolidated into one multi-district litigation in the United States District Court for the Central District of California. As previously disclosed, the Company entered into a settlement to resolve the multi-district litigation. Shareholders also filed a putative securities fraud class action against the Company and its executive officers alleging material misstatements and omissions of CPI-related information in the Company's public disclosures. In January 2020, the court dismissed this action as to all defendants except the Company and a former executive officer and limited the action to two alleged misstatements. In addition, the Company is subject to a class action in the United States District Court for the Central District of California alleging that customers are entitled to refunds related to the unused portion of guaranteed automobile protection (GAP) waiver or insurance agreements between the customer and dealer and, by assignment, the lender. In June 2021, the court granted preliminary approval of an agreement pursuant to which the Company will pay \$45 million and make certain changes to its GAP refund practices in order to settle the action. Allegations related to the CPI and GAP programs are among the subjects of a shareholder derivative lawsuit pending in the United States District Court for the Northern District of California. These and other issues related to the origination, servicing, and collection of consumer auto loans, including related insurance products, have also subjected the Company to formal or informal inquiries, investigations, or examinations from federal and state government agencies, including the CFPB. As previously disclosed, the Company entered into an agreement to resolve investigations by the state attorneys general.

COMMERCIAL LENDING SHAREHOLDER LITIGATION In October and November 2020, plaintiffs filed two putative securities fraud class actions in the United States District Court for the Northern District of California alleging that the Company and certain of its former executive officers made false and misleading statements or omissions regarding, among other things, the Company's commercial lending underwriting practices, the credit quality of its commercial credit portfolios, and the value of its commercial loans, collateralized loan obligations and commercial mortgage-backed securities.

Note 13: Legal Actions (continued)

CONSENT ORDER DISCLOSURE LITIGATION Wells Fargo shareholders have brought a putative securities fraud class action in the United States District Court for the Southern District of New York alleging that the Company and certain of its current and former executive officers and directors made false or misleading statements regarding the Company's efforts to comply with the February 2018 consent order with the Federal Reserve Board and the April 2018 consent orders with the CFPB and OCC. Allegations related to the Company's efforts to comply with these three consent orders are also among the subjects of a shareholder derivative lawsuit pending in the United States District Court for the Northern District of California.

CONSUMER DEPOSIT ACCOUNT RELATED REGULATORY INVESTIGATIONS The CFPB is conducting an investigation into whether customers were unduly harmed by the Company's historical practices associated with the freezing (and, in many cases, closing) of consumer deposit accounts after the Company detected suspected fraudulent activity (by third parties or account holders) that affected those accounts. The CFPB is also investigating certain of the Company's past disclosures to customers regarding the minimum qualifying debit card usage required for customers to receive a waiver of monthly service fees on certain consumer deposit accounts.

FOREIGN EXCHANGE BUSINESS The United States Department of Justice (Department of Justice) is investigating certain activities in the Company's foreign exchange business, including whether customers may have received pricing inconsistent with commitments made to those customers. Previous investigations by other federal government agencies have been resolved.

INTERCHANGE LITIGATION Plaintiffs representing a class of merchants have filed putative class actions, and individual merchants have filed individual actions, against Wells Fargo Bank, N.A., Wells Fargo & Company, Wachovia Bank, N.A., and Wachovia Corporation regarding the interchange fees associated with Visa and MasterCard payment card transactions. Visa, MasterCard, and several other banks and bank holding companies are also named as defendants in these actions. These actions have been consolidated in the United States District Court for the Eastern District of New York. The amended and consolidated complaint asserts claims against defendants based on alleged violations of federal and state antitrust laws and seeks damages, as well as injunctive relief. Plaintiff merchants allege that Visa, MasterCard, and payment card issuing banks unlawfully colluded to set interchange rates. Plaintiffs also allege that enforcement of certain Visa and MasterCard rules and alleged tying and bundling of services offered to merchants are anticompetitive. Wells Fargo and Wachovia, along with other defendants and entities, are parties to Loss and Judgment Sharing Agreements, which provide that they, along with other entities, will share, based on a formula, in any losses from the Interchange Litigation. On July 13, 2012, Visa, MasterCard, and the financial institution defendants, including Wells Fargo, signed a memorandum of understanding with plaintiff merchants to resolve the consolidated class action and reached a separate settlement in principle of the consolidated individual actions. The settlement payments to be made by all defendants in the consolidated class and individual actions totaled approximately \$6.6 billion before reductions applicable to certain merchants opting out of the settlement. The class settlement also provided for the distribution to class merchants of 10 basis points of default interchange across all credit rate categories for a period of eight consecutive months. The district court granted final

approval of the settlement, which was appealed to the United States Court of Appeals for the Second Circuit by settlement objector merchants. Other merchants opted out of the settlement and are pursuing several individual actions. On June 30, 2016, the Second Circuit vacated the settlement agreement and reversed and remanded the consolidated action to the United States District Court for the Eastern District of New York for further proceedings. On November 23, 2016, prior class counsel filed a petition to the United States Supreme Court, seeking review of the reversal of the settlement by the Second Circuit, and the Supreme Court denied the petition on March 27, 2017. On November 30, 2016, the district court appointed lead class counsel for a damages class and an equitable relief class. The parties have entered into a settlement agreement to resolve the money damages class claims pursuant to which defendants will pay a total of approximately \$6.2 billion, which includes approximately \$5.3 billion of funds remaining from the 2012 settlement and \$900 million in additional funding. The Company's allocated responsibility for the additional funding is approximately \$94.5 million. The court granted final approval of the settlement on December 13, 2019, which was appealed to the United States Court of Appeals for the Second Circuit by settlement objector merchants. Several of the opt-out and direct action litigations have been settled while others remain pending.

LOW INCOME HOUSING TAX CREDITS Federal government agencies have undertaken formal or informal inquiries or investigations regarding the manner in which the Company purchased, and negotiated the purchase of, certain federal low income housing tax credits in connection with the financing of low income housing developments.

MORTGAGE LENDING MATTERS Plaintiffs representing a class of mortgage borrowers have filed separate putative class actions, *Hernandez v. Wells Fargo, et al.*, *Coordes v. Wells Fargo, et al.*, *Ryder v. Wells Fargo, Liguori v. Wells Fargo*, and *Dore v. Wells Fargo*, against Wells Fargo Bank, N.A., in the United States District Court for the Northern District of California, the United States District Court for the District of Washington, the United States District Court for the Southern District of Ohio, the United States District Court for the Southern District of New York, and the United States District Court for the Western District of Pennsylvania, respectively. Plaintiffs allege that Wells Fargo improperly denied mortgage loan modifications or repayment plans to customers in the foreclosure process due to the overstatement of foreclosure attorneys' fees that were included for purposes of determining whether a customer in the foreclosure process qualified for a mortgage loan modification or repayment plan. In March 2020, the Company entered into an agreement pursuant to which the Company paid \$18.5 million to resolve the claims of the initial certified class in the *Hernandez* case, which was approved by the district court in October 2020. The *Hernandez* settlement has been reopened to include additional borrowers who the Company determined should have been included in the settlement class because the Company identified a population of additional borrowers during the relevant class period whose loans had not previously been reviewed for inclusion in the original population of impacted customers. In June 2021, the Company entered into an agreement pursuant to which the Company will pay an additional approximately \$22 million to resolve the *Hernandez* case. In July 2021, the Company entered into an agreement in the *Ryder* case pursuant to which the Company will pay \$12 million to cover other impacted borrowers who were not included in the *Hernandez* case. The *Dore* and *Coordes* cases have been voluntarily dismissed. In addition, federal banking regulators and other government agencies have undertaken formal or informal

inquiries or investigations regarding these and other mortgage servicing matters.

NOMURA/NATIXIS MORTGAGE-RELATED LITIGATION In August 2014 and August 2015, Nomura Credit & Capital Inc. (Nomura) and Natixis Real Estate Holdings, LLC (Natixis) filed a total of seven third-party complaints against Wells Fargo Bank, N.A., in New York state court. In the underlying first-party actions, Nomura and Natixis have been sued for alleged breaches of representations and warranties made in connection with residential mortgage-backed securities sponsored by them. In the third-party actions, Nomura and Natixis allege that Wells Fargo, as master servicer, primary servicer or securities administrator, failed to notify Nomura and Natixis of their own breaches, failed to properly oversee the primary servicers, and failed to adhere to accepted servicing practices. Natixis additionally alleges that Wells Fargo failed to perform default oversight duties. Wells Fargo has asserted counterclaims alleging that Nomura and Natixis failed to provide Wells Fargo notice of their representation and warranty breaches.

OFAC RELATED INVESTIGATION The Company has self-identified an issue whereby certain foreign banks utilized a Wells Fargo software-based solution to conduct import/export trade-related financing transactions with countries and entities prohibited by the Office of Foreign Assets Control (OFAC) of the United States Department of the Treasury. We do not believe any funds related to these transactions flowed through accounts at Wells Fargo as a result of the aforementioned conduct. The Company has made voluntary self-disclosures to OFAC and is cooperating with an inquiry from the Department of Justice.

ORDER OF POSTING LITIGATION Plaintiffs filed a series of putative class actions against Wachovia Bank, N.A., and Wells Fargo Bank, N.A., as well as many other banks, challenging the “high to low” order in which the banks post debit card transactions to consumer deposit accounts. Most of these actions were consolidated in multi-district litigation proceedings (MDL proceedings) in the United States District Court for the Southern District of Florida. The court in the MDL proceedings has certified a class of putative plaintiffs, and Wells Fargo moved to compel arbitration of the claims of unnamed class members. The court denied the motions to compel arbitration in October 2016, and Wells Fargo appealed this decision to the United States Court of Appeals for the Eleventh Circuit. In May 2018, the Eleventh Circuit ruled in Wells Fargo’s favor and found that Wells Fargo had not waived its arbitration rights and remanded the case to the district court for further proceedings. On September 26, 2019, the district court entered an order granting Wells Fargo’s motion and dismissed the claims of unnamed class members in favor of arbitration, which was appealed by plaintiffs to the United States Court of Appeals for the Eleventh Circuit. In April 2021, the Eleventh Circuit upheld the district court’s decision.

RETAIL SALES PRACTICES MATTERS A number of bodies or entities, including (a) federal, state, and local government agencies, including the Department of Justice, the United States Securities and Exchange Commission (SEC), and the United States Department of Labor, (b) state attorneys general, including the New York Attorney General, and (c) Congressional committees, have undertaken formal or informal inquiries, investigations, or examinations arising out of certain retail sales practices of the Company that were the subject of settlements with the CFPB, the OCC, and the Office of the Los Angeles City

Attorney announced by the Company on September 8, 2016. The Company has responded to requests from certain of the foregoing. As previously disclosed, the Company entered into agreements to resolve the state attorneys general investigations. On February 21, 2020, the Company entered into an agreement with the Department of Justice to resolve the Department of Justice’s criminal investigation into the Company’s retail sales practices, as well as a separate agreement to resolve the Department of Justice’s civil investigation. As part of the Department of Justice criminal settlement, no charges will be filed against the Company provided the Company abides by all the terms of the agreement. The Department of Justice criminal settlement also includes the Company’s agreement that the facts set forth in the settlement document constitute sufficient facts for the finding of criminal violations of statutes regarding bank records and personal information. On February 21, 2020, the Company also entered into an order to resolve the SEC’s investigation arising out of the Company’s retail sales practices. The SEC order contains a finding, to which the Company consented, that the facts set forth include violations of Section 10(b) of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder. As part of the resolution of the Department of Justice and SEC investigations, the Company made payments totaling \$3.0 billion. In addition, as part of the settlements and included in the \$3.0 billion amount, the Company agreed to the creation of a \$500 million Fair Fund for the benefit of investors who were harmed by the conduct covered in the SEC settlement. In addition, a number of lawsuits were filed by non-governmental parties seeking damages or other remedies related to these retail sales practices. As previously disclosed, the Company entered into various settlements to resolve these lawsuits.

RMBS TRUSTEE LITIGATION In December 2014, Phoenix Light SF Limited and certain related entities and the National Credit Union Administration (NCUA) filed complaints in the United States District Court for the Southern District of New York against Wells Fargo Bank, N.A., alleging claims against the Company in its capacity as trustee for a number of residential mortgage-backed securities trusts. Complaints raising similar allegations have been filed by Commerzbank AG in the Southern District of New York and by IKB International and IKB Deutsche Industriebank in New York state court. In each case, the plaintiffs allege that Wells Fargo Bank, N.A., as trustee, caused losses to investors, and plaintiffs assert causes of action based upon, among other things, the trustee’s alleged failure to notify and enforce repurchase obligations of mortgage loan sellers for purported breaches of representations and warranties, notify investors of alleged events of default, and abide by appropriate standards of care following alleged events of default. The Company previously settled two class actions with similar allegations that were filed in November 2014 and December 2016 by institutional investors in the Southern District of New York and New York state court, respectively. In March 2021, the Company entered into an agreement to resolve the case filed by the NCUA.

SEMINOLE TRIBE TRUSTEE LITIGATION The Seminole Tribe of Florida filed a complaint in Florida state court alleging that Wells Fargo, as trustee, charged excess fees in connection with the administration of a minor’s trust and failed to invest the assets of the trust prudently. The complaint was later amended to include three individual current and former beneficiaries as plaintiffs and to remove the Tribe as a party to the case. In December 2016, the Company filed a motion to dismiss the amended complaint on the grounds that the Tribe is a necessary party and that the individual beneficiaries lack standing to bring

Note 13: Legal Actions (continued)

claims. The motion was denied in June 2018. The case is pending trial.

OUTLOOK As described above, the Company establishes accruals for legal actions when potential losses associated with the actions become probable and the costs can be reasonably estimated. The high end of the range of reasonably possible potential losses in excess of the Company's accrual for probable and estimable losses was approximately \$2.8 billion as of June 30, 2021. The outcomes of legal actions are unpredictable and subject to significant uncertainties, and it is inherently difficult to determine whether any loss is probable or even possible. It is also inherently difficult to estimate the amount of any loss and there may be matters for which a loss is probable or reasonably possible but not currently estimable. Accordingly, actual losses may be in excess of the established accrual or the range of reasonably possible loss. Based on information currently available, advice of counsel, available insurance coverage, and established reserves, Wells Fargo believes that the eventual outcome of the actions against Wells Fargo and/or its subsidiaries will not, individually or in the aggregate, have a material adverse effect on Wells Fargo's consolidated financial condition. However, it is possible that the ultimate resolution of a matter, if unfavorable, may be material to Wells Fargo's results of operations for any particular period.

Note 14: Derivatives

We use derivatives to manage exposure to market risk, including interest rate risk, credit risk and foreign currency risk, and to assist customers with their risk management objectives. We designate certain derivatives as hedging instruments in qualifying hedge accounting relationships (fair value or cash flow hedges). Our remaining derivatives consist of economic hedges that do not qualify for hedge accounting and derivatives held for customer accommodation trading or other purposes. For additional information on our derivative activities, see Note 16 (Derivatives) in our 2020 Form 10-K.

Table 14.1 presents the total notional or contractual amounts and fair values for our derivatives. Derivative transactions can be measured in terms of the notional amount, but this amount is not recorded on our consolidated balance sheet and is not, when viewed in isolation, a meaningful measure of the risk profile of the instruments. The notional amount is generally not exchanged, but is used only as the basis on which interest and other payments are determined.

Table 14.1: Notional or Contractual Amounts and Fair Values of Derivatives

(in millions)	June 30, 2021			December 31, 2020

Total	\$	25,415	14,551		25,846	16,509

Table 14.2 provides information on the gross fair values of derivative assets and liabilities, the balance sheet netting adjustments and the resulting net fair value amount recorded on our consolidated balance sheet, as well as the non-cash collateral associated with such arrangements. We execute substantially all of our derivative transactions under master netting arrangements and reflect all derivative balances and related cash collateral subject to enforceable master netting arrangements on a net basis within the consolidated balance sheet. The “Gross amounts recognized” column in the following table includes \$52.9 billion and \$44.7 billion of gross derivative assets and liabilities, respectively, at June 30, 2021, and \$54.6 billion and \$50.1 billion, respectively, at December 31, 2020, with counterparties subject to enforceable master netting arrangements that are eligible for balance sheet netting adjustments. The majority of these amounts are interest rate contracts executed in over-the-counter (OTC) markets. The remaining gross derivative assets and liabilities of \$8.1 billion and \$5.0 billion, respectively, at June 30, 2021, and \$11.1 billion

and \$8.0 billion, respectively, at December 31, 2020, include those with counterparties subject to master netting arrangements for which we have not assessed the enforceability because they are with counterparties where we do not currently have positions to offset, those subject to master netting arrangements where we have not been able to confirm the enforceability and those not subject to master netting arrangements. As such, we do not net derivative balances or collateral within the consolidated balance sheet for these counterparties. Cash collateral receivables and payables that have not been offset against our derivatives were \$2.6 billion and \$828 million, respectively, at June 30, 2021, and \$1.8 billion and \$984 million, respectively, at December 31, 2020.

We determine the balance sheet netting adjustments based on the terms specified within each master netting arrangement. We disclose the balance sheet netting amounts within the column titled “Gross amounts offset in consolidated balance sheet.” Balance sheet netting adjustments are determined at the counterparty level for which there may be multiple contract

Note 14: Derivatives (continued)

types. For disclosure purposes, we allocate these netting adjustments to the contract type for each counterparty proportionally based upon the “Gross amounts recognized” by counterparty. As a result, the net amounts disclosed by contract type may not represent the actual exposure upon settlement of the contracts.

We do not net non-cash collateral that we receive and pledge on our consolidated balance sheet. For disclosure purposes, we present the fair value of this non-cash collateral in the column titled “Gross amounts not offset in consolidated balance sheet (Disclosure-only netting)” within the table. We determine and allocate the Disclosure-only netting amounts in the same manner as balance sheet netting amounts.

The “Net amounts” column within Table 14.2 represents the aggregate of our net exposure to each counterparty after

considering the balance sheet and Disclosure-only netting adjustments. We manage derivative exposure by monitoring the credit risk associated with each counterparty using counterparty-specific credit risk limits, using master netting arrangements and obtaining collateral. Derivative contracts executed in OTC markets include bilateral contractual arrangements that are not cleared through a central clearing organization but are typically subject to master netting arrangements. The proportion of these derivative contracts relative to our total derivative assets and liabilities are presented in the “Percent exchanged in over-the-counter market” column in Table 14.2. In addition to the netting amounts included in the table, we also have balance sheet netting related to resale and repurchase agreements that are disclosed within Note 12 (Pledged Assets and Collateral).

Table 14.2: Gross Fair Values of Derivative Assets and Liabilities

(in millions)	Gross amounts recognized	Gross amounts offset in consolidated balance sheet (1)	Net amounts in consolidated balance sheet	Gross amounts not offset in consolidated balance sheet (Disclosure-only netting)	Net amounts	Percent exchanged in over-the-counter market

(1) Represents amounts with counterparties subject to enforceable master netting arrangements that have been offset in the consolidated balance sheet, including related cash collateral and portfolio level counterparty valuation adjustments. Counterparty valuation adjustments related to derivative assets were \$299 million and \$399 million and debit valuation adjustments related to derivative liabilities were \$145 million and \$201 million as of June 30, 2021, and December 31, 2020, respectively. Cash collateral totaled \$5.4 billion and \$5.1 billion, netted against derivative assets and liabilities, respectively, at June 30, 2021, and \$5.5 billion and \$7.5 billion, respectively, at December 31, 2020.

Fair Value and Cash Flow Hedges

For fair value hedges, we use interest rate swaps to convert certain of our fixed-rate long-term debt and time certificates of deposit to floating rates to hedge our exposure to interest rate risk. We also enter into cross-currency swaps, cross-currency interest rate swaps and forward contracts to hedge our exposure to foreign currency risk and interest rate risk associated with the issuance of non-U.S. dollar denominated long-term debt. In addition, we use interest rate swaps, cross-currency swaps, cross-currency interest rate swaps and forward contracts to hedge against changes in fair value of certain investments in available-for-sale debt securities due to changes in interest rates, foreign currency rates, or both. For certain fair value hedges of foreign currency risk, changes in fair value of cross-currency swaps attributable to changes in cross-currency basis spreads are excluded from the assessment of hedge effectiveness and recorded in other comprehensive income. See Note 21 (Other Comprehensive Income) for the amounts recognized in other comprehensive income.

For cash flow hedges, we use interest rate swaps to hedge the variability in interest payments received on certain floating-

rate commercial loans and paid on certain floating-rate debt due to changes in the contractually specified interest rate. We also use cross-currency swaps to hedge variability in interest payments on fixed-rate foreign currency-denominated long-term debt due to changes in foreign exchange rates.

We estimate \$76 million pre-tax of deferred net losses related to cash flow hedges in OCI at June 30, 2021, will be reclassified into net interest income during the next twelve months. The deferred losses expected to be reclassified into net interest income are predominantly related to discontinued hedges of floating rate loans. For cash flow hedges as of June 30, 2021, we are hedging our foreign currency exposure to the variability of future cash flows for all forecasted transactions for a maximum of 9 years. For additional information on our accounting hedges, see Note 1 (Summary of Significant Accounting Policies).

Table 14.3 and Table 14.4 show the net gains (losses) related to derivatives in fair value and cash flow hedging relationships, respectively.

Table 14.3: Gains (Losses) Recognized on Fair Value Hedging Relationships

Note 14: Derivatives (continued)

Table 14.5 shows the carrying amount and associated cumulative basis adjustment related to the application of hedge accounting that is included in the carrying amount of hedged assets and liabilities in fair value hedging relationships.

Table 14.5: Hedged Items in Fair Value Hedging Relationship

(in millions)	Hedged Items Currently Designated		Hedged Items No Longer Designated (1)	
	Carrying Amount of Assets/(Liabilities) (2)(4)	Hedge Accounting Basis Adjustment Assets/(Liabilities) (3)	Carrying Amount of Assets/(Liabilities) (4)	Hedge Accounting Basis Adjustment Assets/(Liabilities)
June 30, 2021				
Available-for-sale debt securities (5)	\$ 28,655	(35)	16,792	994
Deposits	(14,206)	(295)	—	—
Long-term debt	(148,673)	(7,312)	(5,248)	2
December 31, 2020				
Available-for-sale debt securities (5)	\$ 29,538	827	17,091	1,111
Deposits	(22,384)	(477)	—	—
Long-term debt	(156,907)	(12,466)	(14,468)	31

- (1) Represents hedged items no longer designated in qualifying fair value hedging relationships for which an associated basis adjustment exists at the balance sheet date.
- (2) Does not include the carrying amount of hedged items where only foreign currency risk is the designated hedged risk. The carrying amount excluded for debt securities is \$12.0 billion and for long-term debt is \$(2.8) billion as of June 30, 2021, and \$17.6 billion for debt securities and \$(4.7) billion for long-term debt as of December 31, 2020.
- (3) The balance includes \$188 million and \$160 million of debt securities and long-term debt cumulative basis adjustments as of June 30, 2021, respectively, and \$205 million and \$130 million of debt securities and long-term debt cumulative basis adjustments as of December 31, 2020, respectively, on terminated hedges whereby the hedged items have subsequently been re-designated into existing hedges.
- (4) Represents the full carrying amount of the hedged asset or liability item as of the balance sheet date, except for circumstances in which only a portion of the asset or liability was designated as the hedged item in which case only the portion designated is presented.
- (5) Carrying amount represents the amortized cost.

Derivatives Not Designated as Hedging Instruments

Derivatives not designated as hedging instruments include economic hedges and derivatives entered into for customer accommodation trading purposes.

We use economic hedge derivatives to manage our exposure to interest rate risk, equity price risk, foreign currency risk, and credit risk. We also use economic hedge derivatives to mitigate the periodic earnings volatility caused by mismatches between the changes in fair value of the hedged item and hedging instrument recognized on our fair value accounting hedges. In second quarter 2020, we entered into arrangements to

transition the economic hedges of our deferred compensation plan liabilities from equity securities to derivative instruments. Changes in the fair values of derivatives used to economically hedge the deferred compensation plan are reported in personnel expense.

For additional information on economic hedges and other derivatives, see Note 14 (Derivatives) to Financial Statements in our 2020 Form 10-K.

Table 14.6 shows the net gains (losses), recognized by income statement lines, related to derivatives not designated as hedging instruments.

(1) Mortgage banking amounts for the second quarter and first half of 2021 are comprised of gains (losses) of \$707 million and \$(933) million, respectively, related to derivatives used as economic hedges of MSRs measured at fair value offset by gains (losses) of \$(420) million and \$845 million related to derivatives used as economic hedges of mortgage loans held for sale and derivative loan commitments. The corresponding amounts for the second quarter and first half of 2020 are comprised of gains (losses) of \$535 million and \$3.9 billion offset by gains (losses) of \$(393) million and \$(1.3) billion, respectively.

Credit Derivatives

Credit derivative contracts are arrangements whose value is derived from the transfer of credit risk of a reference asset or entity from one party (the purchaser of credit protection) to another party (the seller of credit protection). We use credit derivatives to assist customers with their risk management objectives. We may also use credit derivatives in structured product transactions or liquidity agreements written to special purpose vehicles. The maximum exposure of sold credit derivatives is managed through posted collateral, purchased credit derivatives and similar products in order to achieve our desired credit risk profile. This credit risk management provides an ability to recover a significant portion of any amounts that

would be paid under sold credit derivatives. We would be required to perform under the sold credit derivatives in the event of default by the referenced obligors. Events of default include events such as bankruptcy, capital restructuring or lack of principal and/or interest payment. In certain cases, other triggers may exist, such as the credit downgrade of the referenced obligors or the inability of the special purpose vehicle for which we have provided liquidity to obtain funding.

Table 14.7 provides details of sold and purchased credit derivatives.

Table 14.7: Sold and Purchased Credit Derivatives

(in millions)	Fair value asset	Fair value liability	Notional amount					Range of maturities	
			Protection sold (A)	Protection sold – non-investment grade	Protection purchased with identical underlyings (B)	Net protection sold (A)-(B)	Other protection purchased

Protection sold represents the estimated maximum exposure to loss that would be incurred under an assumed hypothetical circumstance, where the value of our interests and any associated collateral declines to zero, without any consideration of recovery or offset from any economic hedges. We believe this hypothetical circumstance to be an extremely remote possibility and accordingly, this required disclosure is not an indication of expected loss. The amounts under non-investment grade represent the notional amounts of those credit derivatives on which we have a higher risk of being required to perform under the terms of the credit derivative and are a function of the underlying assets.

We consider the risk of performance to be high if the underlying assets under the credit derivative have an external rating that is below investment grade or an internal credit default grade that is equivalent thereto. We believe the net protection sold, which is representative of the net notional amount of protection sold and purchased with identical underlyings, in combination with other protection purchased, is more representative of our exposure to loss than either non-investment grade or protection sold. Other protection purchased represents additional protection, which may offset the exposure to loss for protection sold, that was not purchased with an identical underlying of the protection sold.

Credit-Risk Contingent Features

Certain of our derivative contracts contain provisions whereby if the credit rating of our debt were to be downgraded by certain major credit rating agencies, the counterparty could demand additional collateral or require termination or replacement of derivative instruments in a net liability position. Table 14.8 illustrates our exposure to OTC bilateral derivative contracts with credit-risk contingent features, collateral we have posted, and the additional collateral we would be required to post if the credit rating of our debt was downgraded below investment grade.

Table 14.8: Credit-Risk Contingent Features

(in billions)	Jun 30, 2021	Dec 31, 2020
Net derivative liabilities with credit-risk contingent features	\$ 10.4	10.5
Collateral posted	9.4	9.0
Additional collateral to be posted upon a below investment grade credit rating (1)	1.0	1.5

(1) Any credit rating below investment grade requires us to post the maximum amount of collateral.

Note 15: Fair Values of Assets and Liabilities

We use fair value measurements to record fair value adjustments to certain assets and liabilities and to determine fair value disclosures. Assets and liabilities recorded at fair value on a recurring basis, such as derivatives, residential MSRs, and trading or AFS debt securities, are presented in Table 15.1 in this Note. Additionally, from time to time, we record fair value adjustments on a nonrecurring basis. These nonrecurring adjustments typically involve application of lower of cost or fair value (LOCOM) accounting, write-downs of individual assets or application of the measurement alternative for nonmarketable equity securities. Assets recorded at fair value on a nonrecurring basis are presented in Table 15.4 in this Note. We provide in Table 15.8 estimates of fair value for financial instruments that are not recorded at fair value, such as loans and debt liabilities carried at amortized cost.

See Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K for discussion of how we determine fair value. For descriptions of the valuation methodologies we use for assets and liabilities recorded at fair value on a recurring or nonrecurring basis, see Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K.

FAIR VALUE HIERARCHY We classify our assets and liabilities recorded at fair value as either Level 1, 2, or 3 in the fair value hierarchy. The highest priority (Level 1) is assigned to valuations based on unadjusted quoted prices in active markets and the lowest priority (Level 3) is assigned to valuations based on significant unobservable inputs. See Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K for a detailed description of the fair value hierarchy.

In the determination of the classification of financial instruments in Level 2 or Level 3 of the fair value hierarchy, we consider all available information, including observable market data, indications of market liquidity and orderliness, and our understanding of the valuation techniques and significant inputs used. This determination is ultimately based upon the specific facts and circumstances of each instrument or instrument category and judgments are made regarding the significance of the unobservable inputs to the instruments' fair value measurement in its entirety. If unobservable inputs are considered significant, the instrument is classified as Level 3.

We do not classify nonmarketable equity securities in the fair value hierarchy if we use the non-published net asset value (NAV) per share (or its equivalent) as a practical expedient to measure fair value. Marketable equity securities with published NAVs are classified in the fair value hierarchy.

Assets and Liabilities Recorded at Fair Value on a Recurring Basis

Table 15.1 presents the balances of assets and liabilities recorded at fair value on a recurring basis.

Table 15.1: Fair Value on a Recurring Basis

- (1) Includes net gains (losses) included in both net income and other comprehensive income. All amounts represent net gains (losses) included in net income except for \$22 million and \$36 million included in other comprehensive income from available-for-sale debt securities in the second quarter and first half of 2021, respectively. The corresponding amounts for the second quarter and first half of 2020 were \$16 million and \$(75) million, respectively.
- (2) Includes originations of mortgage servicing rights and loans held for sale.
- (3) All assets and liabilities transferred into Level 3 were previously classified within Level 2.
- (4) All assets and liabilities transferred out of Level 3 are classified as Level 2.
- (5) Includes net unrealized gains (losses) related to assets and liabilities held at period end included in both net income and other comprehensive income. All amounts represent net unrealized gains (losses) included in net income except for \$38 million and \$31 million included in other comprehensive income from available-for-sale debt securities in the second quarter and first half of 2021, respectively. The corresponding amounts for the second quarter and first half of 2020 were \$13 million and \$(40) million, respectively.
- (6) Included in net gains on trading and securities in the consolidated statement of income.
- (7) Included in mortgage banking income in the consolidated statement of income.
- (8) For additional information on the changes in mortgage servicing rights, see Note 9 (Mortgage Banking Activities).
- (9) Included in mortgage banking income, net gains on trading and securities, and other noninterest income in the consolidated statement of income.

Table 15.3 provides quantitative information about the valuation techniques and significant unobservable inputs used in the valuation of our Level 3 assets and liabilities measured at fair value on a recurring basis.

The significant unobservable inputs for Level 3 assets inherent in the fair values obtained from third-party vendors are not included in the table, as the specific inputs applied are not

provided by the vendor (for additional information on vendor-developed valuations, see Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K).

Weighted averages of inputs are calculated using outstanding unpaid principal balance for cash instruments, such as loans and securities, and notional amounts for derivative instruments.

Table 15.3: Valuation Techniques – Recurring Basis

(\$ in millions, except cost to service amounts)	Fair Value Level 3	Valuation Technique	Significant Unobservable Input	Range of Inputs	Weighted Average

Insignificant Level 3 assets, net of liabilities 44					
Total Level 3 assets, net of liabilities	\$ 19,930 (3)				

(1) The high end of the range of inputs is for servicing modified loans. For non-modified loans the range is \$57 - \$239 at June 30, 2021, and \$63 - \$252 at December 31, 2020.

(2) Includes a blend of prepayment speeds and expected defaults. Prepayment speeds are influenced by mortgage interest rates as well as our estimation of drivers of borrower behavior.

(3) Consists of total Level 3 assets of \$22.8 billion and \$21.9 billion and total Level 3 liabilities of \$2.5 billion and \$2.0 billion, before netting of derivative balances, at June 30, 2021, and December 31, 2020, respectively.

Note 15: Fair Values of Assets and Liabilities (continued)

For additional information on the valuation techniques and significant unobservable inputs used in the valuation of our Level 3 assets and liabilities, including how changes in these inputs affect fair value estimates, see Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K.

Assets and Liabilities Recorded at Fair Value on a Nonrecurring Basis

We may be required, from time to time, to measure certain assets at fair value on a nonrecurring basis in accordance with GAAP. These adjustments to fair value usually result from application of LOCOM accounting, write-downs of individual

assets, or application of the measurement alternative for nonmarketable equity securities.

Table 15.4 provides the fair value hierarchy and fair value at the date of the nonrecurring fair value adjustment for all assets that were still held as of June 30, 2021, and December 31, 2020, and for which a nonrecurring fair value adjustment was recorded during the six months ended June 30, 2021, and year ended December 31, 2020.

Table 15.5 presents the increase (decrease) in value of certain assets held at the end of the respective reporting periods presented for which a nonrecurring fair value adjustment was recognized during the periods presented.

Table 15.4: Fair Value on a Nonrecurring Basis

(in millions)	June 30, 2021			December 31, 2020		
	Level 2	Level 3	Total	Level 2	Level 3	Total
Loans held for sale (1)	2,956	1,439	4,395	2,672	2,945	5,617
Loans:						
Commercial	432	—	432	1,385	—	1,385
Consumer	221	—	221	395	—	395
Total loans	653	—	653	1,780	—	1,780
Mortgage servicing rights (commercial)	—	567	567	—	510	510
Nonmarketable equity securities	3,882	85	3,967	2,397	790	3,187
Other assets	976	157	1,133	1,350	428	1,778
Total assets at fair value on a nonrecurring basis	\$ 8,467	2,248	10,715	8,199	4,673	12,872

(1) Predominantly consists of commercial mortgages and residential mortgage – first lien loans.

Nonmarketable equity securities includes impairment on private equity and venture capital investments and gains or losses under the measurement alternative. Other assets includes impairments of operating lease ROU assets, valuation losses on foreclosed real estate and other collateral owned, and impairment on private equity and venture capital investments in consolidated portfolio companies.

Nonmarketable equity securities	2,215	(410)
Other assets	(56)	(394)
Total	\$ 1,956	(1,431)

Table 15.6 provides quantitative information about the valuation techniques and significant unobservable inputs used in the valuation of our Level 3 assets that are measured at fair value on a nonrecurring basis and determined using an internal model. The table is limited to financial instruments that had nonrecurring fair value adjustments during the periods presented. Weighted averages of inputs are calculated using outstanding unpaid principal balance for cash instruments, such as loans, and carrying value prior to the nonrecurring fair value measurement for nonmarketable equity securities.

Table 15.6: Valuation Techniques – Nonrecurring Basis

(\$ in millions)	Fair Value Level 3	Valuation Technique (1)	Significant Unobservable Input (1)	Range of Inputs Positive (Negative)	Weighted Average
June 30, 2021

			Company risk factor	(62.6) - 0.0	(30.3)
			Crude oil prices (\$/barrel)	\$ 42 - 48	47
			Natural gas prices (\$/MMBtu)	2 - 2	2
Insignificant Level 3 assets	19				
Total	\$ 4,673				

(1) See Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K for additional information on the valuation technique(s) and significant unobservable inputs used in the valuation of Level 3 assets.

(2) Consists of approximately \$1.2 billion and \$2.6 billion of government insured/guaranteed loans purchased from GNMA-guaranteed mortgage securitizations at June 30, 2021, and December 31, 2020, respectively, and approximately \$200 million and \$300 million of other mortgage loans that are not government insured/guaranteed at June 30, 2021, and December 31, 2020.

(3) Applies only to non-government insured/guaranteed loans.

(4) Includes the impact on prepayment rate of expected defaults for government insured/guaranteed loans, which impact the frequency and timing of early resolution of loans.

(5) Includes \$417 million of private equity and venture capital investments in consolidated portfolio companies classified in other assets on the consolidated balance sheet at December 31, 2020.

Fair Value Option

The fair value option is an irrevocable election, generally only permitted upon initial recognition of financial assets or liabilities, to measure eligible financial instruments at fair value with changes in fair value reflected in earnings. We may elect the fair value option to align the measurement model with how the financial assets or liabilities are managed or to reduce complexity or accounting asymmetry. Following is a discussion of the portfolios for which we elected the fair value option. For additional information, including the basis for our fair value

option elections, see Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K.

Table 15.7 reflects differences between the fair value carrying amount of the assets for which we have elected the fair value option and the contractual aggregate unpaid principal amount at maturity. Nonaccrual loans and loans 90 days or more past due and still accruing included in LHFS for which we have elected the fair value option were insignificant at June 30, 2021, and December 31, 2020.

Table 15.7: Fair Value Option

(in millions)	June 30, 2021			December 31, 2020		
	Fair value carrying amount	Aggregate unpaid principal	Fair value carrying amount less aggregate unpaid principal	Fair value carrying amount	Aggregate unpaid principal	Fair value carrying amount less aggregate unpaid principal
Loans held for sale	\$ 18,894	18,526	368	18,806	18,217	589

Note 15: Fair Values of Assets and Liabilities (continued)

The changes in fair value related to initial measurement and subsequent changes in fair value included in earnings for LHFS accounted for under the fair value option were \$823 million and \$1.2 billion in the second quarter and first half of 2021, respectively, and \$773 million and \$1.1 billion in the second quarter and first half of 2020, respectively. Substantially all of these amounts were included in the mortgage banking noninterest income line of the consolidated statement of income. For performing loans, instrument-specific credit risk gains or losses were derived principally by determining the change in fair value of the loans due to changes in the observable or implied credit spread. Credit spread is the market yield on the loans less the relevant risk-free benchmark interest rate. For nonperforming loans, we attribute all changes in fair value to instrument-specific credit risk. Gains and losses attributable to instrument-specific credit risk related to assets accounted for under the fair value option in the second quarter and first half of both 2021 and 2020 were insignificant.

Disclosures about Fair Value of Financial Instruments

Table 15.8 presents a summary of fair value estimates for financial instruments that are not carried at fair value on a recurring basis. Some financial instruments are excluded from the scope of this table, such as certain insurance contracts, certain nonmarketable equity securities, and leases. This table also excludes assets and liabilities that are not financial instruments such as the value of the long-term relationships with our deposit, credit card and trust customers, MSRs, premises and equipment, goodwill and deferred taxes.

Loan commitments, standby letters of credit and commercial and similar letters of credit are not included in Table 15.8. A reasonable estimate of the fair value of these instruments is the carrying value of deferred fees plus the allowance for unfunded credit commitments, which totaled \$1.4 billion and at both June 30, 2021, and December 31, 2020, respectively.

The total of the fair value calculations presented does not represent, and should not be construed to represent, the underlying fair value of the Company.

Table 15.8: Fair Value Estimates for Financial Instruments

(in millions)	Carrying amount	Estimated fair value				Total

Total financial liabilities	\$ 324,728	—	311,641	21,321	—	332,962

(1) Amounts consist of financial instruments for which carrying value approximates fair value.

(2) Excludes lease financing with a carrying amount of \$15.2 billion and \$15.4 billion at June 30, 2021, and December 31, 2020, respectively.

(3) Excludes deposit liabilities with no defined or contractual maturity of \$1.4 trillion at both June 30, 2021, and December 31, 2020, respectively.

(4) Excludes capital lease obligations under capital leases of \$28 million at both June 30, 2021, and December 31, 2020, respectively.

Note 16: Preferred Stock

We are authorized to issue 20 million shares of preferred stock and 4 million shares of preference stock, both without par value. Preferred shares outstanding rank senior to common shares both as to dividends and liquidation preference but have no general voting rights. We have not issued any preference shares under this authorization. If issued, preference shares would be limited to one vote per share. Our total authorized, issued and outstanding preferred stock is presented in the following two tables along with the Employee Stock Ownership Plan (ESOP) Cumulative Convertible Preferred Stock.

In January 2021, we issued \$3.5 billion of our Preferred Stock, Series BB, and in February 2021, we issued \$1.05 billion of our Preferred Stock, Series CC. In March 2021, we redeemed our Preferred Stock Series I, Series P and Series W, and partially redeemed our Preferred Stock, Series N, for an aggregate cost of \$4.5 billion. In June 2021, we redeemed the remaining outstanding shares of our Preferred Stock, Series N, for a cost of \$350 million. In July 2021, we issued \$1.25 billion of our Preferred Stock, Series DD.

- Series I preferred stock issuance relates to trust preferred securities. See Note 8 (Securitizations and Variable Interest Entities) for additional information. This issuance has a floating interest rate that is the greater of three-month London Interbank Offered Rate (LIBOR) plus 0.93% and 5.56975%. In first quarter 2021, Preferred Stock, Series I, was redeemed.
- Preferred Stock, Series L, may be converted at any time, at the option of the holder, into 6.3814 shares of our common stock, plus cash in lieu of fractional shares, subject to anti-dilution adjustments.
- In first quarter 2021, 16,000 shares of Preferred Stock, Series N, were redeemed and Preferred Stock, Series P and Series W were fully redeemed; in second quarter 2021, the remaining 14,000 shares of Preferred Stock, Series N, were redeemed.
- See the "ESOP Cumulative Convertible Preferred Stock" section in this Note for additional information about the liquidation preference for the ESOP Cumulative Convertible Preferred Stock.

- (1) Floating rate for Preferred Stock, Series I, is the greater of three-month London Interbank Offered Rate (LIBOR) plus 0.93% and 5.56975%. In first quarter 2021, Preferred Stock, Series I, was redeemed.
- (2) Preferred Stock, Series L, may be converted at any time, at the option of the holder, into 6.3814 shares of our common stock, plus cash in lieu of fractional shares, subject to anti-dilution adjustments.
- (3) In first quarter 2021, \$400 million of Preferred Stock, Series N, was redeemed and Preferred Stock, Series P and Series W were fully redeemed; in second quarter 2021, the remaining \$350 million of Preferred Stock, Series N, was redeemed.
- (4) See the “ESOP Cumulative Convertible Preferred Stock” section in this Note for additional information about the liquidation preference for the ESOP Cumulative Convertible Preferred Stock.

ESOP CUMULATIVE CONVERTIBLE PREFERRED STOCK All shares of our ESOP Cumulative Convertible Preferred Stock (ESOP Preferred Stock) were issued to a trustee acting on behalf of the Wells Fargo & Company 401(k) Plan (the 401(k) Plan). Dividends on the ESOP Preferred Stock are cumulative from the date of initial issuance and are payable quarterly at annual rates based upon the year of issuance. Each share of ESOP Preferred Stock released from the unallocated reserve of the 401(k) Plan is converted into shares of our common stock based on the stated

value of the ESOP Preferred Stock and the then current market price of our common stock. The ESOP Preferred Stock is also convertible at the option of the holder at any time, unless previously redeemed. We have the option to redeem the ESOP Preferred Stock at any time, in whole or in part, at a redemption price per share equal to the higher of (a) \$1,000 per share plus accrued and unpaid dividends or (b) the fair market value, as defined in the Certificates of Designation for the ESOP Preferred Stock.

Table 16.3: ESOP Preferred Stock

(in millions, except shares)	Shares issued and outstanding		Carrying value		Adjustable dividend rate

2012	20,634	20,634	21	21	10.00	11.00
Total ESOP Preferred Stock (1)	822,242	822,242	\$ 822	822		
Unearned ESOP shares (2)			\$ (875)	(875)		

(1) At both June 30, 2021, and December 31, 2020, additional paid-in capital included \$53 million related to ESOP preferred stock.

(2) We recorded a corresponding charge to unearned ESOP shares in connection with the issuance of the ESOP Preferred Stock. The unearned ESOP shares are reduced as shares of the ESOP Preferred Stock are committed to be released.

Note 17: Revenue from Contracts with Customers

Our revenue includes net interest income on financial instruments and noninterest income. Table 17.1 presents our revenue by operating segment. For additional description of our

operating segments, including additional financial information and the underlying management accounting process, see Note 22 (Operating Segments).

- (1) Taxable-equivalent adjustments related to tax-exempt income on certain loans and debt securities are included in net interest income, while taxable-equivalent adjustments related to income tax credits for low-income housing and renewable energy investments are included in noninterest income, in each case with corresponding impacts to income tax expense (benefit). Adjustments are included in Corporate, Commercial Banking, and Corporate and Investment Banking and are eliminated to reconcile to the Company's consolidated financial results.
- (2) These revenues are related to financial assets and liabilities, including loans, leases, securities and derivatives, with additional details included in other footnotes to our financial statements.
- (3) We earned trailing commissions of \$300 million and \$598 million for the second quarter and first half of 2021, respectively, and \$257 million and \$532 million for the second quarter and first half of 2020, respectively.
- (4) The cost of credit card rewards and rebates of \$373 million and \$683 million for the second quarter and first half of 2021, respectively, and \$266 million and \$651 million for the second quarter and first half of 2020, respectively, are presented net against the related revenues.

INVESTMENT ADVISORY AND OTHER ASSET-BASED FEES are earned for providing brokerage advisory, asset management and trust services.

Fees from advisory account relationships with brokerage customers are charged based on a percentage of the market value of the client's assets. Services and obligations related to providing investment advice, active management of client assets, and assistance with selecting and engaging a third-party advisory manager are generally satisfied over a month or quarter. Trailing commissions are earned for selling shares to investors and our obligation is satisfied at the time shares are sold. However, these fees are received and recognized over time during the period the customer owns the shares and we remain the broker of record. The amount of trailing commissions is variable based on the length of time the customer holds the shares and on changes in the value of the underlying assets.

Asset management services include managing and administering assets, including mutual funds, and institutional separate accounts. Fees for these services are generally determined based on a tiered scale relative to the market value of assets under management (AUM). In addition to AUM, we have client assets under administration (AUA) that earn various administrative fees which are generally based on the extent of the services provided to administer the account. Services with AUM and AUA-based fees are generally satisfied over time.

Trust services include acting as a trustee or agent for corporate trust, personal trust, and agency assets. Obligations for trust services are generally satisfied over time; however, obligations for activities that are transitional in nature are satisfied at the time of the transaction.

COMMISSIONS AND BROKERAGE SERVICES FEES are earned for providing brokerage services.

Commissions from transactional accounts with brokerage customers are earned for executing transactions at the client's direction. Our obligation is generally satisfied upon the execution of the transaction and the fees are based on the size and number of transactions executed.

Fees earned from other brokerage services include securities clearance, omnibus and networking fees received from mutual fund companies in return for providing record keeping and other administrative services, and annual account maintenance fees charged to customers. Our obligation is satisfied at the time we provide the service which is generally at the time of the transaction.

For a description of our other revenues, see Note 20 (Revenue from Contracts with Customers) in our 2020 Form 10-K.

Note 18: Employee Benefits and Other Expenses

Pension and Postretirement Plans

We sponsor a frozen noncontributory qualified defined benefit retirement plan, the Wells Fargo & Company Cash Balance Plan (Cash Balance Plan), which covers eligible employees of Wells Fargo. The Cash Balance Plan was frozen on July 1, 2009, and no new benefits accrue after that date. For additional information on our pension and postretirement plans, including plan assumptions, investment strategy and asset allocation, projected benefit payments, and valuation methodologies used for assets measured at fair value, see Note 21 (Employee Benefits and Other Expenses) in our 2020 Form 10-K.

We recognize settlement losses for our Cash Balance Plan based on an assessment of whether lump sum benefit payments will, in aggregate for the year, exceed the sum of its annual service and interest cost (threshold). Settlement losses of \$62 million and \$70 million were recognized during second quarter 2021 and 2020, respectively, representing the pro rata portion of the net loss in cumulative other comprehensive income based on the percentage reduction in the Cash Balance

Plan's projected benefit obligation attributable to lump sum benefit payments during the first half of both 2021 and 2020. As a result of the settlement losses, we re-measured the Cash Balance Plan obligation and plan assets as of both June 30, 2021 and 2020, and used a discount rate of 2.80% and 2.75%, respectively, based on our consistent methodology of determining our discount rate using a yield curve with maturity dates that closely match the estimated timing of the expected benefit payments. The result of the settlement losses and remeasurement increased the Cash Balance Plan asset by \$347 million and other comprehensive income (pre-tax) by \$409 million in second quarter 2021, and increased the Cash Balance Plan liability by \$674 million and decreased other comprehensive income (pre-tax) by \$604 million in second quarter 2020.

Table 18.1 presents the components of net periodic benefit cost. Service cost is reported in personnel expense and all other components of net periodic benefit cost are reported in other noninterest expense on the consolidated statement of income.

Table 18.1: Net Periodic Benefit Cost

Other Expenses

Regulatory Charges and Assessments expense, which is included in other noninterest expense, was \$192 million and \$409 million in the second quarter and first half of 2021, respectively, compared with \$211 million and \$374 million in the same periods a year ago, and primarily consisted of Federal Deposit Insurance Corporation (FDIC) deposit assessment expense.

Note 19: Restructuring Charges

The Company began pursuing various initiatives to reduce expenses and create a more efficient and streamlined organization in third quarter 2020. Actions from these initiatives may include (i) reorganizing and simplifying business processes and structures to improve internal operations and the customer experience, (ii) reducing headcount, (iii) optimizing third-party spending, including for our technology infrastructure, and (iv) rationalizing our branch and administrative locations, which may include consolidations and closures.

Restructuring charges are recorded as a component of noninterest expense on our consolidated statement of income.

The following costs associated with these initiatives are included in restructuring charges.

- Personnel costs – Severance costs associated with headcount reductions with payments made over time in accordance with our severance plan, as well as payments for other employee benefit costs such as incentive compensation.
- Facility closure costs – Write-downs and acceleration of depreciation and amortization of owned or leased assets for branch and administrative locations, as well as related decommissioning costs.
- Other – Impairment of other assets and costs associated with our technology infrastructure.

Table 19.1 provides details on our restructuring charges.

Table 19.1: Accruals for Restructuring Charges

(in millions)	Personnel costs	Facility closure costs	Other	Total
Quarter ended June 30, 2021

Changes in estimates (1)	(96)	—	—	(96)
Balance, end of year	\$ 1,170	—	44	1,214

(1) Represents reduction of expense for changes in previously estimated amounts based on refinements of assumptions.

Note 20: Earnings and Dividends Per Common Share

Table 20.1 shows earnings per common share and diluted earnings per common share and reconciles the numerator and denominator of both earnings per common share calculations.

Table 20.1: Earnings Per Common Share Calculations

(in millions, except per share amounts)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Wells Fargo net income (loss) (1)	\$ 6,040	\$ (3,846)	\$ 10,676	(2,930)
Less: Preferred stock dividends and other (2)	297	314	677	926
Wells Fargo net income (loss) applicable to common stock (numerator) (1)	\$ 5,743	(4,160)	\$ 9,999	(3,856)
Earnings per common share				
Average common shares outstanding (denominator)	4,124.6	4,105.5	4,132.9	4,105.2
Per share	\$ 1.39	(1.01)	\$ 2.42	(0.94)
Diluted earnings per common share				
Average common shares outstanding	4,124.6	4,105.5	4,132.9	4,105.2
Add: Restricted share rights (3)	31.5	—	31.7	—
Diluted average common shares outstanding (denominator)	4,156.1	4,105.5	4,164.6	4,105.2
Per share	\$ 1.38	(1.01)	\$ 2.40	(0.94)

- (1) In second quarter 2021, we elected to change our accounting method for low-income housing tax credit investments and elected to change the presentation of investment tax credits related to solar energy investments. Prior period balances have been revised to conform with the current period presentation. For additional information, see Note 1 (Summary of Significant Accounting Policies).
- (2) The quarter ended June 30, 2021, balance included \$4 million, and the six months ended June 30, 2021 and 2020, includes \$48 million and \$272 million, respectively, from the elimination of discounts or issuance costs associated with redemptions of preferred stock.
- (3) Calculated using the treasury stock method. In the second quarter and first half of 2020, diluted average common shares outstanding equaled average common shares outstanding because our securities convertible into common shares had an anti-dilutive effect.

Table 20.2 presents the outstanding securities that were anti-dilutive and therefore not included in the calculation of diluted earnings per common share.

Table 20.2: Outstanding Anti-Dilutive Securities

(in millions)	Quarter ended June 30,		Weighted-average shares Six months ended June 30,	
	2021	2020	2021	2020
Convertible Preferred Stock, Series L (1)	25.3	25.3	25.3	25.3
Restricted share rights (2)	0.2	35.9	0.1	0.9

- (1) Calculated using the if-converted method.
- (2) Calculated using the treasury stock method. Since we had net losses attributable to common shareholders for the second quarter and first half of 2020, all RSRs outstanding were anti-dilutive. Weighted average RSRs outstanding were 50.7 million and 54.7 million for the second quarter and first half of 2020, respectively.

Table 20.3 presents dividends declared per common share.

Table 20.3: Dividends Declared Per Common Share

	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Per common share	\$ 0.10	\$ 0.51	\$ 0.20	1.02

Note 21: Other Comprehensive Income

Table 21.1 provides the components of other comprehensive income (OCI), reclassifications to net income by income statement line item, and the related tax effects.

Less: Other comprehensive income (loss) from noncontrolling interests, net of tax			1			—			2			(1)
Wells Fargo other comprehensive income (loss), net of tax		\$ 686				766		(758)				513

(1) Represents net unrealized gains and losses amortized over the remaining lives of securities that were transferred from the available-for-sale portfolio to the held-to-maturity portfolio.

(2) Represents changes in fair value of cross-currency swaps attributable to changes in cross-currency basis spreads, which are excluded from the assessment of hedge effectiveness and recorded in other comprehensive income.

(3) These items are included in the computation of net periodic benefit cost (see Note 18 (Employee Benefits and Other Expenses) for additional information).

Note 21: Other Comprehensive Income (continued)

Table 21.2 provides the cumulative OCI balance activity on an after-tax basis.

Table 21.2: Cumulative OCI Balances

(1) Substantially all of the amounts for fair value hedges are foreign exchange contracts.

(2) Majority of the amounts for cash flow hedges are interest rate contracts.

Note 22: Operating Segments

Our management reporting is organized into four reportable operating segments: Consumer Banking and Lending; Commercial Banking; Corporate and Investment Banking; and Wealth and Investment Management. All other business activities that are not included in the reportable operating segments have been included in Corporate. We define our reportable operating segments by type of product and customer segment, and their results are based on our management reporting process. The management reporting process measures the performance of the reportable operating segments based on the Company's management structure, and the results are regularly reviewed by our Chief Executive Officer and Operating Committee. The management reporting process is based on U.S. GAAP and includes specific adjustments, such as funds transfer pricing for asset/liability management, shared revenues and expenses, and taxable-equivalent adjustments to consistently reflect income from taxable and tax-exempt sources, which allows management to assess performance consistently across the operating segments.

In March 2021, we announced an agreement to sell our Corporate Trust Services business and, in second quarter 2021, we moved the business from the Commercial Banking operating segment to Corporate. Prior period balances have been revised to conform with the current period presentation. This change did not impact the previously reported consolidated financial results of the Company.

In second quarter 2021, we elected to change our accounting method for low-income housing tax credit (LIHTC) investments and elected to change the presentation of investment tax credits related to solar energy investments. These accounting policy changes had a nominal impact on reportable operating segment results. Prior period financial statement line items for the Company, as well as for the reportable operating segments, have been revised to conform with the current period presentation. Our LIHTC investments are included in the Corporate and Investment Banking operating segment and our solar energy investments are included in the Commercial Banking operating segment. For additional information, see Note 1 (Summary of Significant Accounting Policies).

Consumer Banking and Lending offers diversified financial products and services for consumers and small businesses with annual sales generally up to \$5 million. These financial products and services include checking and savings accounts, credit and debit cards, as well as home, auto, personal, and small business lending.

Commercial Banking provides financial solutions to private, family owned and certain public companies. Products and services include banking and credit products across multiple industry sectors and municipalities, secured lending and lease products, and treasury management.

Corporate and Investment Banking delivers a suite of capital markets, banking, and financial products and services to corporate, commercial real estate, government and institutional clients globally. Products and services include corporate banking, investment banking, treasury management, commercial real estate lending and servicing, equity and fixed income solutions, as well as sales, trading, and research capabilities.

Wealth and Investment Management provides personalized wealth management, investment and retirement products and services to clients across U.S.-based businesses including Wells Fargo Advisors and The Private Bank. We serve clients' brokerage needs, and deliver financial planning, private banking, credit, and fiduciary services to high-net worth and ultra-high-net worth individuals and families.

Corporate includes corporate treasury and enterprise functions, net of allocations (including funds transfer pricing, capital, liquidity and certain expenses), in support of the reportable operating segments, as well as our investment portfolio and affiliated venture capital and private equity businesses. In addition, Corporate includes all restructuring charges related to our efficiency initiatives. See Note 19 (Restructuring Charges) for additional information on restructuring charges. Corporate also includes certain lines of business that management has determined are no longer consistent with the long-term strategic goals of the Company, as well as results for previously divested businesses.

Basis of Presentation

FUNDS TRANSFER PRICING Corporate treasury manages a funds transfer pricing methodology that considers interest rate risk, liquidity risk, and other product characteristics. Operating segments pay a funding charge for their assets and receive a funding credit for their deposits, both of which are included in net interest income. The net impact of the funding charges or credits is recognized in corporate treasury.

REVENUE AND EXPENSE SHARING When lines of business jointly serve customers, the line of business that is responsible for providing the product or service recognizes revenue or expense with a referral fee paid or an allocation of cost to the other line of business based on established internal revenue-sharing agreements.

When a line of business uses a service provided by another line of business or enterprise function (included in Corporate), expense is generally allocated based on the cost and use of the service provided.

TAXABLE-EQUIVALENT ADJUSTMENTS Taxable-equivalent adjustments related to tax-exempt income on certain loans and debt securities are included in net interest income, while taxable-equivalent adjustments related to income tax credits for low-income housing and renewable energy investments are included in noninterest income, in each case with corresponding impacts to income tax expense (benefit). Adjustments are included in Corporate, Commercial Banking, and Corporate and Investment Banking and are eliminated to reconcile to the Company's consolidated financial results.

Note 22: Operating Segments (continued)

Table 22.1 presents our results by operating segment.

- (1) Taxable-equivalent adjustments related to tax-exempt income on certain loans and debt securities are included in net interest income, while taxable-equivalent adjustments related to income tax credits for low-income housing and renewable energy investments are included in noninterest income, in each case with corresponding impacts to income tax expense (benefit). Adjustments are included in Corporate, Commercial Banking, and Corporate and Investment Banking and are eliminated to reconcile to the Company's consolidated financial results.
- (2) Net interest income is interest earned on assets minus the interest paid on liabilities to fund those assets. Segment interest earned includes actual interest income on segment assets as well as a funding credit for their deposits. Segment interest paid on liabilities includes actual interest expense on segment liabilities as well as a funding charge for their assets.

Capital Planning Requirements

The FRB's capital plan rule establishes capital planning and other requirements that govern capital distributions, including dividends and share repurchases, by certain large bank holding companies (BHCs), including Wells Fargo. The FRB conducts an annual Comprehensive Capital Analysis and Review exercise and has also published guidance regarding its supervisory expectations for capital planning, including capital policies regarding the process relating to common stock dividend and repurchase decisions in the FRB's SR Letter 15-18. The Parent's ability to make certain capital distributions is subject to the requirements of the capital plan rule and is also subject to the Parent meeting or exceeding certain regulatory capital minimums.

On March 25, 2021, the FRB announced that it was extending measures it previously announced limiting large BHCs, including Wells Fargo, from making any capital distribution (excluding any capital distribution arising from the issuance of a capital instrument eligible for inclusion in the numerator of a regulatory capital ratio), unless otherwise approved by the FRB. The FRB generally authorized BHCs to (i) provided that the BHC does not increase the amount of its common stock dividends to be larger than the level paid in second quarter 2020, pay common stock dividends and make share repurchases that, in the aggregate, do not exceed an amount equal to the average of the BHC's net income for the four preceding calendar quarters; (ii) make share repurchases that equal the amount of share issuances related to expensed employee compensation; and (iii) redeem and make scheduled payments on additional tier 1 and tier 2 capital instruments. These limitations on capital distributions ended on June 30, 2021.

Loan and Dividend Restrictions

Federal law restricts the amount and the terms of both credit and non-credit transactions between a bank and its nonbank affiliates. Additionally, federal laws and regulations limit the dividends that a national bank may pay.

Our nonbank subsidiaries are also limited by certain federal and state statutory provisions and regulations covering the amount of dividends that may be paid in any given year. In addition, under a Support Agreement dated June 28, 2017, as amended and restated on June 26, 2019, among Wells Fargo & Company, the parent holding company (the "Parent"), WFC Holdings, LLC, an intermediate holding company and subsidiary of the Parent (the "IHC"), Wells Fargo Bank, N.A., Wells Fargo Securities, LLC, Wells Fargo Clearing Services, LLC, and certain other subsidiaries of the Parent designated from time to time as material entities for resolution planning purposes or identified from time to time as related support entities in our resolution plan, the IHC may be restricted from making dividend payments to the Parent if certain liquidity and/or capital metrics fall below defined triggers or if the Parent's board of directors authorizes it to file a case under the U.S. Bankruptcy Code.

For additional information on loan and dividend restrictions, see Note 28 (Regulatory Capital Requirements and Other Restrictions) in our 2020 Form 10-K.

Cash Restrictions

Cash and cash equivalents may be restricted as to usage or withdrawal. Table 23.3 provides a summary of restrictions on cash and cash equivalents.

Table 23.3: Nature of Restrictions on Cash and Cash Equivalents

(in millions)	Jun 30, 2021	Dec 31, 2020

Segregated for benefit of brokerage customers under federal and other brokerage regulations	878	957

Glossary of Acronyms

ACL	Allowance for credit losses	HTM	Held-to-maturity
AFS	Available-for-sale	LCR	Liquidity coverage ratio
ALCO	Asset/Liability Committee	LHFS	Loans held for sale
ARM	Adjustable-rate mortgage	LIBOR	London Interbank Offered Rate
ASC	Accounting Standards Codification	LIHTC	Low-income housing tax credit
ASU	Accounting Standards Update	LOCOM	Lower of cost or fair value
AUA	Assets under administration	LTV	Loan-to-value
AUM	Assets under management	MBS	Mortgage-backed security
AVM	Automated valuation model	MSR	Mortgage servicing right
BCBS	Basel Committee on Banking Supervision	NAV	Net asset value
BHC	Bank holding company	NPA	Nonperforming asset
CCAR	Comprehensive Capital Analysis and Review	NSFR	Net stable funding ratio
CD	Certificate of deposit	OCC	Office of the Comptroller of the Currency
CECL	Current expected credit loss	OCI	Other comprehensive income
CET1	Common Equity Tier 1	OTC	Over-the-counter
CFPB	Consumer Financial Protection Bureau	OTTI	Other-than-temporary impairment
CLO	Collateralized loan obligation	PCD	Purchased credit-deteriorated
CLTV	Combined loan-to-value	PCI	Purchased credit-impaired
CPI	Collateral protection insurance	PTPP	Pre-tax pre-provision profit
CRE	Commercial real estate	RMBS	Residential mortgage-backed securities
DPD	Days past due	ROA	Return on average assets
ESOP	Employee Stock Ownership Plan	ROE	Return on average equity
FASB	Financial Accounting Standards Board	ROTCE	Return on average tangible common equity
FDIC	Federal Deposit Insurance Corporation	RWAs	Risk-weighted assets
FHA	Federal Housing Administration	SEC	Securities and Exchange Commission
FHLB	Federal Home Loan Bank	S&P	Standard & Poor's Ratings Services
FHLMC	Federal Home Loan Mortgage Corporation	SLR	Supplementary leverage ratio
FICO	Fair Isaac Corporation (credit rating)	SOFR	Secured Overnight Financing Rate
FNMA	Federal National Mortgage Association	SPE	Special purpose entity
FRB	Board of Governors of the Federal Reserve System	TDR	Troubled debt restructuring
GAAP	Generally accepted accounting principles	TLAC	Total Loss Absorbing Capacity
GNMA	Government National Mortgage Association	VA	Department of Veterans Affairs
GSE	Government-sponsored entity	VaR	Value-at-Risk
G-SIB	Global systemically important bank	VIE	Variable interest entity
HQLA	High-quality liquid assets	WIM	Wealth and Investment Management

PART II – OTHER INFORMATION

Item 1. Legal Proceedings

Information in response to this item can be found in Note 13 (Legal Actions) to Financial Statements in this Report which information is incorporated by reference into this item.

Item 1A. Risk Factors

Information in response to this item can be found under the “Financial Review – Risk Factors” section in this Report which information is incorporated by reference into this item.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

The following table shows Company repurchases of its common stock for each calendar month in the quarter ended June 30, 2021.

Calendar month	Total number of shares repurchased (1)	Weighted average price paid per share	Maximum number of shares that may yet be repurchased under the authorizations
April	20,075,596	\$ 43.60	629,954,518
May	10,893,389	46.11	619,061,129
June	4,354,796	43.08	614,706,333
Total	35,323,781		

(1) All shares were repurchased under an authorization covering up to 350 million shares of common stock approved by the Board of Directors and publicly announced by the Company on July 23, 2019. In addition, the Company publicly announced on January 15, 2021, that the Board of Directors authorized the repurchase of an additional 500 million shares of common stock. Unless modified or revoked by the Board, these authorizations do not expire.

Item 6. Exhibits

A list of exhibits to this Form 10-Q is set forth below.

The Company's SEC file number is 001-2979. On and before November 2, 1998, the Company filed documents with the SEC under the name Norwest Corporation. The former Wells Fargo & Company filed documents under SEC file number 001-6214.

<u>Exhibit Number</u>	<u>Description</u>	<u>Location</u>
3(a)	Restated Certificate of Incorporation, as amended and in effect on the date hereof.	Filed herewith.
3(b)	By-Laws.	Incorporated by reference to Exhibit 3.1 to the Company's Current Report on Form 8-K filed March 1, 2018.
4(a)	See Exhibits 3(a) and 3(b).	
4(b)	The Company agrees to furnish upon request to the Commission a copy of each instrument defining the rights of holders of senior and subordinated debt of the Company.	
18	Preferability Letters from KPMG LLP.	Filed herewith.
22	Subsidiary guarantors and issuers of guaranteed securities and affiliates whose securities collateralize securities of the registrant.	Incorporated by reference to Exhibit 22 to the Company's Annual Report on Form 10-K for the year ended December 31, 2020.
31(a)	Certification of principal executive officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.	Filed herewith.
31(b)	Certification of principal financial officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.	Filed herewith.
32(a)	Certification of Periodic Financial Report by Chief Executive Officer Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 and 18 U.S.C. § 1350.	Furnished herewith.
32(b)	Certification of Periodic Financial Report by Chief Financial Officer Pursuant to Section 906 of the Sarbanes-Oxley Act of 2002 and 18 U.S.C. § 1350.	Furnished herewith.

PART I.

ITEM 1. BUSINESS

Wells Fargo & Company is a corporation organized under the laws of Delaware and a financial holding company and a bank holding company registered under the Bank Holding Company Act of 1956, as amended (BHC Act). Its principal business is to act as a holding company for its subsidiaries. References in this report to “the Parent” mean the holding company. References to “we,” “our,” “us” or “the Company” mean the holding company and its subsidiaries that are consolidated for financial reporting purposes.

At December 31, 2020, we had assets of approximately \$1.9 trillion, loans of \$887.6 billion, deposits of \$1.4 trillion and stockholders’ equity of \$185 billion. Based on assets, we were the fourth largest bank holding company in the United States. At December 31, 2020, Wells Fargo Bank, N.A. was the Company’s principal subsidiary with assets of \$1.8 trillion, or 90% of the Company’s assets.

Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to those reports, are available for free at www.wellsfargo.com/about/investor-relations/filings as soon as reasonably practicable after they are electronically filed with or furnished to the Securities and Exchange Commission (SEC). They are also available for free on the SEC’s website at www.sec.gov¹.

DESCRIPTION OF BUSINESS

General

We are a leading financial services company that provides a diversified set of banking, investment and mortgage products and services, as well as consumer and commercial finance, through banking locations and offices, the internet (www.wellsfargo.com) and other distribution channels to individuals, businesses and institutions in all 50 states, the District of Columbia and in countries outside the U.S. We provide consumer financial products and services including checking and savings accounts, credit and debit cards, and auto, mortgage and home equity, and small business lending. In addition, we offer financial planning, private banking, investment management, and fiduciary services. We also provide financial solutions to businesses through products and services including traditional commercial loans and lines of credit, letters of credit, asset-based lending, trade financing, treasury management, and investment banking services.

As of December 31, 2020, we had four reportable operating segments for management reporting purposes: Consumer Banking and Lending; Commercial Banking; Corporate and Investment Banking; and Wealth and Investment Management. The 2020 Annual Report to Shareholders includes financial information and descriptions of these operating segments.

Human Capital

Our people are what set Wells Fargo apart and are critical to our success. Wells Fargo continues to invest in our employees by offering market competitive compensation, career-development opportunities, a broad array of benefits, and strong work-life programs.

In 2020, we introduced a new set of expectations for everyone at the Company. These expectations guide how we lead ourselves, collaborate with our colleagues, and make decisions. The following expectations apply to everyone at Wells Fargo, at every level, and in every role:

- Embrace candor
- Do what’s right
- Be great at execution
- Learn and grow
- Champion diversity and inclusion
- Build high-performing teams (for managers)

At December 31, 2020, we had an active employee headcount of 268,531, with approximately 88% of employees based in the United States. Our global workforce was 54% female and 46% male, and our U.S. workforce was 56% female and 44% male. Our U.S. workforce was 55% Caucasian/white and 45% racially/ethnically diverse.

Supporting Employees During the COVID-19 Pandemic. In response to the COVID-19 pandemic, we expanded work-from-home capabilities wherever possible, and enabled approximately 200,000 employees to work from home. For jobs that could not be done remotely, we took significant actions to enhance safety, including implementing social distancing measures, requiring employees to wear facial coverings, staggering staff and shifts, and enhancing cleaning protocols in accordance with guidance from the U.S. Centers for Disease Control and Prevention. We adjusted our child care benefits in the U.S. and Canada to provide additional resources and flexibility for employees impacted by school closures. We also enhanced our health care and time-off benefits in the U.S. to help fully cover the medical costs associated with COVID-19 and allow high-risk, exposed, or infected employees to stay home without having to take paid time off. At more than 50 of our largest U.S. sites, we launched a temporary on-site nursing service to screen for COVID-19 symptoms and refer individuals for testing. We also took a number of actions to support our employees’ financial security. We made additional cash payments to employees whose roles required them to go into the office to serve customers or other employees. For U.S. nonexempt employees, we temporarily doubled the hourly rate for time worked over 40 hours per week. We also made a \$25 million grant to the WE Care employee relief fund, which provided financial assistance to more than 23,000 U.S. and international employees facing COVID-related hardships.

Promoting Diversity, Equity and Inclusion. Meeting the increasingly diverse needs of Wells Fargo’s global customer base is critical to our company’s long-term growth and success. Wells Fargo values and promotes diversity, equity and inclusion in every aspect of our business. We are dedicated to recruitment and career development practices that support our employees and promote diversity in our workforce at all levels of our Company, including leadership positions. We have a strong record of recruiting, promoting, and rewarding women and racially/ethnically diverse employees at all levels of our Company, including a commitment to increase diverse representation in leadership roles. We use various metrics, including the actual percentage of women in our global workforce and racially/ethnically diverse individuals in senior leadership roles in the U.S. to monitor our progress. As of December 31, 2020, senior management (levels 2-4 down from the CEO) was 48% female

¹ We do not control this website. Wells Fargo has provided this link for your convenience, but does not endorse and is not responsible for the content, links, privacy policy, or security policy of this website.

and 25% racially/ethnically diverse, with 9% Black/African American. In November 2020, we appointed a Head of Diverse Segments, Representation and Inclusion, a newly created role reporting directly to the CEO, which has a broad mandate of driving diversity and inclusion in both our workplace and our business. This mandate included not only the work we do within our existing diversity and inclusion function, but also working with our business leaders to drive investments in products and solutions specifically for diverse populations across our country.

Pay Equity Review. Wells Fargo is committed to fair and equitable compensation practices, and we regularly review our compensation programs and practices for pay equity. Each year, we engage a third-party consultant to conduct a thorough pay equity review of employee compensation, which considers gender, race, and ethnicity. The results of our 2020 review, after accounting for factors such as role, tenure, and geography, show that women at Wells Fargo continued to earn more than 99 cents for every \$1 earned by their male peers. In addition, our U.S. employees who are racially/ethnically diverse continued to earn more than 99 cents for every \$1 earned by Caucasian/white peers. These results have remained consistent since we started publishing the results of our pay equity review in 2017.

Employee training and development. We invest heavily in coaching and training for employees and managers. We believe that when our employees feel properly supported, engaged, and confident in their skills, they are more effective and can provide an even better customer experience. During 2020, we invested more than \$200 million in employee learning and development, which included functional training, regulatory compliance, leadership and professional development, and early talent development programs for employees.

Compensation and benefits. We value and support our people as a competitive advantage. We provide all eligible full- and part-time employees (and their eligible dependents, as applicable) with a comprehensive set of benefits designed to protect their physical and financial health and to help them make the most of their financial future. Our annual investment in benefits programs per employee was approximately \$15,700. During 2020, we also raised minimum hourly pay levels in a majority of U.S. markets, with more than 25,000 employees receiving a pay adjustment.

Competition

The financial services industry is highly competitive. Our subsidiaries compete with financial services providers such as banks, savings and loan associations, credit unions, finance companies, mortgage banking companies, insurance companies, investment banks and mutual fund companies. They also face increased competition from nonbank institutions such as brokerage houses, private equity firms and online lending companies, as well as from financial services subsidiaries of commercial and manufacturing companies. Many of these competitors enjoy fewer regulatory constraints and some may have lower cost structures.

Securities firms and insurance companies that elect to become financial holding companies may acquire banks and other financial institutions. Combinations of this type could significantly change the competitive environment in which we conduct business. The financial services industry is also likely to become more competitive as further technological advances enable more companies to provide financial services. These technological advances may diminish the importance of

depository institutions and other financial intermediaries in the transfer of funds between parties.

REGULATION AND SUPERVISION

We describe below, and in Note 28 (Regulatory Capital Requirements and Other Restrictions) to Financial Statements included in the 2020 Annual Report to Shareholders, the material elements of the regulatory framework applicable to us. Banking statutes, regulations and policies are continually under review by Congress and state legislatures and federal and state regulatory agencies, as well as non-U.S. governments and financial regulators, and a change in them, including changes in how they are interpreted or implemented, could have a material effect on our business. The regulatory framework applicable to depository institutions and bank holding companies (BHCs) is intended to protect depositors, federal deposit insurance funds, consumers and the banking system as a whole, and not necessarily investors in bank holding companies such as the Company.

Statutes, regulations and policies could restrict our ability to diversify into other areas of financial services, make acquisitions, and pay dividends on our capital stock. They may also require us to provide financial support to one or more of our subsidiary banks, maintain capital balances in excess of amounts desired by management, and pay higher deposit insurance premiums as a result of a general deterioration in the financial condition of depository institutions. See the “Regulatory Matters” and “Risk Factors” sections in the 2020 Annual Report to Shareholders for additional information.

General

Parent Bank Holding Company. As a BHC, the Parent is subject to regulation under the BHC Act and to inspection, examination and supervision by its primary regulator, the Board of Governors of the Federal Reserve System (Federal Reserve Board or FRB). The Parent is also subject to the disclosure and regulatory requirements of the Securities Act of 1933, as amended, and the Securities Exchange Act of 1934, as amended, both as administered by the SEC. As a company with securities listed on the New York Stock Exchange (NYSE), the Parent is subject to the rules of the NYSE for listed companies.

Subsidiary Banks. Our subsidiary national banks, and their subsidiaries, are subject to regulation and examination primarily by the Office of the Comptroller of the Currency (OCC) and also by the Federal Deposit Insurance Corporation (FDIC), the FRB, the Consumer Financial Protection Bureau (CFPB), the SEC and the Commodities Futures Trading Commission (CFTC). The non-U.S. branches and representative offices of our subsidiary national banks are subject to regulation and examination by their respective financial regulators as well as by the OCC and the FRB. Non-U.S. subsidiaries of our national bank subsidiaries may be subject to the laws and regulations of the countries in which they conduct business.

Nonbank Subsidiaries. Many of our nonbank subsidiaries are also subject to regulation by the FRB and other applicable federal and state agencies. Our insurance subsidiaries are subject to regulation by applicable state insurance regulatory agencies, as well as the FRB. Our brokerage subsidiaries are regulated by the SEC, the Financial Industry Regulatory Authority (FINRA) and, in some cases, the CFTC and the Municipal Securities Rulemaking Board, and state securities regulators. Our other nonbank subsidiaries may be subject to the laws and regulations of the federal government and/or the various states as well as non-U.S. countries in which they conduct business.

Parent Bank Holding Company Activities

“Financial in Nature” Requirement. We became a financial holding company effective March 13, 2000. We continue to maintain our status as a BHC for purposes of other FRB regulations. As a BHC that has elected to be treated as a financial holding company pursuant to the BHC Act, we may affiliate with securities firms and insurance companies and engage in other activities that are financial in nature or incidental or complementary to activities that are financial in nature. “Financial in nature” activities include securities underwriting, dealing and market making; sponsoring mutual funds and investment companies; insurance underwriting and agency; merchant banking; and activities that the FRB, in consultation with the Secretary of the U.S. Treasury, determines to be financial in nature or incidental to such financial activity. “Complementary activities” are activities that the FRB determines upon application to be complementary to a financial activity and do not pose a safety and soundness risk.

FRB approval is generally not required for us to acquire a company (other than a BHC, bank or savings association) engaged in activities that are financial in nature or incidental to activities that are financial in nature, as determined by the FRB. Prior notice to the FRB may be required, however, if the company to be acquired has total consolidated assets of \$10 billion or more. Prior FRB approval is required before we may acquire the beneficial ownership or control of more than 5% of the voting shares or substantially all of the assets of a BHC, bank or savings association. In addition, the FRB has implemented a final rule under the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) that also prohibits our ability to merge, acquire all or substantially all of the assets of, or acquire control of another company if our total resulting consolidated liabilities would exceed 10% of the aggregate consolidated liabilities of all financial companies.

Because we are a financial holding company, if any of our subsidiary banks receives a rating under the Community Reinvestment Act of 1977, as amended (CRA), of less than satisfactory, we will be prohibited, until the rating is raised to satisfactory or better, from engaging in new activities or acquiring companies other than BHCs, banks or savings associations, except that we could engage in new activities, or acquire companies engaged in activities, that are closely related to banking under the BHC Act. CRA performance is also taken into account by regulators in reviewing applications to establish bank branches. In addition, if the FRB finds that the Company or any one of our subsidiary banks is not well capitalized or well managed, we would be required to enter into an agreement with the FRB to comply with all applicable capital and management requirements and which may contain additional limitations or conditions. Until corrected, we could be prohibited from engaging in any new activity or acquiring companies engaged in activities that are not closely related to banking under the BHC Act without prior FRB approval. If we fail to correct any such condition within a prescribed period, the FRB could order us to divest our banking subsidiaries or, in the alternative, to cease engaging in activities other than those closely related to banking under the BHC Act.

Interstate Banking. Under the Riegle-Neal Interstate Banking and Branching Act (Riegle-Neal Act), a BHC may acquire banks in states other than its home state, subject to any state requirement that the bank has been organized and operating for a minimum period of time, not to exceed five years, and the requirement that the BHC not control, prior to or following the proposed acquisition, more than 10% of the total amount of deposits of insured depository institutions nationwide or, unless

the acquisition is the bank holding company’s initial entry into the state, more than 30% of such deposits in the state (or such lesser or greater amount set by the state). The Riegle-Neal Act also authorizes banks to merge across state lines, subject to the same deposit limits noted above, thereby creating interstate branches. Banks are also permitted to acquire and to establish new branches in other states.

Regulatory Approval. In determining whether to approve a proposed bank acquisition, federal banking regulators will consider, among other factors, the effect of the acquisition on competition, financial condition, and future prospects including current and projected capital ratios and levels, the competence, experience, and integrity of management and record of compliance with laws and regulations, the convenience and needs of the communities to be served, including the acquiring institution’s record of compliance under the CRA, the effectiveness of the acquiring institution in combating money laundering activities and the risk to the stability of the United States banking system.

Dividend Restrictions

The Parent is a legal entity separate and distinct from its subsidiary banks and other subsidiaries. A significant source of funds to pay dividends on our common and preferred stock and principal and interest on our debt is dividends from the Parent’s subsidiaries. Various federal and state statutory provisions and regulations limit the amount of dividends the Parent’s subsidiary banks and certain other subsidiaries may pay without regulatory approval. Federal banking regulators have the authority to prohibit the Parent’s subsidiary banks from engaging in unsafe or unsound practices in conducting their businesses. The payment of dividends, depending on the financial condition of the bank in question, could be deemed an unsafe or unsound practice. The ability of the Parent’s subsidiary banks to pay dividends in the future is currently, and could be further, influenced by bank regulatory policies and capital requirements. For information about the restrictions applicable to the Parent’s subsidiary banks, see Note 28 (Regulatory Capital Requirements and Other Restrictions) to Financial Statements included in the 2020 Annual Report to Shareholders.

Furthermore, under a Support Agreement dated June 28, 2017, as amended and restated on June 26, 2019 (the “Support Agreement”), among the Parent, WFC Holdings, LLC, an intermediate holding company and subsidiary of the Parent (the “IHC”), Wells Fargo Bank, N.A., Wells Fargo Securities, LLC, Wells Fargo Clearing Services, LLC, and certain other direct and indirect subsidiaries of the Parent designated as material entities for resolution planning purposes or identified as related support entities in our resolution plan, the IHC may be restricted from making dividend payments to the Parent if certain liquidity and/or capital metrics fall below defined triggers, or if the Parent’s board of directors authorizes it to file a case under the U.S. Bankruptcy Code. Any such restriction could materially and adversely impact the Parent’s liquidity and its ability to satisfy its debt and other obligations, as well as its ability to make dividend payments on its common and preferred stock. See the “Regulatory Matters” and “Risk Factors” sections of the 2020 Annual Report to Shareholders for additional information on the Support Agreement.

In addition to these restrictions on the ability of our subsidiary banks to pay dividends to us, the FRB requires large BHCs, including Wells Fargo, to submit annual capital plans describing planned capital distributions, such as the payment of dividends. The FRB also finalized rules implementing in the

United States the Basel Committee on Banking Supervision's regulatory capital rules, including the reforms known as Basel III, which established various capital requirements for U.S. banking organizations. Moreover, federal banking regulators have finalized rules that require leverage and supplementary leverage ratio requirements for large BHCs, like Wells Fargo, and their insured depository institutions. We are also subject to the FRB's rule implementing an additional capital surcharge on those U.S. banking organizations, such as the Company, that are designated as global systemically important banks (G-SIBs). The failure to meet any of these requirements could result in limitations or restrictions on our ability to make capital distributions.

In addition, the FRB's enhanced supervision regulations for large BHCs, like Wells Fargo, impose capital distribution restrictions, including on the payment of dividends, upon the occurrence of capital, stress test, risk management, or liquidity risk management triggers. For more information on regulations or arrangements that may impose capital distribution restrictions on the Company and its subsidiaries, see the "Capital Management," "Regulatory Matters" and "Risk Factors" sections of the 2020 Annual Report to Shareholders.

Holding Company Structure

Transfer of Funds from Subsidiary Banks. The Parent's subsidiary banks are subject to restrictions under federal law that limit the transfer of funds or other assets from such subsidiaries to the Parent and its nonbank subsidiaries (including affiliates) in so-called "covered transactions." In general, covered transactions include loans and other extensions of credit, investments and asset purchases, as well as certain other transactions involving the transfer of value from a subsidiary bank to an affiliate or for the benefit of an affiliate. Unless an exemption applies, covered transactions by a subsidiary bank with a single affiliate are limited to 10% of the subsidiary bank's capital and surplus and, with respect to all covered transactions with affiliates in the aggregate, to 20% of the subsidiary bank's capital and surplus. Also, loans and extensions of credit to affiliates generally must be secured by qualifying collateral. A bank's transactions with its nonbank affiliates are also generally required to be on arm's length terms. The Company is also subject to lending limits and qualitative requirements on loans to executive officers, directors and principal shareholders of the Parent and its subsidiary banks.

Source of Strength. The FRB has a policy that a BHC is expected to act as a source of financial and managerial strength to each of its subsidiary banks and, under appropriate circumstances, to commit resources to support each such subsidiary bank. This support may be required at times when the BHC may not have the resources to provide the support.

The OCC may order an assessment of the Parent if the capital of one of its national bank subsidiaries were to become impaired. If the Parent failed to pay the assessment within three months, the OCC could order the sale of the Parent's stock in the national bank to cover the deficiency.

Depositor Preference. In the event of the "liquidation or other resolution" of an insured depository institution, the claims of deposits payable in the United States (including the claims of the FDIC as subrogee of insured depositors) and certain claims for administrative expenses of the FDIC as a receiver will have priority over other general unsecured claims against the institution. If an insured depository institution fails, claims of insured and uninsured U.S. depositors, along with claims of the FDIC, will have priority in payment ahead of unsecured creditors,

including the Parent, and depositors whose deposits are solely payable at such insured depository institution's non-U.S. offices.

Liability of Commonly Controlled Institutions. All of the Company's subsidiary banks in the U.S. are insured by the FDIC. FDIC-insured depository institutions can be held liable for any loss incurred, or reasonably expected to be incurred, by the FDIC due to the default of an FDIC-insured depository institution controlled by the same BHC, and for any assistance provided by the FDIC to an FDIC-insured depository institution that is in danger of default and that is controlled by the same BHC. "Default" means generally the appointment of a conservator or receiver. "In danger of default" means generally the existence of certain conditions indicating that a default is likely to occur in the absence of regulatory assistance.

Dodd-Frank Act

The Dodd-Frank Act and the numerous rules to implement its provisions have resulted in enhanced regulation and supervision of large BHCs, such as Wells Fargo. This includes, among other things, rules to promote financial stability and prevent or mitigate the risks that may arise from the material distress or failure of a large BHC; enhance consumer protections; prohibit proprietary trading; and implement enhanced prudential requirements for large BHCs regarding risk-based capital and leverage, risk and liquidity management, stress testing, and recovery and resolution planning. The Dodd-Frank Act, including current and future rules implementing its provisions and the interpretation of those rules, has affected, and we expect will continue to affect, most of our businesses in some way, either directly through regulation of specific activities or indirectly through regulation of concentration risks, capital or liquidity. For more information about the Dodd-Frank Act and its effect on our business, see the "Regulatory Matters" and "Risk Factors" sections of the 2020 Annual Report to Shareholders.

Capital and Liquidity Requirements and Capital Planning

The Company and each of our insured depository institutions are subject to various regulatory capital adequacy and liquidity requirements administered by federal banking regulators. The capital rules, among other things, establish required minimum ratios relating capital to different categories of assets and exposures. Federal banking regulators have also finalized rules to impose a leverage and supplementary leverage ratio on large BHCs, like Wells Fargo, and their insured depository institutions, and to implement a liquidity coverage ratio and a net stable funding ratio. The FRB has also finalized rules to address the amount of equity and unsecured long-term debt a G-SIB must hold to improve its resolvability and resiliency, often referred to as total loss absorbing capacity.

From time to time, federal banking regulators propose changes and amendments to, and issue interpretations of, risk-based capital requirements and related reporting instructions. In addition, the FRB closely monitors capital levels of the institutions it supervises and may require such institutions to modify capital levels based on FRB determinations. Such determinations, proposals or interpretations could, if implemented in the future, affect our reported capital ratios and net risk-adjusted assets.

As an additional means to identify problems in the financial management of depository institutions, the Federal Deposit Insurance Act (FDI Act) requires federal banking regulators to establish certain non-capital safety and soundness standards for institutions for which they are the primary federal regulator. The standards relate generally to operations and management, asset

quality, interest rate exposure, executive compensation and risk management. The agencies are authorized to take action against institutions that fail to meet such standards.

The FDI Act requires federal banking regulators to take “prompt corrective action” with respect to FDIC-insured depository institutions that do not meet minimum capital requirements. A depository institution’s treatment for purposes of the prompt corrective action provisions will depend upon how its capital levels compare to various capital measures and certain other factors, as established by regulation.

In addition, the FRB’s capital plan rule establishes capital planning and other requirements that govern capital distributions, including dividends and share repurchases, by certain BHCs, including Wells Fargo. Federal banking regulators also require stress tests to evaluate whether an institution has sufficient capital to continue to operate during periods of adverse economic and financial conditions.

For more information on our capital requirements and planning, see the “Capital Management” section of the 2020 Annual Report to Shareholders.

Deposit Insurance Assessments

Our subsidiary banks in the U.S., including Wells Fargo Bank, N.A., are members of the Deposit Insurance Fund (DIF) maintained by the FDIC. Through the DIF, the FDIC insures the deposits of our banks up to prescribed limits for each depositor and funds the DIF through assessments on member banks. To maintain the DIF, member institutions are assessed an insurance premium based on an assessment base and an assessment rate.

The FDIC has adopted a comprehensive, long-range plan for DIF management, targeting a designated reserve ratio of 2%. For the year ended December 31, 2020, the Company’s FDIC deposit insurance assessments totaled \$650 million.

The FDIC may terminate a depository institution’s deposit insurance upon a finding that the institution’s financial condition is unsafe or unsound or that the institution has engaged in unsafe or unsound practices or has violated any applicable rule, regulation, order or condition enacted or imposed by the institution’s regulatory agency. The termination of deposit insurance for one or more of our bank subsidiaries could have a material adverse effect on our earnings, depending on the collective size of the particular banks involved.

Fiscal and Monetary Policies

Our business and earnings are affected significantly by the fiscal and monetary policies of the federal government and its agencies. We are particularly affected by the monetary policies of the FRB, which regulates the supply of money and credit in the United States. Among the instruments of monetary policy available to the FRB are (a) conducting open market operations in United States government securities, (b) changing the discount rates of borrowings of depository institutions, (c) imposing or changing reserve requirements against depository institutions’ deposits, and (d) imposing or changing reserve requirements against certain borrowings by banks and their affiliates. These methods are used in varying degrees and combinations to directly affect the availability of bank loans and deposits, as well as the interest rates charged on loans and paid on deposits. The policies of the FRB may have a material effect on our business, results of operations and financial condition.

Privacy Provisions of the Gramm-Leach-Bliley Act and Restrictions on Affiliate Marketing

Federal banking regulators, as required under the Gramm-Leach-Bliley Act (the GLB Act), have adopted rules limiting the ability of

banks and other financial institutions to disclose nonpublic information about consumers to nonaffiliated third parties. The rules require disclosure of privacy policies to consumers and, in some circumstances, allow consumers to prevent disclosure of certain personal information to nonaffiliated third parties. The privacy provisions of the GLB Act affect how consumer information is transmitted through diversified financial services companies and conveyed to outside vendors. Federal financial regulators have issued regulations under the Fair and Accurate Credit Transactions Act that have the effect of increasing the length of the waiting period, after privacy disclosures are provided to new customers, before information can be shared among different affiliated companies for the purpose of marketing products and services by those affiliated companies.

Sarbanes-Oxley Act of 2002

The Sarbanes-Oxley Act of 2002 (Sarbanes-Oxley) implemented a broad range of corporate governance and accounting measures to increase corporate responsibility, to provide for enhanced penalties for accounting and auditing improprieties at publicly traded companies, and to protect investors by improving the accuracy and reliability of disclosures under federal securities laws. We are subject to Sarbanes-Oxley because we are required to file periodic reports with the SEC under the Securities Exchange Act of 1934. Among other things, Sarbanes-Oxley and/or its implementing regulations established membership requirements and additional responsibilities for our audit committee, imposed restrictions on the relationship between us and our outside auditors (including restrictions on the types of non-audit services our auditors may provide to us), imposed additional responsibilities for our external financial statements on our chief executive officer and chief financial officer, expanded the disclosure requirements for our corporate insiders, required our management to evaluate our disclosure controls and procedures and our internal control over financial reporting, and required our independent registered public accounting firm to issue a report on our internal control over financial reporting.

Patriot Act

The Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act of 2001 (Patriot Act) is intended to strengthen the ability of U.S. law enforcement agencies and intelligence communities to work together to combat terrorism on a variety of fronts. The Patriot Act has significant implications for depository institutions, brokers, dealers and other businesses involved in the transfer of money. The Patriot Act requires the implementation of policies and procedures relating to anti-money laundering, compliance, suspicious activities, and currency transaction reporting and due diligence on customers. The Patriot Act also requires federal banking regulators to evaluate the effectiveness of an applicant in combating money laundering in determining whether to approve a proposed bank acquisition.

Future Legislation or Regulation

Economic, market and political conditions during the past few years have led to a significant amount of legislation and regulation in the U.S. and abroad affecting the financial services industry, as well as heightened expectations and scrutiny of financial services companies from banking regulators. Further legislative changes and additional regulations may change our operating environment in substantial and unpredictable ways. Such legislation and regulations could increase our cost of doing business, affect our compensation structure, restrict or expand the activities in which we may engage or affect the competitive

balance among banks, savings associations, credit unions, and other financial institutions. We cannot predict whether future legislative proposals will be enacted and, if enacted, the effect that they, or any implementing regulations, would have on our business, results of operations or financial condition.

As of December 31, 2020, we provided a diversified set of banking, investment and mortgage products and services, as well as consumer and commercial finance, through banking locations and offices under ownership and lease agreements. We continue to evaluate our owned and leased properties and may determine from time to time that certain of our properties are no longer necessary for our operations. There is no assurance that we will be able to dispose of any excess properties or that we will not incur charges in connection with such dispositions, which could be material to our operating results in a given period.

ADDITIONAL INFORMATION

Additional information in response to this Item 2 can be found in the 2020 Annual Report to Shareholders under “Financial Statements – Notes to Financial Statements – Note 7 (Premises, Equipment and Other Assets).” That information is incorporated into this item by reference.

ITEM 3. LEGAL PROCEEDINGS

Information in response to this Item 3 can be found in the 2020 Annual Report to Shareholders under “Financial Statements – Notes to Financial Statements – Note 15 (Legal Actions).” That information is incorporated into this item by reference.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II

ITEM 5. MARKET FOR REGISTRANT’S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

MARKET INFORMATION

The Company’s common stock is listed on the NYSE (symbol “WFC”). The “Stock Performance” section of the 2020 Annual Report to Shareholders provides stockholder return comparisons and is incorporated herein by reference. At February 16, 2021, there were 273,418 holders of record of the Company’s common stock.

DIVIDENDS

The dividend restrictions discussions in the “Regulation and Supervision – Dividend Restrictions” section under Item 1 of this report and in the 2020 Annual Report to Shareholders under “Financial Statements – Notes to Financial Statements – Note 28

(Regulatory Capital Requirements and Other Restrictions)” are incorporated into this item by reference.

REPURCHASES OF EQUITY SECURITIES

In July 2019, our Board of Directors authorized the repurchase of 350 million shares of our common stock, of which approximately 167 million shares were remaining under this authority at December 31, 2020. In January 2021, our Board of Directors authorized the repurchase of an additional 500 million shares of our common stock. The authorizations cover shares repurchased to meet employee benefit plan requirements. The Company maintains a variety of retirement plans for its employees and typically is a net issuer of shares of common stock to these plans. From time to time, it also purchases shares of common stock from these plans to accommodate employee preferences. Share repurchases are subtracted from the Company’s repurchase authority without offset for share issuances. Shares may be repurchased as part of employee stock option exercises, from the different benefit plans or in the open market, subject to regulatory approval.

The amount and timing of stock repurchases will be based on various factors, including our capital requirements, the number of shares we expect to issue for employee benefit plans and acquisitions, market conditions (including the trading price of our stock), and regulatory and legal considerations. See the “Capital Management” section in the 2020 Annual Report to Shareholders for additional information about our common stock repurchases.

The following table shows Company repurchases of its common stock for each calendar month in the quarter ended December 31, 2020. In fourth quarter 2020, share repurchases were limited to repurchases in connection with the Wells Fargo & Company Stock Purchase Plan.

Calendar month	Total number of shares repurchased (1)	Weighted-average price paid per share	Maximum number of shares that may yet be repurchased under the authorization
October	38,777	\$ 23.46	167,334,604
November	42,428	24.74	167,292,176
December	50,917	29.17	167,241,259
Total	132,122		

(1) All shares were repurchased under an authorization covering up to 350 million shares of common stock approved by the Board of Directors and publicly announced by the Company on July 23, 2019. Unless modified or revoked by the Board, this authorization does not expire.

ITEM 6. SELECTED FINANCIAL DATA

Not applicable.

ITEM 7. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Information in response to this Item 7 can be found in the 2020 Annual Report to Shareholders under “Financial Review.” That information is incorporated into this item by reference.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Information in response to this Item 7A can be found in the 2020 Annual Report to Shareholders under “Financial Review – Risk Management – Asset/Liability Management.” That information is incorporated into this item by reference.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

Information in response to this Item 8 can be found in the 2020 Annual Report to Shareholders under “Financial Statements,” under “Notes to Financial Statements” and under “Quarterly Financial Data.” That information is incorporated into this item by reference.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

Not applicable.

ITEM 9A. CONTROLS AND PROCEDURES

Information in response to this Item 9A can be found in the 2020 Annual Report to Shareholders under “Controls and Procedures.” That information is incorporated into this item by reference.

ITEM 9B. OTHER INFORMATION

Not applicable.

PART III

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

INFORMATION ABOUT OUR EXECUTIVE OFFICERS

Muneera S. Carr (age 52)

Executive Vice President, Chief Accounting Officer and Controller since March 2020;
Executive Vice President and Controller from January 2020 to March 2020;

Managing Director, Head of Business Banking at Bank of America Corporation, a financial services company, from September 2017 to July 2020;
Managing Director, Head of Global Transaction Services at Bank of America Corporation from May 2015 to September 2017.
Mr. Williams has served with the Company for less than 1 year.

There is no family relationship between any of the Company's executive officers or directors. All executive officers serve at the pleasure of the Board of Directors.

AUDIT COMMITTEE INFORMATION

The Audit Committee is a standing audit committee of the Board of Directors established in accordance with Section 3(a)(58)(A) of the Securities Exchange Act of 1934. The Committee has four members: Mark A. Chancy, Theodore F. Craver, Jr., Charles H. Noski (Chair), and Ronald L. Sargent. Each member is independent, as independence for audit committee members is defined by NYSE rules. The Board of Directors has determined, in its business judgment, that each member of the Audit Committee is financially literate, as required by NYSE rules, and that each qualifies as an "audit committee financial expert" as defined by SEC regulations.

CODE OF ETHICS AND BUSINESS CONDUCT

The Company's Code of Ethics and Business Conduct applicable to employees (including executive officers) as well as directors, the Company's corporate governance guidelines, and the charters for the Audit, Governance and Nominating, Human Resources, Corporate Responsibility, Credit, Finance, and Risk Committees are available at www.wellsfargo.com/about/corporate/governance. Effective March 1, 2021, the Risk Committee will have primary oversight responsibility for credit risk and the Credit Committee will become a subcommittee of the Risk Committee.

ADDITIONAL INFORMATION

Additional information in response to this Item 10 can be found in the Company's 2021 Proxy Statement under "Corporate Governance – Item 1 – Election of Directors – Director Nominees for Election" and under "Corporate Governance – Director Election Standard and Nomination Process – Director Nomination Process." That information is incorporated into this item by reference.

ITEM 11. EXECUTIVE COMPENSATION

Information in response to this Item 11 can be found in the Company's 2021 Proxy Statement under "Corporate Governance – Compensation Committee Interlocks and Insider Participation," under "Corporate Governance – Director Compensation," under "Information About Related Persons – Related Person Transactions," and under "Executive Compensation – Compensation Committee Report," "Executive Compensation – Compensation Discussion and Analysis," "Executive Compensation – Executive Compensation Tables," and "Human Capital Management – Performance Management and Incentive Compensation – Incentive Compensation Risk Management," and "Human Capital Management – Our Workforce – CEO Pay Ratio and Median Annual Total Compensation." That information is incorporated into this item by reference.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

EQUITY COMPENSATION PLAN INFORMATION

The following table provides information about our equity compensation plans in effect on December 31, 2020, separately aggregated for plans approved by shareholders and for plans not approved by shareholders. A description of the material features of each equity compensation plan not approved by shareholders follows the table. All outstanding awards relate to shares of our common stock. Information is as of December 31, 2020, unless otherwise indicated.

Equity Compensation Plan Information			
Plan category	(a) # of shares to be issued upon exercise of outstanding option, warrants and rights	(b) Weighted-average exercise price of outstanding options, warrants and rights (1)	(c) # of shares remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a))
Equity compensation plans approved by security holders	55,945,540 (2)	\$ 0.00	204,307,278 (3)
Equity compensation plans not approved by security holders	5,185,538 (4)	NA	3,462,972 (5)
Total	61,131,078	0.00	207,770,250

- (1) Does not reflect restricted share rights (RSRs), restricted share units (RSUs), performance share awards or deferred compensation benefits because they have no exercise price.
- (2) For the Long-Term Incentive Compensation Plan (LTICP), consists of 46,280,020 shares subject to RSRs, and a maximum of 7,556,784 performance shares. For the Supplemental 401(k) Plan, consists of 1,637,957 shares issuable upon distribution of benefits. For the Directors Stock Compensation and Deferral Plan (Directors Plan), consists of 264,598 shares issuable upon distribution of deferred stock awards, and 206,181 shares issuable upon distribution of deferred compensation benefits.
- (3) We could have issued the number of shares of our common stock indicated in the following table pursuant to any of the award types listed for the plan or, if indicated for the plan, pursuant to distributions of deferred compensation benefits. Each share of common stock issued under the LTICP pursuant to awards count as two shares.
- (4) This consists of shares of common stock issuable upon distribution of deferred compensation benefits and 2,833 shares issuable upon distribution related to the Norwest Corporation Directors' Formula Stock Award Plan.
- (5) We could have issued the number of shares of our common stock indicated in the following table pursuant to distributions of deferred compensation benefits. No information is provided for the Norwest Corporation Directors' Formula Stock Award Plan because no future awards or deferrals will be made under this plan and because column (a) reflects all shares issuable under those plans upon exercise or distribution of outstanding awards or deferred compensation benefits.

Plans approved by security holders	# of shares remaining available for future issuance under equity compensation plans	Award types
LTICP	202,279,485	Stock, restricted stock, RSRs, performance shares, performance units
Supplemental 401(k) Plan	1,764,227	Deferral distribution
Directors Plan	263,566	Stock options, deferral distribution
Total	204,307,278	

Plans not approved by security holders	# of shares remaining available for future issuance under equity compensation plans	Award types
Deferred Compensation Plan	3,305,224	Deferral distribution
Non-Qualified Deferred Compensation Plan for Independent Contractors	157,748	Deferral distribution
Total	3,462,972	

Material Features of Equity Compensation Plans Not Approved by Shareholders

Deferred Compensation Plan. Under the Deferred Compensation Plan, eligible employees may defer receipt of salary, bonuses and certain other compensation subject to the terms of the plan. Deferral elections are irrevocable once made except for limited re-deferral opportunities. We treat amounts deferred by a participant as if invested in the earnings options selected by the participant, and determine the deferred compensation benefit payable to the participant based on the performance of those earnings options. The plan offers a number of earnings options, including one based on our common stock with dividends reinvested. We generally distribute amounts allocated to the common stock option in shares of common stock. Participants have no direct interest in any of the earnings options and are general unsecured creditors of the Company with respect to their deferred compensation benefits under the plan.

Non-Qualified Deferred Compensation Plan for Independent Contractors. Under the Non-Qualified Deferred Compensation Plan for Independent Contractors participants who performed qualifying investment or other financial services for participating affiliates as independent contractors were able to defer all or part of their eligible compensation payable to them by the affiliate subject to the terms of the plan. Deferral elections were irrevocable once made. Amounts deferred by a participant were treated as if invested in the earnings options selected by the participant, which determine the deferred compensation benefit payable to the participant. The plan offered a number of earnings options, including one based on our common stock with dividends reinvested. We generally distribute amounts allocated to the common stock option in shares of common stock. No future deferrals may be made under this plan and participants may no longer reallocate their existing account balances under the plan among different investment options. Shares remaining available for issuance under the plan consist of shares issuable as a result of amounts credited to participant accounts denominated in our common stock to reflect cash dividends paid on the common stock. The plan is sponsored by a wholly owned subsidiary, WF Deferred Compensation Holdings, Inc. We have guaranteed its obligations under the plan. Participants have no direct interest in any of the earnings options and are general unsecured creditors of the plan sponsor and the Company with respect to their deferred compensation benefits under the plan.

Norwest Corporation Directors' Formula Stock Award Plan. Under the Norwest Corporation Directors' Formula Stock Award Plan we awarded shares of common stock to non-employee directors. The plan allowed participants to defer receipt of all or a portion of their awards, with dividends reinvested, until a future year or years as selected by the participants subject to the terms of the plan. Participants can elect one time to defer commencement of distribution of their deferral accounts if the election is made sufficiently in advance of the original distribution commencement date and the new distribution commencement date is sufficiently beyond the original distribution commencement date. Participants have no direct interest in the shares deferred under the plan and are general unsecured creditors of the Company with respect to payment of their deferred stock awards under the plan. No future stock awards or deferrals may be made under this plan.

ADDITIONAL INFORMATION

Additional information in response to this Item 12 can be found in the Company's 2021 Proxy Statement under "Ownership of Our Common Stock – Directors and Executive Officers – Director and Executive Officer Stock Ownership Table" and "Ownership of Our Common Stock – Principal Shareholders." That information is incorporated into this item by reference.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

Information in response to this Item 13 can be found in the Company's 2021 Proxy Statement under "Corporate Governance – Item 1 – Election of Directors – Director Independence" and under "Information About Related Persons." That information is incorporated into this item by reference.

ITEM 14. PRINCIPAL ACCOUNTING FEES AND SERVICES

Information in response to this Item 14 can be found in the Company's 2021 Proxy Statement under "Audit Matters – Item 3 – Ratify Appointment of Independent Registered Public Accounting Firm for 2021 – KPMG Fees" and "Audit Matters – Item 3 – Ratify Appointment of Independent Registered Public Accounting Firm for 2021 – Audit Committee Pre-Approval Policies and Procedures." That information is incorporated into this item by reference.

PART IV

ITEM 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES

1. FINANCIAL STATEMENTS

The Company's consolidated financial statements, including the Notes thereto, and the report of the independent registered public accounting firm thereon, are set forth in the 2020 Annual Report to Shareholders, and are incorporated into this item by reference.

2. FINANCIAL STATEMENT SCHEDULES

All financial statement schedules for the Company have been included in the consolidated financial statements or the related footnotes, or are either inapplicable or not required.

3. EXHIBITS

A list of exhibits to this Form 10-K is set forth below. Shareholders may obtain a copy of any of the following exhibits, upon payment of a reasonable fee, by writing to Wells Fargo & Company, Office of the Corporate Secretary, MAC D1130-117, 301 S. Tryon Street, 11th Floor, Charlotte, North Carolina 28282.

The Company's SEC file number is 001-2979. On and before November 2, 1998, the Company filed documents with the SEC under the name Norwest Corporation. The former Wells Fargo & Company filed documents under SEC file number 001-6214. The former Wachovia Corporation filed documents under SEC file number 001-10000.

Note 15: Legal Actions

Wells Fargo and certain of our subsidiaries are involved in a number of judicial, regulatory, governmental, arbitration, and other proceedings or investigations concerning matters arising from the conduct of our business activities, and many of those proceedings and investigations expose Wells Fargo to potential financial loss. These proceedings and investigations include actions brought against Wells Fargo and/or our subsidiaries with respect to corporate-related matters and transactions in which Wells Fargo and/or our subsidiaries were involved. In addition, Wells Fargo and our subsidiaries may be requested to provide information or otherwise cooperate with government authorities in the conduct of investigations of other persons or industry groups.

Although there can be no assurance as to the ultimate outcome, Wells Fargo and/or our subsidiaries have generally denied, or believe we have a meritorious defense and will deny, liability in all significant legal actions pending against us, including the matters described below, and we intend to defend vigorously each case, other than matters we describe as having settled. We establish accruals for legal actions when potential losses associated with the actions become probable and the costs can be reasonably estimated. For such accruals, we record the amount we consider to be the best estimate within a range of potential losses that are both probable and estimable; however, if we cannot determine a best estimate, then we record the low end of the range of those potential losses. The actual costs of resolving legal actions may be substantially higher or lower than the amounts accrued for those actions.

ATM ACCESS FEE LITIGATION In October 2011, plaintiffs filed a putative class action, *Mackmin, et al. v. Visa, Inc. et al.*, against Wells Fargo & Company, Wells Fargo Bank, N.A., Visa, MasterCard, and several other banks in the United States District Court for the District of Columbia. Plaintiffs allege that the Visa and MasterCard requirement that if an ATM operator charges an access fee on Visa and MasterCard transactions, then that fee cannot be greater than the access fee charged for transactions on other networks, violates antitrust rules. Plaintiffs seek treble damages, restitution, injunctive relief, and attorneys' fees where available under federal and state law. Two other antitrust cases that make similar allegations were filed in the same court, but these cases did not name Wells Fargo as a defendant. On February 13, 2013, the district court granted defendants' motions to dismiss the three actions. Plaintiffs appealed the dismissals and, on August 4, 2015, the United States Court of Appeals for the District of Columbia Circuit vacated the district court's decisions and remanded the three cases to the district court for further proceedings. On June 28, 2016, the United States Supreme Court granted defendants' petitions for writ of certiorari to review the decisions of the United States Court of Appeals for the District of Columbia. On November 17, 2016, the United States Supreme Court dismissed the petitions as improvidently granted, and the three cases returned to the district court for further proceedings. The Company has entered into an agreement pursuant to which the Company will pay \$20.8 million to resolve the cases, subject to court approval.

AUTOMOBILE LENDING MATTERS On April 20, 2018, the Company entered into consent orders with the Office of the Comptroller of the Currency (OCC) and the Consumer Financial Protection Bureau (CFPB) to resolve, among other things, investigations by the agencies into the Company's compliance risk management

program and its past practices involving certain automobile collateral protection insurance (CPI) policies and certain mortgage interest rate lock extensions. The consent orders require remediation to customers and the payment of a total of \$1.0 billion in civil money penalties to the agencies. In July 2017, the Company announced a plan to remediate customers who may have been financially harmed due to issues related to automobile CPI policies purchased through a third-party vendor on their behalf. Multiple putative class action cases alleging, among other things, unfair and deceptive practices relating to these CPI policies, have been filed against the Company and consolidated into one multi-district litigation in the United States District Court for the Central District of California. The Company has reached an agreement to resolve the multi-district litigation pursuant to which the Company has agreed to pay, consistent with its remediation obligations under the consent orders, approximately \$689 million in remediation to customers with CPI policies placed between October 15, 2005, and September 30, 2016. The settlement amount is not incremental to the Company's remediation obligations under the consent orders, but instead encompasses those obligations, including remediation payments to date. The settlement amount is subject to change as the Company finalizes its remediation activity under the consent orders. In addition, the Company has agreed to contribute \$1 million to a common fund for the class. The district court granted final approval of the settlement on November 21, 2019. A putative class of shareholders also filed a securities fraud class action against the Company and its executive officers alleging material misstatements and omissions of CPI-related information in the Company's public disclosures. In January 2020, the court dismissed this action as to all defendants except the Company and a former executive officer and limited the action to two alleged misstatements. In addition, the Company is subject to a class action lawsuit in the United States District Court for the Central District of California alleging that customers are entitled to refunds related to the unused portion of guaranteed automobile protection (GAP) waiver or insurance agreements between the customer and dealer and, by assignment, the lender. Allegations related to the CPI and GAP programs are among the subjects of a shareholder derivative lawsuit pending in the United States District Court for the Northern District of California. These and other issues related to the origination, servicing, and collection of consumer auto loans, including related insurance products, have also subjected the Company to formal or informal inquiries, investigations, or examinations from federal and state government agencies. In December 2018, the Company entered into an agreement with all 50 state Attorneys General and the District of Columbia to resolve an investigation into the Company's retail sales practices, CPI and GAP, and mortgage interest rate lock matters, pursuant to which the Company paid \$575 million.

BANK SECRECY ACT/ANTI-MONEY LAUNDERING CONSENT ORDER INVESTIGATION On November 19, 2015, the Company entered into a consent order with the OCC, pursuant to which the Company was required to implement customer due diligence standards that include collection of current beneficial ownership information for certain business customers. On January 4, 2021, the OCC terminated the consent order. The Company has responded to inquiries from various federal government agencies regarding potentially inappropriate conduct in connection with the collection of beneficial ownership information.

COMMERCIAL LENDING SHAREHOLDER LITIGATION In October and November 2020, plaintiffs filed two putative class action lawsuits in the United States District Court for the Northern District of California alleging that the Company and certain of its former executive officers made false and misleading statements or omissions regarding, among other things, the Company's commercial lending underwriting practices, the credit quality of its commercial credit portfolios, and the value of its commercial loans, collateralized loan obligations and commercial mortgage-backed securities.

CONSENT ORDER DISCLOSURE LITIGATION Wells Fargo shareholders have brought a securities fraud class action in the United States District Court for the Southern District of New York alleging that the Company and certain of its current and former executive officers and directors made false or misleading statements regarding the Company's efforts to comply with the February 2018 consent order with the Federal Reserve Board and the April 2018 consent orders with the CFPB and OCC. Allegations related to the Company's efforts to comply with these three consent orders are also among the subjects of a shareholder derivative lawsuit pending in the United States District Court for the Northern District of California.

CONSUMER DEPOSIT ACCOUNT RELATED REGULATORY INVESTIGATION The CFPB is conducting an investigation into whether customers were unduly harmed by the Company's historical practices associated with the freezing (and, in many cases, closing) of consumer deposit accounts after the Company detected suspected fraudulent activity (by third parties or account holders) that affected those accounts.

CORONAVIRUS AID, RELIEF, AND ECONOMIC SECURITY ACT/ PAYCHECK PROTECTION PROGRAM Plaintiffs have filed putative class actions in various federal courts against the Company. The actions seek damages and injunctive relief related to the Company's offering of Paycheck Protection Program (PPP) loans under the Coronavirus Aid, Relief, and Economic Security Act, as well as claims for fees by purported agents who allegedly assisted customers with preparing PPP loan applications submitted to the Company. The Company has also received formal and informal inquiries from federal and state government agencies regarding its offering of PPP loans. In addition, Wells Fargo shareholders brought a securities fraud class action in the United States District Court for the Northern District of California alleging that the Company and certain of its executive officers made false or misleading statements regarding the Company's participation in the PPP and the Company's compliance with related regulations, which has been voluntarily dismissed.

FOREIGN EXCHANGE BUSINESS The United States Department of Justice (Department of Justice) is investigating certain activities in the Company's foreign exchange business, including whether customers may have received pricing inconsistent with commitments made to those customers. Previous investigations by other federal government agencies have been resolved.

INTERCHANGE LITIGATION Plaintiffs representing a putative class of merchants have filed putative class actions, and individual merchants have filed individual actions, against Wells Fargo Bank, N.A., Wells Fargo & Company, Wachovia Bank, N.A., and Wachovia Corporation regarding the interchange fees associated with Visa and MasterCard payment card transactions. Visa, MasterCard, and several other banks and bank holding companies are also named as defendants in these actions. These

actions have been consolidated in the United States District Court for the Eastern District of New York. The amended and consolidated complaint asserts claims against defendants based on alleged violations of federal and state antitrust laws and seeks damages, as well as injunctive relief. Plaintiff merchants allege that Visa, MasterCard, and payment card issuing banks unlawfully colluded to set interchange rates. Plaintiffs also allege that enforcement of certain Visa and MasterCard rules and alleged tying and bundling of services offered to merchants are anticompetitive. Wells Fargo and Wachovia, along with other defendants and entities, are parties to Loss and Judgment Sharing Agreements, which provide that they, along with other entities, will share, based on a formula, in any losses from the Interchange Litigation. On July 13, 2012, Visa, MasterCard, and the financial institution defendants, including Wells Fargo, signed a memorandum of understanding with plaintiff merchants to resolve the consolidated class action and reached a separate settlement in principle of the consolidated individual actions. The settlement payments to be made by all defendants in the consolidated class and individual actions totaled approximately \$6.6 billion before reductions applicable to certain merchants opting out of the settlement. The class settlement also provided for the distribution to class merchants of 10 basis points of default interchange across all credit rate categories for a period of eight consecutive months. The district court granted final approval of the settlement, which was appealed to the United States Court of Appeals for the Second Circuit by settlement objector merchants. Other merchants opted out of the settlement and are pursuing several individual actions. On June 30, 2016, the Second Circuit vacated the settlement agreement and reversed and remanded the consolidated action to the United States District Court for the Eastern District of New York for further proceedings. On November 23, 2016, prior class counsel filed a petition to the United States Supreme Court, seeking review of the reversal of the settlement by the Second Circuit, and the Supreme Court denied the petition on March 27, 2017. On November 30, 2016, the district court appointed lead class counsel for a damages class and an equitable relief class. The parties have entered into a settlement agreement to resolve the money damages class claims pursuant to which defendants will pay a total of approximately \$6.2 billion, which includes approximately \$5.3 billion of funds remaining from the 2012 settlement and \$900 million in additional funding. The Company's allocated responsibility for the additional funding is approximately \$94.5 million. The court granted final approval of the settlement on December 13, 2019, which was appealed to the United States Court of Appeals for the Second Circuit by settlement objector merchants. Several of the opt-out and direct action litigations have been settled while others remain pending. Discovery is proceeding in the opt-out litigations and the equitable relief class case.

LOW INCOME HOUSING TAX CREDITS Federal government agencies have undertaken formal or informal inquiries or investigations regarding the manner in which the Company purchased, and negotiated the purchase of, certain federal low income housing tax credits in connection with the financing of low income housing developments.

MOBILE DEPOSIT PATENT LITIGATION The Company is a defendant in two separate cases brought by United Services Automobile Association (USAA) in the United States District Court for the Eastern District of Texas alleging claims of patent infringement regarding mobile deposit capture technology patents held by USAA. Trial in the first case commenced on

Note 15: Legal Actions (continued)

October 30, 2019, and resulted in a \$200 million verdict against the Company. Trial in the second case commenced on January 6, 2020, and resulted in a \$102.7 million verdict against the Company. The Company has filed post-trial motions to, among other things, vacate the verdicts, and USAA has filed post-trial motions seeking future royalty payments and damages for willful infringement. In February 2021, the Company reached an agreement to settle the cases with USAA and obtained a license to the patents at issue.

MORTGAGE LOAN MODIFICATION MATTERS Plaintiffs representing a putative class of mortgage borrowers have filed separate putative class actions, *Hernandez v. Wells Fargo, et al.*, *Coordes v. Wells Fargo, et al.*, *Ryder v. Wells Fargo, Liguori v. Wells Fargo*, and *Dore v. Wells Fargo*, against Wells Fargo Bank, N.A., in the United States District Court for the Northern District of California, the United States District Court for the District of Washington, the United States District Court for the Southern District of Ohio, the United States District Court for the Southern District of New York, and the United States District Court for the Western District of Pennsylvania, respectively. Plaintiffs allege that Wells Fargo improperly denied mortgage loan modifications or repayment plans to customers in the foreclosure process due to the overstatement of foreclosure attorneys' fees that were included for purposes of determining whether a customer in the foreclosure process qualified for a mortgage loan modification or repayment plan. In March 2020, the Company entered into an agreement pursuant to which the Company paid \$18.5 million to resolve the claims of the initial certified class in the *Hernandez* case, which was approved by the district court in October 2020. The *Hernandez* settlement has been reopened to include additional borrowers who the Company determined should have been included in the settlement class because the Company identified a population of additional borrowers during the relevant class period whose loans had not previously been reviewed for inclusion in the original population of impacted customers. The identification of these additional borrowers will increase the potential class of mortgage borrowers in the other pending matters. In addition, government agencies have undertaken formal or informal inquiries or investigations regarding these and other mortgage servicing matters.

NOMURA/NATIXIS MORTGAGE-RELATED LITIGATION In August 2014 and August 2015, Nomura Credit & Capital Inc. (Nomura) and Natixis Real Estate Holdings, LLC (Natixis) filed a total of seven third-party complaints against Wells Fargo Bank, N.A., in New York state court. In the underlying first-party actions, Nomura and Natixis have been sued for alleged breaches of representations and warranties made in connection with residential mortgage-backed securities sponsored by them. In the third-party actions, Nomura and Natixis allege that Wells Fargo, as master servicer, primary servicer or securities administrator, failed to notify Nomura and Natixis of their own breaches, failed to properly oversee the primary servicers, and failed to adhere to accepted servicing practices. Natixis additionally alleges that Wells Fargo failed to perform default oversight duties. Wells Fargo has asserted counterclaims alleging that Nomura and Natixis failed to provide Wells Fargo notice of their representation and warranty breaches.

OFAC RELATED INVESTIGATION The Company has self-identified an issue whereby certain foreign banks utilized a Wells Fargo software-based solution to conduct import/export trade-related financing transactions with countries and entities prohibited by

the Office of Foreign Assets Control (OFAC) of the United States Department of the Treasury. We do not believe any funds related to these transactions flowed through accounts at Wells Fargo as a result of the aforementioned conduct. The Company has made voluntary self-disclosures to OFAC and is cooperating with an inquiry from the Department of Justice.

ORDER OF POSTING LITIGATION Plaintiffs filed a series of putative class actions against Wachovia Bank, N.A., and Wells Fargo Bank, N.A., as well as many other banks, challenging the "high to low" order in which the banks post debit card transactions to consumer deposit accounts. Most of these actions were consolidated in multi-district litigation proceedings (MDL proceedings) in the United States District Court for the Southern District of Florida. The court in the MDL proceedings has certified a class of putative plaintiffs, and Wells Fargo moved to compel arbitration of the claims of unnamed class members. The court denied the motions to compel arbitration in October 2016, and Wells Fargo appealed this decision to the United States Court of Appeals for the Eleventh Circuit. In May 2018, the Eleventh Circuit ruled in Wells Fargo's favor and found that Wells Fargo had not waived its arbitration rights and remanded the case to the district court for further proceedings. On September 26, 2019, the district court entered an order granting Wells Fargo's motion and dismissed the claims of unnamed class members in favor of arbitration. Plaintiffs appealed this decision to the United States Court of Appeals for the Eleventh Circuit.

RETAIL SALES PRACTICES MATTERS A number of bodies or entities, including (a) federal, state, and local government agencies, including the Department of Justice, the United States Securities and Exchange Commission (SEC), and the United States Department of Labor, (b) state attorneys general, including the New York Attorney General, and (c) Congressional committees, have undertaken formal or informal inquiries, investigations, or examinations arising out of certain retail sales practices of the Company that were the subject of settlements with the CFPB, the OCC, and the Office of the Los Angeles City Attorney announced by the Company on September 8, 2016. These matters are at varying stages. The Company has responded, and continues to respond, to requests from certain of the foregoing. In October 2018, the Company entered into an agreement to resolve the New York Attorney General's investigation pursuant to which the Company paid \$65 million to the State of New York. In December 2018, the Company entered into an agreement with all 50 state Attorneys General and the District of Columbia to resolve an investigation into the Company's retail sales practices, CPI and GAP, and mortgage interest rate lock matters, pursuant to which the Company paid \$575 million. On February 21, 2020, the Company entered into an agreement with the Department of Justice to resolve the Department of Justice's criminal investigation into the Company's retail sales practices, as well as a separate agreement to resolve the Department of Justice's civil investigation. As part of the Department of Justice criminal settlement, no charges will be filed against the Company provided the Company abides by all the terms of the agreement. The Department of Justice criminal settlement also includes the Company's agreement that the facts set forth in the settlement document constitute sufficient facts for the finding of criminal violations of statutes regarding bank records and personal information. On February 21, 2020, the Company also entered into an order to resolve the SEC's investigation arising out of the Company's retail sales practices. The SEC order contains a finding, to which the Company consented, that the facts set forth include violations of Section

10(b) of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder. As part of the resolution of the Department of Justice and SEC investigations, the Company has agreed to make payments totaling \$3.0 billion. In addition, as part of the settlements and included in the \$3.0 billion amount, the Company has agreed to the creation of a \$500 million Fair Fund for the benefit of investors who were harmed by the conduct covered in the SEC settlement.

In addition, a number of lawsuits have been filed by non-governmental parties seeking damages or other remedies related to these retail sales practices. First, various class plaintiffs, purporting to represent consumers who allege that they received products or services without their authorization or consent, have brought separate putative class actions against the Company in the United States District Court for the Northern District of California and various other jurisdictions. On June 14, 2018, the district court granted final approval of a settlement entered into by the Company in the first-filed action, *Jabbari v. Wells Fargo Bank, N.A.*, pursuant to which the Company paid \$142 million to resolve claims regarding certain products or services provided without authorization or consent for the time period May 1, 2002 to April 20, 2017. On July 20, 2020, the United States Court of Appeals for the Ninth Circuit affirmed the district court's order granting final approval of the settlement. Second, the Company was subject to a consolidated securities fraud class action alleging certain misstatements and omissions in the Company's disclosures related to sales practices matters. The Company entered into a settlement agreement to resolve this matter pursuant to which the Company paid \$480 million. Third, Wells Fargo shareholders have brought numerous shareholder derivative lawsuits asserting breach of fiduciary duty claims against, among others, current and former directors and officers for their alleged involvement with and failure to detect and prevent sales practices issues. The parties have entered into settlement agreements to resolve these lawsuits pursuant to which insurance carriers will pay the Company approximately \$240 million for alleged damage to the Company, and the Company will pay plaintiffs' attorneys' fees. The settlement agreements have received final approval from the courts. Fourth, a purported Employee Retirement Income Security Act (ERISA) class action was filed in the United States District Court for the District of Minnesota on behalf of 401(k) plan participants. The district court dismissed the action, and on July 27, 2020, the United States Court of Appeals for the Eighth Circuit affirmed the dismissal. The 401(k) plan participants have filed a writ of certiorari to the United States Supreme Court.

RMBS TRUSTEE LITIGATION In December 2014, Phoenix Light SF Limited and certain related entities and the National Credit Union Administration (NCUA) filed complaints in the United States District Court for the Southern District of New York against Wells Fargo Bank, N.A., alleging claims against the Company in its capacity as trustee for a number of residential mortgage-backed securities trusts. Complaints raising similar allegations have been filed by Commerzbank AG in the Southern District of New York and by IKB International and IKB Deutsche Industriebank in New York state court. In each case, the plaintiffs allege that Wells Fargo Bank, N.A., as trustee, caused losses to investors, and plaintiffs assert causes of action based upon, among other things, the trustee's alleged failure to notify and enforce repurchase obligations of mortgage loan sellers for purported breaches of representations and warranties, notify investors of alleged events of default, and abide by appropriate standards of care following alleged events of default. The Company previously settled two class action lawsuits with similar allegations that

were filed in November 2014 and December 2016 by institutional investors in the Southern District of New York and New York state court, respectively.

SEMINOLE TRIBE TRUSTEE LITIGATION The Seminole Tribe of Florida filed a complaint in Florida state court alleging that Wells Fargo, as trustee, charged excess fees in connection with the administration of a minor's trust and failed to invest the assets of the trust prudently. The complaint was later amended to include three individual current and former beneficiaries as plaintiffs and to remove the Tribe as a party to the case. In December 2016, the Company filed a motion to dismiss the amended complaint on the grounds that the Tribe is a necessary party and that the individual beneficiaries lack standing to bring claims. The motion was denied in June 2018. The case is pending trial.

OUTLOOK As described above, the Company establishes accruals for legal actions when potential losses associated with the actions become probable and the costs can be reasonably estimated. The high end of the range of reasonably possible potential losses in excess of the Company's accrual for probable and estimable losses was approximately \$2.4 billion as of December 31, 2020. The outcomes of legal actions are unpredictable and subject to significant uncertainties, and it is inherently difficult to determine whether any loss is probable or even possible. It is also inherently difficult to estimate the amount of any loss and there may be matters for which a loss is probable or reasonably possible but not currently estimable. Accordingly, actual losses may be in excess of the established accrual or the range of reasonably possible loss. Wells Fargo is unable to determine whether the ultimate resolution of the retail sales practices matters will have a material adverse effect on its consolidated financial condition. Based on information currently available, advice of counsel, available insurance coverage, and established reserves, Wells Fargo believes that the eventual outcome of other actions against Wells Fargo and/or its subsidiaries will not, individually or in the aggregate, have a material adverse effect on Wells Fargo's consolidated financial condition. However, it is possible that the ultimate resolution of a matter, if unfavorable, may be material to Wells Fargo's results of operations for any particular period.

**CITY OF CHICAGO
ECONOMIC DISCLOSURE STATEMENT
AND AFFIDAVIT**

SECTION I -- GENERAL INFORMATION

A. Legal name of the Disclosing Party submitting this EDS. Include d/b/a/ if applicable:

WFC Holdings, LLC

Check ONE of the following three boxes:

Indicate whether the Disclosing Party submitting this EDS is:

1. the Applicant

OR

2. a legal entity currently holding, or anticipated to hold within six months after City action on the contract, transaction or other undertaking to which this EDS pertains (referred to below as the "Matter"), a direct or indirect interest in excess of 7.5% in the Applicant. State the Applicant's legal name: _____

OR

3. a legal entity with a direct or indirect right of control of the Applicant (see Section II(B)(1)) State the legal name of the entity in which the Disclosing Party holds a right of control:

Wells Fargo Bank, N.A.

B. Business address of the Disclosing Party: 420 Montgomery Street, San Francisco, CA 94163

C. Telephone: 312-630-2234 Fax: Not available

Email: Mark.Lester@wellsfargo.com

D. Name of contact person: Mark Lester

E. Federal Employer Identification No. (if you have one): 41-1921346

F. Brief description of the Matter to which this EDS pertains. (Include project number and location of property, if applicable):

Banking Services

G. Which City agency or department is requesting this EDS? Office of Finance

If the Matter is a contract being handled by the City's Department of Procurement Services, please complete the following:

Specification # 1231948 and Contract # _____

SECTION II -- DISCLOSURE OF OWNERSHIP INTERESTS

A. NATURE OF THE DISCLOSING PARTY

1. Indicate the nature of the Disclosing Party:

- Person
- Limited liability company
- Publicly registered business corporation
- Limited liability partnership
- Privately held business corporation
- Joint venture
- Sole proprietorship
- Not-for-profit corporation
- General partnership
- (Is the not-for-profit corporation also a 501(c)(3))?
- Limited partnership
- Yes No
- Trust
- Other (please specify)

2. For legal entities, the state (or foreign country) of incorporation or organization, if applicable:

Delaware

3. For legal entities not organized in the State of Illinois: Has the organization registered to do business in the State of Illinois as a foreign entity?

- Yes
- No
- Organized in Illinois

B. IF THE DISCLOSING PARTY IS A LEGAL ENTITY:

1. List below the full names and titles, if applicable, of: (i) all executive officers and all directors of the entity; (ii) **for not-for-profit corporations**, all members, if any, which are legal entities (if there are no such members, write "no members which are legal entities"); (iii) **for trusts, estates or other similar entities**, the trustee, executor, administrator, or similarly situated party; (iv) **for general or limited partnerships, limited liability companies, limited liability partnerships or joint ventures**, each general partner, managing member, manager or any other person or legal entity that directly or indirectly controls the day-to-day management of the Applicant.

NOTE: Each legal entity listed below must submit an EDS on its own behalf.

Name	Title
------	-------

Please see Attachment A (eDocs#21977222)

2. Please provide the following information concerning each person or legal entity having a direct or indirect, current or prospective (i.e. within 6 months after City action) beneficial interest (including ownership) in excess of 7.5% of the Applicant. Examples of such an interest include shares in a corporation, partnership interest in a partnership or joint venture, interest of a member or manager in a

limited liability company, or interest of a beneficiary of a trust, estate or other similar entity. If none, state None.

NOTE: Each legal entity listed below may be required to submit an EDS on its own behalf.

Name	Business Address	Percentage Interest in the Applicant
------	------------------	--------------------------------------

Please see Attachment B.1 (eDocs#21977220) and Attachment B.2 (eDocs # 21971548)

SECTION III -- INCOME OR COMPENSATION TO, OR OWNERSHIP BY, CITY ELECTED OFFICIALS

Has the Disclosing Party provided any income or compensation to any City elected official during the 12-month period preceding the date of this EDS? Yes No

Does the Disclosing Party reasonably expect to provide any income or compensation to any City elected official during the 12-month period following the date of this EDS? Yes No

If yes to either of the above, please identify below the name(s) of such City elected official(s) and describe such income or compensation:

Please see Attachment C (eDocs#21971321)

Does any City elected official or, to the best of the Disclosing Party's knowledge after reasonable inquiry, any City elected official's spouse or domestic partner, have a financial interest (as defined in Chapter 2-156 of the Municipal Code of Chicago (MCC)) in the Disclosing Party?

Yes No

If "yes," please identify below the name(s) of such City elected official(s) and/or spouse(s)/domestic partner(s) and describe the financial interest(s).

Please see Attachment C (eDocs# 21971321)

SECTION IV -- DISCLOSURE OF SUBCONTRACTORS AND OTHER RETAINED PARTIES

The Disclosing Party must disclose the name and business address of each subcontractor, attorney, lobbyist (as defined in MCC Chapter 2-156), accountant, consultant and any other person or entity whom the Disclosing Party has retained or expects to retain in connection with the Matter, as well as the nature of the relationship, and the total amount of the fees paid or estimated to be paid. The Disclosing Party is not required to disclose employees who are paid solely through the Disclosing Party's regular payroll. If the Disclosing Party is uncertain whether a disclosure is required under this Section, the Disclosing Party must either ask the City whether disclosure is required or make the disclosure.

Name (indicate whether retained or anticipated to be retained)	Business Address	Relationship to Disclosing Party (subcontractor, attorney, lobbyist, etc.)	Fees (indicate whether paid or estimated.) NOTE: hourly rate or t.b.d. is not an acceptable response.
---	------------------	--	--

None

(Add sheets if necessary)

Check here if the Disclosing Party has not retained, nor expects to retain, any such persons or entities.

SECTION V -- CERTIFICATIONS

A. COURT-ORDERED CHILD SUPPORT COMPLIANCE

Under MCC Section 2-92-415, substantial owners of business entities that contract with the City must remain in compliance with their child support obligations throughout the contract's term.

Has any person who directly or indirectly owns 10% or more of the Disclosing Party been declared in arrearage on any child support obligations by any Illinois court of competent jurisdiction?

Yes No No person directly or indirectly owns 10% or more of the Disclosing Party.

If Yes, has the person entered into a court-approved agreement for payment of all support owed and is the person in compliance with that agreement?

Yes No

B. FURTHER CERTIFICATIONS

1. [This paragraph 1 applies only if the Matter is a contract being handled by the City's Department of Procurement Services.] In the 5-year period preceding the date of this EDS, neither the Disclosing Party nor any Affiliated Entity [see definition in (5) below] has engaged, in connection with the performance of any public contract, the services of an integrity monitor, independent private sector inspector general, or integrity compliance consultant (i.e., an individual or entity with legal, auditing, investigative, or other similar skills, designated by a public agency to help the agency monitor the activity of specified agency vendors as well as help the vendors reform their business practices so they can be considered for agency contracts in the future, or continue with a contract in progress).

2. The Disclosing Party and its Affiliated Entities are not delinquent in the payment of any fine, fee, tax or other source of indebtedness owed to the City of Chicago, including, but not limited to, water and sewer charges, license fees, parking tickets, property taxes and sales taxes, nor is the Disclosing Party delinquent in the payment of any tax administered by the Illinois Department of Revenue.

3. The Disclosing Party and, if the Disclosing Party is a legal entity, all of those persons or entities identified in Section II(B)(1) of this EDS:
- a. are not presently debarred, suspended, proposed for debarment, declared ineligible or voluntarily excluded from any transactions by any federal, state or local unit of government;
 - b. have not, during the 5 years before the date of this EDS, been convicted of a criminal offense, adjudged guilty, or had a civil judgment rendered against them in connection with: obtaining, attempting to obtain, or performing a public (federal, state or local) transaction or contract under a public transaction; a violation of federal or state antitrust statutes; fraud; embezzlement; theft; forgery; bribery; falsification or destruction of records; making false statements; or receiving stolen property;
 - c. are not presently indicted for, or criminally or civilly charged by, a governmental entity (federal, state or local) with committing any of the offenses set forth in subparagraph (b) above;
 - d. have not, during the 5 years before the date of this EDS, had one or more public transactions (federal, state or local) terminated for cause or default; and
 - e. have not, during the 5 years before the date of this EDS, been convicted, adjudged guilty, or found liable in a civil proceeding, or in any criminal or civil action, including actions concerning environmental violations, instituted by the City or by the federal government, any state, or any other unit of local government.
4. The Disclosing Party understands and shall comply with the applicable requirements of MCC Chapters 2-56 (Inspector General) and 2-156 (Governmental Ethics).
5. Certifications (5), (6) and (7) concern:
- the Disclosing Party;
 - any Contractor (meaning any contractor or subcontractor used by the Disclosing Party in connection with the Matter, including but not limited to all persons or legal entities disclosed under Section IV, Disclosure of Subcontractors and Other Retained Parties);
 - any "Affiliated Entity" (meaning a person or entity that, directly or indirectly: controls the Disclosing Party, is controlled by the Disclosing Party, or is, with the Disclosing Party, under common control of another person or entity). Indicia of control include, without limitation: interlocking management or ownership; identity of interests among family members, shared facilities and equipment; common use of employees; or organization of a business entity following the ineligibility of a business entity to do business with federal or state or local government, including the City, using substantially the same management, ownership, or principals as the ineligible entity. With respect to Contractors, the term Affiliated Entity means a person or entity that directly or indirectly controls the Contractor, is controlled by it, or, with the Contractor, is under common control of another person or entity;
 - any responsible official of the Disclosing Party, any Contractor or any Affiliated Entity or any other official, agent or employee of the Disclosing Party, any Contractor or any Affiliated Entity, acting pursuant to the direction or authorization of a responsible official of the Disclosing Party, any Contractor or any Affiliated Entity (collectively "Agents").

Neither the Disclosing Party, nor any Contractor, nor any Affiliated Entity of either the Disclosing Party or any Contractor, nor any Agents have, during the 5 years before the date of this EDS, or, with respect to a Contractor, an Affiliated Entity, or an Affiliated Entity of a Contractor during the 5 years before the date of such Contractor's or Affiliated Entity's contract or engagement in connection with the Matter:

- a. bribed or attempted to bribe, or been convicted or adjudged guilty of bribery or attempting to bribe, a public officer or employee of the City, the State of Illinois, or any agency of the federal government or of any state or local government in the United States of America, in that officer's or employee's official capacity;
 - b. agreed or colluded with other bidders or prospective bidders, or been a party to any such agreement, or been convicted or adjudged guilty of agreement or collusion among bidders or prospective bidders, in restraint of freedom of competition by agreement to bid a fixed price or otherwise; or
 - c. made an admission of such conduct described in subparagraph (a) or (b) above that is a matter of record, but have not been prosecuted for such conduct; or
 - d. violated the provisions referenced in MCC Subsection 2-92-320(a)(4)(Contracts Requiring a Base Wage); (a)(5)(Debarment Regulations); or (a)(6)(Minimum Wage Ordinance).
6. Neither the Disclosing Party, nor any Affiliated Entity or Contractor, or any of their employees, officials, agents or partners, is barred from contracting with any unit of state or local government as a result of engaging in or being convicted of (1) bid-rigging in violation of 720 ILCS 5/33E-3; (2) bid-rotating in violation of 720 ILCS 5/33E-4; or (3) any similar offense of any state or of the United States of America that contains the same elements as the offense of bid-rigging or bid-rotating.
7. Neither the Disclosing Party nor any Affiliated Entity is listed on a Sanctions List maintained by the United States Department of Commerce, State, or Treasury, or any successor federal agency.
8. [FOR APPLICANT ONLY] (i) Neither the Applicant nor any controlling person [see MCC Chapter 1-23, Article I for applicability and defined terms] of the Applicant is currently indicted or charged with, or has admitted guilt of, or has ever been convicted of, or placed under supervision for, any criminal offense involving actual, attempted, or conspiracy to commit bribery, theft, fraud, forgery, perjury, dishonesty or deceit against an officer or employee of the City or any sister agency; and (ii) the Applicant understands and acknowledges that compliance with Article I is a continuing requirement for doing business with the City. NOTE: If MCC Chapter 1-23, Article I applies to the Applicant, that Article's permanent compliance timeframe supersedes 5-year compliance timeframes in this Section V.
9. [FOR APPLICANT ONLY] The Applicant and its Affiliated Entities will not use, nor permit their subcontractors to use, any facility listed as having an active exclusion by the U.S. EPA on the federal System for Award Management (SAM).
10. [FOR APPLICANT ONLY] The Applicant will obtain from any contractors/subcontractors hired or to be hired in connection with the Matter certifications equal in form and substance to those in Certifications (2) and (9) above and will not, without the prior written consent of the City, use any such

contractor/subcontractor that does not provide such certifications or that the Applicant has reason to believe has not provided or cannot provide truthful certifications.

11. If the Disclosing Party is unable to certify to any of the above statements in this Part B (Further Certifications), the Disclosing Party must explain below:

Please see EDOCS # 21957258 (Attachment D) and supporting attachments: #2197617, 21971629, 21971631, 21971634.

In addition, at this time, Wells Fargo Clearing Services, LLC, DBA Wells Fargo Advisors ("WFA") is delinquent in the renewal of its business license. This delinquency is due to issues that WFA is experiencing with the update of the required personal information for the Owners. Wells Fargo Advisors is continuing to work towards the resolution of this issue and hopes to remedy shortly.

If the letters "NA," the word "None," or no response appears on the lines above, it will be conclusively presumed that the Disclosing Party certified to the above statements.

12. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all current employees of the Disclosing Party who were, at any time during the 12-month period preceding the date of this EDS, an employee, or elected or appointed official, of the City of Chicago (if none, indicate with N/A or none).

None

13. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all gifts that the Disclosing Party has given or caused to be given, at any time during the 12-month period preceding the execution date of this EDS, to an employee, or elected or appointed official, of the City of Chicago. For purposes of this statement, a gift does not include: (i) anything made generally available to City employees or to the general public, or (ii) food or drink provided in the course of official City business and having a retail value of less than \$25 per recipient, or (iii) a political contribution otherwise duly reported as required by law (if none, indicate with N/A or none). As to any gift listed below, please also list the name of the City recipient.

None

C. CERTIFICATION OF STATUS AS FINANCIAL INSTITUTION

1. The Disclosing Party certifies that the Disclosing Party (check one)

is is not

a "financial institution" as defined in MCC Section 2-32-455(b).

2. If the Disclosing Party IS a financial institution, then the Disclosing Party pledges:

"We are not and will not become a predatory lender as defined in MCC Chapter 2-32. We further

pledge that none of our affiliates is, and none of them will become, a predatory lender as defined in MCC Chapter 2-32. We understand that becoming a predatory lender or becoming an affiliate of a predatory lender may result in the loss of the privilege of doing business with the City."

If the Disclosing Party is unable to make this pledge because it or any of its affiliates (as defined in MCC Section 2-32-455(b)) is a predatory lender within the meaning of MCC Chapter 2-32, explain here (attach additional pages if necessary):

If the letters "NA," the word "None," or no response appears on the lines above, it will be conclusively presumed that the Disclosing Party certified to the above statements.

D. CERTIFICATION REGARDING FINANCIAL INTEREST IN CITY BUSINESS

Any words or terms defined in MCC Chapter 2-156 have the same meanings if used in this Part D.

1. In accordance with MCC Section 2-156-110: To the best of the Disclosing Party's knowledge after reasonable inquiry, does any official or employee of the City have a financial interest in his or her own name or in the name of any other person or entity in the Matter?

Yes No

NOTE: If you checked "Yes" to Item D(1), proceed to Items D(2) and D(3). If you checked "No" to Item D(1), skip Items D(2) and D(3) and proceed to Part E.

2. Unless sold pursuant to a process of competitive bidding, or otherwise permitted, no City elected official or employee shall have a financial interest in his or her own name or in the name of any other person or entity in the purchase of any property that (i) belongs to the City, or (ii) is sold for taxes or assessments, or (iii) is sold by virtue of legal process at the suit of the City (collectively, "City Property Sale"). Compensation for property taken pursuant to the City's eminent domain power does not constitute a financial interest within the meaning of this Part D.

Does the Matter involve a City Property Sale?

Yes No

3. If you checked "Yes" to Item D(1), provide the names and business addresses of the City officials or employees having such financial interest and identify the nature of the financial interest:

Name	Business Address	Nature of Financial Interest
_____	_____	_____
_____	_____	_____
_____	_____	_____

4. The Disclosing Party further certifies that no prohibited financial interest in the Matter will be acquired by any City official or employee.

E. CERTIFICATION REGARDING SLAVERY ERA BUSINESS

Please check either (1) or (2) below. If the Disclosing Party checks (2), the Disclosing Party must disclose below or in an attachment to this EDS all information required by (2). Failure to comply with these disclosure requirements may make any contract entered into with the City in connection with the Matter voidable by the City.

 1. The Disclosing Party verifies that the Disclosing Party has searched any and all records of the Disclosing Party and any and all predecessor entities regarding records of investments or profits from slavery or slaveholder insurance policies during the slavery era (including insurance policies issued to slaveholders that provided coverage for damage to or injury or death of their slaves), and the Disclosing Party has found no such records.

 X 2. The Disclosing Party verifies that, as a result of conducting the search in step (1) above, the Disclosing Party has found records of investments or profits from slavery or slaveholder insurance policies. The Disclosing Party verifies that the following constitutes full disclosure of all such records, including the names of any and all slaves or slaveholders described in those records:

Please see Attachment E (eDocs# 21971380)

SECTION VI -- CERTIFICATIONS FOR FEDERALLY FUNDED MATTERS

NOTE: If the Matter is federally funded, complete this Section VI. If the Matter is not federally funded, proceed to Section VII. For purposes of this Section VI, tax credits allocated by the City and proceeds of debt obligations of the City are not federal funding.

A. CERTIFICATION REGARDING LOBBYING – N/A

1. List below the names of all persons or entities registered under the federal Lobbying Disclosure Act of 1995, as amended, who have made lobbying contacts on behalf of the Disclosing Party with respect to the Matter: (Add sheets if necessary):

(If no explanation appears or begins on the lines above, or if the letters "NA" or if the word "None" appear, it will be conclusively presumed that the Disclosing Party means that NO persons or entities registered under the Lobbying Disclosure Act of 1995, as amended, have made lobbying contacts on behalf of the Disclosing Party with respect to the Matter.)

2. The Disclosing Party has not spent and will not expend any federally appropriated funds to pay any person or entity listed in paragraph A(1) above for his or her lobbying activities or to pay any person or entity to influence or attempt to influence an officer or employee of any agency, as defined by applicable federal law, a member of Congress, an officer or employee of Congress, or an employee

of a member of Congress, in connection with the award of any federally funded contract, making any federally funded grant or loan, entering into any cooperative agreement, or to extend, continue, renew, amend, or modify any federally funded contract, grant, loan, or cooperative agreement.

3. The Disclosing Party will submit an updated certification at the end of each calendar quarter in which there occurs any event that materially affects the accuracy of the statements and information set forth in paragraphs A(1) and A(2) above.

4. The Disclosing Party certifies that either: (i) it is not an organization described in section 501(c)(4) of the Internal Revenue Code of 1986; or (ii) it is an organization described in section 501(c)(4) of the Internal Revenue Code of 1986 but has not engaged and will not engage in "Lobbying Activities," as that term is defined in the Lobbying Disclosure Act of 1995, as amended.

5. If the Disclosing Party is the Applicant, the Disclosing Party must obtain certifications equal in form and substance to paragraphs A(1) through A(4) above from all subcontractors before it awards any subcontract and the Disclosing Party must maintain all such subcontractors' certifications for the duration of the Matter and must make such certifications promptly available to the City upon request.

B. CERTIFICATION REGARDING EQUAL EMPLOYMENT OPPORTUNITY – N/A

If the Matter is federally funded, federal regulations require the Applicant and all proposed subcontractors to submit the following information with their bids or in writing at the outset of negotiations.

Is the Disclosing Party the Applicant?

Yes

No

If Yes, answer the three questions below:

1. Have you developed and do you have on file affirmative action programs pursuant to applicable federal regulations? (See 41 CFR Part 60-2.)

Yes

No

2. Have you filed with the Joint Reporting Committee, the Director of the Office of Federal Contract Compliance Programs, or the Equal Employment Opportunity Commission all reports due under the applicable filing requirements?

Yes

No

Reports not required

3. Have you participated in any previous contracts or subcontracts subject to the equal opportunity clause?

Yes

No

If you checked No to question (1) or (2) above, please provide an explanation:

SECTION VII -- FURTHER ACKNOWLEDGMENTS AND CERTIFICATION

The Disclosing Party understands and agrees that:

- A. The certifications, disclosures, and acknowledgments contained in this EDS will become part of any contract or other agreement between the Applicant and the City in connection with the Matter, whether procurement, City assistance, or other City action, and are material inducements to the City's execution of any contract or taking other action with respect to the Matter. The Disclosing Party understands that it must comply with all statutes, ordinances, and regulations on which this EDS is based.
- B. The City's Governmental Ethics Ordinance, MCC Chapter 2-156, imposes certain duties and obligations on persons or entities seeking City contracts, work, business, or transactions. The full text of this ordinance and a training program is available on line at www.cityofchicago.org/Ethics, and may also be obtained from the City's Board of Ethics, 740 N. Sedgwick St., Suite 500, Chicago, IL 60610, (312) 744-9660. The Disclosing Party must comply fully with this ordinance.
- C. If the City determines that any information provided in this EDS is false, incomplete or inaccurate, any contract or other agreement in connection with which it is submitted may be rescinded or be void or voidable, and the City may pursue any remedies under the contract or agreement (if not rescinded or void), at law, or in equity, including terminating the Disclosing Party's participation in the Matter and/or declining to allow the Disclosing Party to participate in other City transactions. Remedies at law for a false statement of material fact may include incarceration and an award to the City of treble damages.
- D. It is the City's policy to make this document available to the public on its Internet site and/or upon request. Some or all of the information provided in, and appended to, this EDS may be made publicly available on the Internet, in response to a Freedom of Information Act request, or otherwise. By completing and signing this EDS, the Disclosing Party waives and releases any possible rights or claims which it may have against the City in connection with the public release of information contained in this EDS and also authorizes the City to verify the accuracy of any information submitted in this EDS.
- E. The information provided in this EDS must be kept current. In the event of changes, the Disclosing Party must supplement this EDS up to the time the City takes action on the Matter. If the Matter is a contract being handled by the City's Department of Procurement Services, the Disclosing Party must update this EDS as the contract requires. **NOTE:** With respect to Matters subject to MCC Chapter 1-23, Article I (imposing **PERMANENT INELIGIBILITY** for certain specified offenses), the information provided herein regarding eligibility must be kept current for a longer period, as required by MCC Chapter 1-23 and Section 2-154-020.

CERTIFICATION

Under penalty of perjury, the person signing below: (1) warrants that he/she is authorized to execute this EDS, and all applicable Appendices, on behalf of the Disclosing Party, and (2) warrants that all certifications and statements contained in this EDS, and all applicable Appendices, are true, accurate and complete as of the date furnished to the City.

**CITY OF CHICAGO
ECONOMIC DISCLOSURE STATEMENT AND AFFIDAVIT
APPENDIX A**

**FAMILIAL RELATIONSHIPS WITH ELECTED CITY OFFICIALS
AND DEPARTMENT HEADS**

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5%. It is not to be completed by any legal entity which has only an indirect ownership interest in the Applicant.

Under MCC Section 2-154-015, the Disclosing Party must disclose whether such Disclosing Party or any Applicable Party or any Spouse or Domestic Partner thereof currently has a familial relationship with any elected city official or department head. A familial relationship exists if, as of the date this EDS is signed, the Disclosing Party or any Applicable Party or any Spouse or Domestic Partner thereof is related to the mayor, any alderman, the city clerk, the city treasurer or any city department head as spouse or domestic partner or as any of the following, whether by blood or adoption: parent, child, brother or sister, aunt or uncle, niece or nephew, grandparent, grandchild, father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather or stepmother, stepson or stepdaughter, stepbrother or stepsister or half-brother or half-sister.

Applicable Party means (1) all executive officers of the Disclosing Party listed in Section II.B.1.a., if the Disclosing Party is a corporation; all partners of the Disclosing Party, if the Disclosing Party is a general partnership; all general partners and limited partners of the Disclosing Party, if the Disclosing Party is a limited partnership; all managers, managing members and members of the Disclosing Party, if the Disclosing Party is a limited liability company; (2) all principal officers of the Disclosing Party; and (3) any person having more than a 7.5% ownership interest in the Disclosing Party. Principal officers means the president, chief operating officer, executive director, chief financial officer, treasurer or secretary of a legal entity or any person exercising similar authority.

Does the Disclosing Party or any Applicable Party or any Spouse or Domestic Partner thereof currently have a familial relationship with an elected city official or department head?

[] Yes [X] No

If yes, please identify below (1) the name and title of such person, (2) the name of the legal entity to which such person is connected; (3) the name and title of the elected city official or department head to whom such person has a familial relationship, and (4) the precise nature of such familial relationship.

BUILDING CODE SCOFFLAW/PROBLEM LANDLORD CERTIFICATION

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5% (an "Owner"). It is not to be completed by any legal entity which has only an indirect ownership interest in the Applicant.

1. Pursuant to MCC Section 2-154-010, is the Applicant or any Owner identified as a building code scofflaw or problem landlord pursuant to MCC Section 2-92-416?

Yes No

2. If the Applicant is a legal entity publicly traded on any exchange, is any officer or director of the Applicant identified as a building code scofflaw or problem landlord pursuant to MCC Section 2-92-416?

Yes No The Applicant is not publicly traded on any exchange.

3. If yes to (1) or (2) above, please identify below the name of each person or legal entity identified as a building code scofflaw or problem landlord and the address of each building or buildings to which the pertinent code violations apply.

ECONOMIC DISCLOSURE STATEMENT AND AFFIDAVIT
APPENDIX C**

PROHIBITION ON WAGE & SALARY HISTORY SCREENING - CERTIFICATION

This Appendix is to be completed only by an Applicant that is completing this EDS as a “contractor” as defined in MCC Section 2-92-385. That section, which should be consulted (www.amlegal.com), generally covers a party to any agreement pursuant to which they: (i) receive City of Chicago funds in consideration for services, work or goods provided (including for legal or other professional services), or (ii) pay the City money for a license, grant or concession allowing them to conduct a business on City premises.

On behalf of an Applicant that is a contractor pursuant to MCC Section 2-92-385, I hereby certify that the Applicant is in compliance with MCC Section 2-92-385(b)(1) and (2), which prohibit: (i) screening job applicants based on their wage or salary history, or (ii) seeking job applicants’ wage or salary history from current or former employers. I also certify that the Applicant has adopted a policy that includes those prohibitions.

Yes

No

N/A – I am not an Applicant that is a “contractor” as defined in MCC Section 2-92-385.

This certification shall serve as the affidavit required by MCC Section 2-92-385(c)(1).

If you checked “no” to the above, please explain.

WFC Holdings, LLC a legal entity with a direct or indirect right of control of Wells Fargo Bank, N.A.
(the “Applicant”).

Attachment "C"

Section III – Income or Compensation to, or Ownership by, City Elected Officials

The undersigned warrants, to the best of his knowledge after due inquiry, that the Disclosing Party has not provided any income or compensation to any City elected official in 12 months before, nor does the undersigned reasonably expect to during the 12-month period following, the date the undersigned has signed this EDS. As the date of this filing, the undersigned is in the process of completing our due diligence on Independent Contracts, when completed we will update this response if needed.

Note that in the ordinary course of its business, Wells Fargo makes loans of various types with individuals and businesses. We have determined that these loans do not constitute a "business relationship" as defined in Chapter 2-156 of the Municipal Code.

Note further that the Disclosing Party has no way of identifying spouses or domestic partners of any City elected official, or the identities of any entities in which any city elected official or his or her spouse or domestic partner has a financial interest, and thus limits its certification to "City elected officials" as specially required by Section III. Specifically, we made due inquiry with respect to the City's Aldermen, the Mayor, the Treasurer and the City Clerk.

ATTACHMENT E

SLAVERY ERA BUSINESS SUMMARY

After years of research, Wells Fargo has found no records that indicate it – or any entities it acquired before the Wachovia merger – had ever financed slavery, held slaves as collateral, owned slaves, or profited from slavery.

With the Wachovia merger, Wells Fargo inherited hundreds of Wachovia's predecessor financial institutions, including two that had extensive involvement in slavery. In 2005 Wachovia announced these findings and apologized for the role its predecessors played and renewed its commitment to preserve and promote the history of the African-American experience in our nation. Wells Fargo shares that commitment and affirms its long-standing opposition to slavery.

Furthermore, Wells Fargo has found no records that any entities it acquired subsequent to the Wachovia merger – had ever financed slavery, held slaves as collateral, owned slaves, or profited from slavery, which research has been updated to include all legal entities acquired since its last submission of December, 2017.

The following narrative summarizes the results of the research that has been performed regarding Wachovia Bank and its ties to slavery.

SUMMARY OF RESEARCH

External research has revealed that two predecessor institutions of the undersigned, the Georgia Railroad & Banking Company and the Bank of Charleston, owned slaves.

Due to incomplete records, the undersigned cannot determine exactly how many slaves either the Georgia Railroad and Banking Company or the Bank of Charleston owned. Through specific transactional records, researchers determined that the Georgia Railroad and Banking Company owned at least 162 slaves, and the Bank of Charleston accepted at least 529 slaves as collateral on mortgaged properties or loans, and acquired an undetermined number of these individuals when customers defaulted on their loans.

The Georgia Railroad and Banking Company was founded in 1833 to complete a railroad line between the City of Augusta and the interior of the state of Georgia. The company relied on slave labor for the construction and maintenance of this railway. According to the existing and searchable bank records, 162 slaves were owned or authorized to be purchased by the Georgia Railroad and Banking Company between 1836 and 1842. In addition, the company awarded work to contractors who purchased at least 400 slaves to perform work on the railways.

The Bank of Charleston, founded in 1834, issued loans and mortgages where enslaved individuals were used as collateral. A review of the bank's account ledgers revealed a minimum of 24 transactions involving reference to 529 enslaved individuals being used

as collateral. In most cases, the loan was paid on schedule, and the bank never took possession of slaves that were pledged as collateral on the loan. In several documented instances, however, customers defaulted on their loans and the Bank of Charleston took actual possession of slaves. The total number of slaves of whom the bank took possession cannot be accurately tallied due to the lack of records.

In addition, ten predecessor companies were determined to have profited more indirectly from slavery through the following means:

- Founders, directors, or account holders who owned slaves and/or profited directly from slavery;
- Investing in or transacting business with companies or individuals that owned slaves;
- Investing in the bonds of slave states and municipalities;
- Investing in U.S. government bonds during years when the United States permitted and profited from slave labor directly through taxation.

These institutions are:

- Bank of North America (Philadelphia, Pa.)
- Bank of Baltimore
- The Philadelphia Bank (later Philadelphia National Bank)
- Farmers' & Mechanics' Bank of Philadelphia
- Pennsylvania Company for Insurances on Lives and the Granting of Annuities
- State Bank of Elizabeth (Elizabeth, N.J.)
- State Bank of Newark (Newark, N.J.)
- Savings Bank of Baltimore
- Girard National Bank
- The Carswell Group (established in 1868, acquired by Palmer & Cay, Inc. in 1985)
- The Trenton Banking Company

Attachment “B.2”

Section II – Disclosure of Ownership Interests

Based on the Notice of Annual Meeting and Proxy Statement dated March 16, 2021 of Wells Fargo & Company (“Wells Fargo”), The Vanguard Group, Inc. and certain entities controlled or under common control with The Vanguard Group, Inc. (collectively the “Reporting Persons”) held approximately 7.65% of outstanding publicly traded common stock of Wells Fargo as of that date. On information and belief, and in reliance on the statements made by The Vanguard Group, Inc. in Schedule 13G filed with the SEC on February 10, 2021, the reported holdings represented shares of Wells Fargo’s common stock acquired by the Reporting Persons as passive investors and held in the ordinary course of business, without any intent to acquire, change, or influence control of Wells Fargo. Wells Fargo does not know if the Reporting Persons currently hold more than 7.5% of its outstanding common stock. In any event, Wells Fargo has no authority or ability to require the Reporting Persons to file, and the Reporting Persons are under no obligation to assist or cooperate with Wells Fargo in filing, an EDS.

Total Loss Absorbing Capacity (TLAC)	25.18	25.74	23.27		

NM – Not meaningful

- Pre-tax pre-provision profit (PTPP) is total revenue less noninterest expense. Management believes that PTPP is a useful financial measure because it enables investors and others to assess the Company's ability to generate capital to cover credit losses through a credit cycle.
- Book value per common share is common stockholders' equity divided by common shares outstanding. Tangible book value per common share is tangible common equity divided by common shares outstanding.
- Tangible common equity is a non-GAAP financial measure and represents total equity less preferred equity, noncontrolling interests, goodwill, certain identifiable intangible assets (other than mortgage servicing rights) and goodwill and other intangibles on nonmarketable equity securities, net of applicable deferred taxes. The methodology of determining tangible common equity may differ among companies. Management believes that return on average tangible common equity and tangible book value per common share, which utilize tangible common equity, are useful financial measures because they enable management, investors, and others to assess the Company's use of equity. For additional information, including a corresponding reconciliation to generally accepted accounting principles (GAAP) financial measures, see the "Capital Management – Tangible Common Equity" section in this Report.
- Represents Wells Fargo net income (loss) divided by average assets.
- Represents Wells Fargo net income (loss) applicable to common stock divided by average common stockholders' equity.
- The efficiency ratio is noninterest expense divided by total revenue (net interest income and noninterest income).
- Beginning January 1, 2018, the requirements for calculating common equity tier 1 (CET1) and tier 1 capital, along with risk-weighted assets (RWAs), became fully phased-in. Accordingly, the information presented reflects fully phased-in CET1, tier 1 capital, and RWAs, but reflects total capital still in accordance with transition requirements. See the "Capital Management" section and Note 23 (Regulatory Capital Requirements and Other Restrictions) to Financial Statements in this Report for additional information.

This Quarterly Report, including the Financial Review and the Financial Statements and related Notes, contains forward-looking statements, which may include forecasts of our financial results and condition, expectations for our operations and business, and our assumptions for those forecasts and expectations. Do not unduly rely on forward-looking statements. Actual results may differ materially from our forward-looking statements due to several factors. Factors that could cause our actual results to differ materially from our forward-looking statements are described in this Report, including in the “Forward-Looking Statements” section, and in the “Risk Factors” and “Regulation and Supervision” sections of our Annual Report on Form 10-K for the year ended December 31, 2020 (2020 Form 10-K).

When we refer to “Wells Fargo,” “the Company,” “we,” “our,” or “us” in this Report, we mean Wells Fargo & Company and Subsidiaries (consolidated). When we refer to the “Parent,” we mean Wells Fargo & Company. See the Glossary of Acronyms for definitions of terms used throughout this Report.

Financial Review

Overview

Wells Fargo & Company is a leading financial services company that has approximately \$1.9 trillion in assets and proudly serves one in three U.S. households and more than 10% of all middle market companies and small businesses in the U.S. We provide a diversified set of banking, investment and mortgage products and services, as well as consumer and commercial finance, through our four reportable operating segments: Consumer Banking and Lending, Commercial Banking, Corporate and Investment Banking, and Wealth and Investment Management. Wells Fargo ranked No. 30 on *Fortune’s* 2020 rankings of America’s largest corporations. We ranked fourth in assets and third in the market value of our common stock among all U.S. banks at March 31, 2021.

Wells Fargo’s top priority remains meeting its regulatory requirements to build the right foundation for all that lies ahead. The Company is subject to a number of consent orders and other regulatory actions, which may require the Company, among other things, to undertake certain changes to its business, operations, products and services, and risk management practices. Addressing these regulatory actions is expected to take multiple years, and we may experience issues or delays along the way in satisfying their requirements. Issues or delays with one regulatory action could affect our progress on others, and failure to satisfy the requirements of a regulatory action on a timely basis could result in additional penalties, enforcement actions, and other negative consequences. While we still have significant work to do, the Company is committed to devoting the resources necessary to operate with strong business practices and controls, maintain the highest level of integrity, and have an appropriate culture in place.

Federal Reserve Board Consent Order Regarding Governance Oversight and Compliance and Operational Risk Management

On February 2, 2018, the Company entered into a consent order with the Board of Governors of the Federal Reserve System (FRB). As required by the consent order, the Company’s Board of Directors (Board) submitted to the FRB a plan to further enhance the Board’s governance and oversight of the Company, and the Company submitted to the FRB a plan to further improve the Company’s compliance and operational risk management program. The Company continues to engage with the FRB as the Company works to address the consent order provisions. The consent order also requires the Company, following the FRB’s acceptance and approval of the plans and the Company’s adoption and implementation of the plans, to complete an initial third-party review of the enhancements and improvements provided for in the plans. Until this third-party review is complete

and the plans are approved and implemented to the satisfaction of the FRB, the Company’s total consolidated assets as defined under the consent order will be limited to the level as of December 31, 2017. Compliance with this asset cap is measured on a two-quarter daily average basis to allow for management of temporary fluctuations. Due to the COVID-19 pandemic, on April 8, 2020, the FRB amended the consent order to allow the Company to exclude from the asset cap any on-balance sheet exposure resulting from loans made by the Company in connection with the Small Business Administration’s Paycheck Protection Program and the FRB’s Main Street Lending Program. As required under the amendment to the consent order, to the extent the Company chooses to exclude these exposures from the asset cap, certain fees and other economic benefits received by the Company from loans made in connection with these programs shall be transferred to the U.S. Treasury or to non-profit organizations approved by the FRB that support small businesses. As of March 31, 2021, the Company had not excluded these exposures from the asset cap. After removal of the asset cap, a second third-party review must also be conducted to assess the efficacy and sustainability of the enhancements and improvements.

Consent Orders with the Consumer Financial Protection Bureau and Office of the Comptroller of the Currency Regarding Compliance Risk Management Program, Automobile Collateral Protection Insurance Policies, and Mortgage Interest Rate Lock Extensions

On April 20, 2018, the Company entered into consent orders with the Consumer Financial Protection Bureau (CFPB) and the Office of the Comptroller of the Currency (OCC) to pay an aggregate of \$1 billion in civil money penalties to resolve matters regarding the Company’s compliance risk management program and past practices involving certain automobile collateral protection insurance (CPI) policies and certain mortgage interest rate lock extensions. As required by the consent orders, the Company submitted to the CFPB and OCC an enterprise-wide compliance risk management plan and a plan to enhance the Company’s internal audit program with respect to federal consumer financial law and the terms of the consent orders. In addition, as required by the consent orders, the Company submitted for non-objection plans to remediate customers affected by the automobile collateral protection insurance and mortgage interest rate lock matters, as well as a plan for the management of remediation activities conducted by the Company. The Company continues to work to address the provisions of the consent orders. The Company has not yet satisfied certain aspects of the consent orders, and as a result, we

Overview (continued)

believe regulators may impose additional penalties or take other enforcement actions.

Retail Sales Practices Matters

In September 2016, we announced settlements with the CFPB, the OCC, and the Office of the Los Angeles City Attorney, and entered into related consent orders with the CFPB and the OCC, in connection with allegations that some of our retail customers received products and services they did not request. As a result, it remains a top priority to rebuild trust through a comprehensive action plan that includes making things right for our customers, employees, and other stakeholders, and building a better Company for the future. Our priority of rebuilding trust has included numerous actions focused on identifying potential financial harm to customers resulting from these matters and providing remediation.

For additional information regarding retail sales practices matters, including related legal matters, see the “Risk Factors” section in our 2020 Form 10-K and Note 13 (Legal Actions) to Financial Statements in this Report.

Other Customer Remediation Activities

Our priority of rebuilding trust has also included an effort to identify other areas or instances where customers may have experienced financial harm, provide remediation as appropriate, and implement additional operational and control procedures. We are working with our regulatory agencies in this effort. We have previously disclosed key areas of focus as part of our rebuilding trust efforts and are in the process of providing remediation for those matters. We have accrued for the probable and estimable remediation costs related to our rebuilding trust efforts, which amounts may change based on additional facts and information, as well as ongoing reviews and communications with our regulators.

As our ongoing reviews continue, it is possible that in the future we may identify additional items or areas of potential concern. To the extent issues are identified, we will continue to assess any customer harm and provide remediation as appropriate. For additional information, including related legal and regulatory risk, see the “Risk Factors” section in our 2020 Form 10-K and Note 13 (Legal Actions) to Financial Statements in this Report.

Recent Developments

Efficiency Initiatives

We are pursuing various initiatives to reduce expenses and create a more efficient and streamlined organization. Actions from these initiatives may include (i) reorganizing and simplifying business processes and structures to improve internal operations and the customer experience, (ii) reducing headcount, (iii) optimizing third-party spending, including for our technology infrastructure, and (iv) rationalizing our branch and administrative locations, which may include consolidations and closures. In first quarter 2021, we recognized a limited amount of restructuring charges within noninterest expense in our consolidated statement of income as a result of these initiatives. For additional information, see Note 19 (Restructuring Charges) to Financial Statements in this Report.

COVID-19 Pandemic

In response to the COVID-19 pandemic, we have been working diligently to protect employee safety while continuing to carry out Wells Fargo’s role as a provider of essential services to the public. We have taken comprehensive steps to help customers, employees and communities.

We have strong levels of capital and liquidity, and we remain focused on delivering for our customers and communities to get through these unprecedented times.

PAYCHECK PROTECTION PROGRAM The Coronavirus Aid, Relief, and Economic Security Act (CARES Act) created funding for the Small Business Administration’s (SBA) loan program providing forgiveness of up to the full principal amount of qualifying loans guaranteed under a program called the Paycheck Protection Program (PPP). Since its inception, we have funded approximately 264,000 loans under the PPP totaling \$13.2 billion, and more than \$1.0 billion of principal forgiveness has been provided on qualifying PPP loans. We deferred approximately \$420 million of SBA processing fees in 2020 that will be recognized as interest income over the terms of the loans. We voluntarily committed to donate all of the gross processing fees received from PPP loans funded in 2020. Through March 31, 2021, we donated approximately \$125 million of these processing fees to non-profit organizations that support small businesses. We funded \$2.8 billion of PPP loans in first quarter 2021. For this latest round in first quarter 2021, we deferred approximately \$200 million of SBA processing fees that will be recognized as interest income over the terms of the loans. We have committed to donate any net profits related to PPP loans funded in 2021. For additional information on the CARES Act and the PPP, see the “Overview – Recent Developments – COVID-19 Pandemic” section in our 2020 Form 10-K.

LIBOR Transition

The London Interbank Offered Rate (LIBOR) is a widely-referenced benchmark rate, which is published in five currencies and a range of tenors, and seeks to estimate the cost at which banks can borrow on an unsecured basis from other banks. On March 5, 2021, the Financial Conduct Authority and the administrator of LIBOR announced that LIBOR will no longer be published on a representative basis after December 31, 2021, with the exception of the most commonly used tenors of U.S. dollar (USD) LIBOR which will no longer be published on a representative basis after June 30, 2023. Federal banking agencies have issued guidance strongly encouraging banking organizations to cease using USD LIBOR as a reference rate in new contracts as soon as practicable and in any event by December 31, 2021.

For information on the amount of our LIBOR-linked assets and liabilities, as well as initiatives created by our LIBOR Transition Office in an effort to mitigate the risks associated with a transition away from LIBOR, see the “Overview – Recent Developments – LIBOR Transition” section in our 2020 Form 10-K. For information regarding the risks and potential impact of LIBOR or any other referenced financial metric being significantly changed, replaced or discontinued, see the “Risk Factors” section in our 2020 Form 10-K.

Capital Actions and Restrictions

On March 25, 2021, the FRB announced that it was extending measures it previously announced limiting capital distributions by large bank holding companies (BHCs), including Wells Fargo, subject to certain exceptions. The FRB has generally authorized, among other things, BHCs to pay common stock dividends and make share repurchases that, in the aggregate, do not exceed an amount equal to the average of the BHC’s net income for the four preceding calendar quarters, so long as the BHC does not increase the amount of its common stock dividend from the level paid in second quarter 2020. The FRB also announced that if a BHC remains above all of its minimum risk-based capital

requirements in this year's supervisory stress test, these additional limitations on capital distributions will end for that BHC after June 30, 2021. For additional information about capital planning, including the FRB's recent announcement on capital distributions, see the "Capital Management – Capital Planning and Stress Testing" section in this Report.

Business and Portfolio Divestitures

On February 23, 2021, we announced an agreement to sell Wells Fargo Asset Management for a purchase price of \$2.1 billion. As part of the transaction, we will own a 9.9% equity interest and continue to serve as a client and distribution partner.

Financial Performance

Consolidated Financial Highlights

(\$ in millions)	Quarter ended Mar 31,		\$ Change	% Change
	2021	2020		
Selected income statement data				
Net interest income	\$ 8,798	11,312	(2,514)	(22)%
Noninterest income	9,265	6,405	2,860	45

Net charge-offs	523	941	(418)	(44)
Change in the allowance for credit losses	(1,571)	3,064	(4,635)	NM
Provision for credit losses	(1,048)	4,005	(5,053)	NM
Noninterest expense	13,989	13,048	941	7
Income tax expense	326	159	167	105
Wells Fargo net income	4,742	653	4,089	626
Wells Fargo net income applicable to common stock	4,363	42	4,321	NM

NM – Not meaningful

In first quarter 2021, we generated \$4.7 billion of net income and diluted earnings per common share (EPS) of \$1.05, compared with \$653 million of net income and EPS of \$0.01 in the same period a year ago. Financial performance for first quarter 2021, compared with the same period a year ago, included the following:

- total revenue increased due to higher net gains from equity securities and mortgage banking income, partially offset by lower net interest income;
- provision for credit losses decreased reflecting lower net charge-offs and improvements in the economic environment;
- noninterest expense increased due to higher personnel expense, partially offset by lower operating losses and lower professional and outside services expense;
- average loans decreased due to paydowns exceeding originations in the residential mortgage and credit card portfolios, weak demand for commercial loans, and the reclassification of student loans, included in other consumer loans, to loans held for sale after the announced sale of the portfolio in fourth quarter 2020; and
- average deposits increased driven by growth in consumer deposits in the Consumer Banking and Lending and Wealth and Investment Management (WIM) operating segments due to customers' preferences for liquidity given the economic uncertainty associated with the COVID-19 pandemic, government stimulus programs, and lower consumer spending, partially offset by actions taken to manage under the asset cap which reduced deposits in the Corporate and Investment Banking operating segment and Corporate.

On March 23, 2021, we announced an agreement to sell our Corporate Trust Services business for a purchase price of \$750 million. Both transactions are expected to close in the second half of 2021, subject to customary closing conditions.

In first quarter 2021, we completed the first phase of the previously announced sale of our student loan portfolio, which resulted in a \$208 million gain included in other noninterest income and a \$104 million goodwill write-down included in other noninterest expense. In April 2021, we completed the sale of substantially all of the remaining portfolio, which will result in a \$147 million gain and a \$79 million write-down of the remaining goodwill in second quarter 2021.

Capital and Liquidity

We maintained a strong capital position in first quarter 2021, with total equity of \$188.3 billion at March 31, 2021, compared with \$185.9 billion at December 31, 2020. Our liquidity and regulatory capital ratios remained strong at March 31, 2021, including:

- our liquidity coverage ratio (LCR) was 127%, which continued to exceed the regulatory minimum of 100%;
- our Common Equity Tier 1 (CET1) ratio was 11.85%, which continued to exceed both the regulatory requirement of 9% and our current internal target of 10%; and
- our eligible external total loss absorbing capacity (TLAC) as a percentage of total risk-weighted assets was 25.18%, compared with the regulatory requirement of 21.50%.

See the "Capital Management" and the "Risk Management – Asset/Liability Management – Liquidity Risk and Funding" sections in this Report for additional information regarding our capital and liquidity, including the calculation of our regulatory capital and liquidity amounts.

Credit Quality

Credit quality was impacted by the improving economic environment.

- The allowance for credit losses (ACL) for loans of \$18.0 billion at March 31, 2021, decreased \$1.7 billion from December 31, 2020.
- Our provision for credit losses for loans was \$(1.1) billion in first quarter 2021, down from \$3.8 billion in the same period a year ago. The decrease in the ACL for loans and the provision for credit losses in first quarter 2021, compared with the same period a year ago, reflected improvements in the economic environment.

Overview (continued)

- The allowance coverage for total loans was 2.09% at March 31, 2021, compared with 2.22% at December 31, 2020.
- Commercial portfolio net loan charge-offs were \$149 million, or 13 basis points of average commercial loans, in first quarter 2021, compared with net loan charge-offs of \$324 million, or 25 basis points, in the same period a year ago, predominantly driven by lower losses in our commercial and industrial portfolio primarily within the oil, gas and pipelines industry, partially offset by increased losses in the real estate mortgage and construction portfolios.
- Consumer portfolio net loan charge-offs were \$364 million, or 37 basis points of average consumer loans, in first quarter 2021, compared with net loan charge-offs of \$585 million, or 53 basis points, in the same period a year ago, driven by lower losses in all consumer loan portfolios as a result of payment deferral activities and government stimulus programs instituted in response to the COVID-19 pandemic.
- Nonperforming assets (NPAs) of \$8.2 billion at March 31, 2021, decreased \$692 million, or 8%, from December 31, 2020, predominantly driven by decreases in our commercial and industrial portfolio, primarily within the oil, gas and pipelines industry, commercial real estate mortgage, and residential mortgage portfolios reflecting improvements in the economic environment. NPAs represented 0.95% of total loans at March 31, 2021.

Earnings Performance

Wells Fargo net income for first quarter 2021 was \$4.7 billion (\$1.05 diluted EPS), compared with \$653 million (\$0.01 diluted EPS) for first quarter 2020. Net income increased in first quarter 2021, compared with the same period a year ago, predominantly due to a \$5.1 billion decrease in provision for credit losses and a \$2.9 billion increase in noninterest income, partially offset by a \$2.5 billion decrease in net interest income and a \$941 million increase in noninterest expense.

Net Interest Income

Net interest income and net interest margin decreased in first quarter 2021, compared with the same period a year ago, driven by a repricing of the balance sheet, lower loan balances primarily due to soft demand and elevated prepayments, as well as unfavorable hedge ineffectiveness accounting results, and higher mortgage-backed securities premium amortization.

Table 1 presents the individual components of net interest income and the net interest margin. Net interest income and the net interest margin are presented on a taxable-equivalent basis in Table 1 to consistently reflect income from taxable and tax-exempt loans and debt and equity securities based on a 21% federal statutory tax rate for the periods ended March 31, 2021 and 2020.

For additional information about net interest income and net interest margin, see the “Earnings Performance – Net Interest Income” section in our 2020 Form 10-K.

(1) In first quarter 2021, trust and investment management fees and asset-based brokerage fees were combined into a single line item for investment advisory and other asset-based fees, and brokerage commissions and other brokerage services fees were combined into a single line item for commissions and brokerage services fees. Prior period balances have been revised to conform with the current period presentation.

First quarter 2021 vs. first quarter 2020

Deposit-related fees decreased driven by:

- higher average consumer deposit account balances due to the economic slowdown and government stimulus programs associated with the COVID-19 pandemic; and
- higher fee waivers and reversals as part of our actions to support customers during the COVID-19 pandemic;

partially offset by:

- higher treasury management fees on commercial accounts driven by a lower earnings credit rate due to the lower interest rate environment.

Investment advisory and other asset-based fees increased reflecting higher market valuations on client investment assets.

For additional information on certain client investment assets, see the “Earnings Performance – Operating Segment Results – Wealth and Investment Management – WIM Advisory Assets” and “Earnings Performance – Operating Segment Results – Corporate – Wells Fargo Asset Management (WFAM) Assets Under Management” sections in this Report.

Commissions and brokerage services fees decreased driven by lower transactional revenue due to higher customer activity in first quarter 2020 reflecting the economic uncertainty associated with the onset of the COVID-19 pandemic.

Investment banking fees increased driven by higher advisory fees and equity and debt origination fees.

Card fees increased reflecting lower credit card rewards costs, partially offset by lower late fees due to higher payment rates.

Servicing income, net decreased reflecting:

- lower servicing fees due to a lower balance of loans serviced for others resulting from continued prepayments; and
- lower income from mortgage servicing right (MSR) valuation changes and related hedges, which reflected a favorable

impact from changes in interest rates, more than offset by less favorable hedge results.

Net gains on mortgage loan originations/sales increased driven by:

- higher margins in our retail production channel;
- higher residential real estate held for sale (HFS) origination volumes in our retail production channel;
- higher gains related to the re-securitization of loans we purchased from Government National Mortgage Association (GNMA) loan securitization pools in 2020; and
- higher gains due to losses in first quarter 2020 driven by the impact of interest rate volatility on hedging activities associated with our residential mortgage loans held for sale portfolio and pipeline, as well as valuation losses on certain residential and commercial loans held for sale due to market conditions.

For additional information on servicing income and net gains on mortgage loan originations/sales, see Note 9 (Mortgage Banking Activities) to Financial Statements in this Report.

Net gains from trading activities increased reflecting:

- higher client demand for asset-backed finance products, other credit products, and municipal bonds;

partially offset by:

- lower client demand for interest rate products and lower revenue in equities and commodities.

Net gains on debt securities decreased due to lower gains from the sales of agency mortgage-backed securities (MBS) and municipal bonds as a result of decreased sales volumes.

Net gains (losses) from equity securities increased driven by:

- lower impairment of \$920 million on equity securities due to the market impact of the COVID-19 pandemic in first quarter 2020;
- losses in first quarter 2020 on deferred compensation plan investments (largely offset in personnel expense). Refer to

- Table 3a for the results for our deferred compensation plan and related hedges; and
- higher realized gains on marketable equity securities.

Lease income decreased due to a reduction in the size of the operating lease asset portfolio.

Other income decreased due to:

- lower gains on the sales of residential mortgage loans which were reclassified to held for sale in 2019; and
- higher valuation losses related to the retained litigation risk, including the timing and amount of final settlement,

Noninterest Expense

Table 3: Noninterest Expense

(in millions)	Quarter ended March 31,		\$ Change	% Change
	2021	2020

Total	\$ 13,989	13,048	941	7

NM – Not meaningful

(1) Represents expenses for assets we lease to customers.

First quarter 2021 vs. first quarter 2020

Personnel expense increased driven by:

- higher deferred compensation expense;
- higher incentive compensation expense, including the impact of higher market valuations on stock-based compensation; and
- higher revenue-related compensation expense;

partially offset by:

- lower salaries.

associated with shares of Visa Class B common stock that we sold. For additional information, see the “Risk Management – Asset/Liability Management – Market Risk – Equity Securities” section in our 2020 Form 10-K;

partially offset by:

- a gain on the sale of a portion of our student loan portfolio; and
- higher income from investments accounted for under the equity method.

Table 3a presents results for our deferred compensation plan and related hedges. In second quarter 2020, we entered into arrangements to transition our economic hedges of the deferred compensation plan liabilities from equity securities to derivative instruments. As a result of this transition, changes in fair value of derivatives used to economically hedge the deferred compensation plan are reported in personnel expense rather than in net gains (losses) from equity securities within noninterest income. For additional information on the derivatives used in the economic hedges, see Note 14 (Derivatives) to Financial Statements in this Report.

Table 3a: Deferred Compensation and Related Hedges

(in millions)	Quarter ended March 31,	
	2021	2020
Net interest income	\$ —	12
Net losses from equity securities	—	(621)
Total losses from deferred compensation plan investments	—	(609)
Decrease (increase) in deferred compensation plan liabilities	(165)	598
Net derivative gains from economic hedges of deferred compensation	160	—
Decrease (increase) in personnel expense	(5)	598
Loss before income tax expense	\$ (5)	(11)

Technology, telecommunications and equipment expense increased due to higher expense for technology contracts and higher telecommunications expense related to the COVID-19 pandemic.

Occupancy expense increased due to additional cleaning fees, supplies, and equipment expenses related to the COVID-19 pandemic.

Operating losses decreased driven by lower expense for litigation accruals and customer remediation accruals.

Professional and outside services expense decreased driven by reduced project spending due to efficiency initiatives.

Lease expense decreased due to a reduction in the size of the operating lease asset portfolio.

Earnings Performance (continued)

Advertising and promotion expense decreased driven by reduced marketing and brand campaign volumes due to the impact of the COVID-19 pandemic.

Restructuring charges increased related to our efficiency initiatives that began in third quarter 2020. For additional information on restructuring charges, see Note 19 (Restructuring Charges) to Financial Statements in this Report.

Other expenses increased driven by:

- a write-down of goodwill in first quarter 2021 related to the sale of a portion of our student loan portfolio;
- higher charitable donations expense driven by the donation of PPP processing fees; and
- higher Federal Deposit Insurance Corporation (FDIC) deposit assessment expense driven by a higher assessment rate;

partially offset by:

- a reduction in business travel and company events due to the impact of the COVID-19 pandemic.

Income Tax Expense

Income tax expense was \$326 million in first quarter 2021, compared with \$159 million in the same period a year ago, driven by higher pre-tax income. The effective income tax rate was 6.4% for first quarter 2021, compared with 19.5% for the same period a year ago. Income tax expense for first quarter 2021 included net discrete income tax benefits of \$154 million related mainly to the resolution of prior period matters with tax authorities. Income tax expense for first quarter 2020 included net discrete income tax expense of \$141 million driven by the accounting for stock compensation activity, the net impact of accounting for uncertain tax positions, and the outcome of U.S. federal income tax examinations.

Operating Segment Results

Our management reporting is organized into four reportable operating segments: Consumer Banking and Lending; Commercial Banking; Corporate and Investment Banking; and Wealth and Investment Management. All other business activities that are not included in the reportable operating segments have been included in Corporate. For additional information, see Table 4. We define our reportable operating segments by type of product and customer segment, and their results are based on our management reporting process. The management reporting process measures the performance of the reportable operating segments based on the Company's management structure, and the results are regularly reviewed by our Chief Executive Officer and Operating Committee. The management reporting process is based on U.S. GAAP and includes specific adjustments, such as funds transfer pricing for asset/liability management, shared revenues and expenses, and taxable-equivalent adjustments to consistently reflect income from taxable and tax-exempt sources, which allows management to assess performance consistently across the operating segments.

In February 2021, we announced an agreement to sell Wells Fargo Asset Management and moved the business from the Wealth and Investment Management operating segment to Corporate. Prior period balances have been revised to conform with the current period presentation. This change did not impact the previously reported consolidated financial results of the Company.

Funds Transfer Pricing Corporate treasury manages a funds transfer pricing methodology that considers interest rate risk, liquidity risk, and other product characteristics. Operating segments pay a funding charge for their assets and receive a funding credit for their deposits, both of which are included in net interest income. The net impact of the funding charges or credits is recognized in corporate treasury.

Revenue and Expense Sharing When lines of business jointly serve customers, the line of business that is responsible for providing the product or service recognizes revenue or expense with a referral fee paid or an allocation of cost to the other line of business based on established internal revenue-sharing agreements.

When a line of business uses a service provided by another line of business or enterprise function (included in Corporate), expense is generally allocated based on the cost and use of the service provided.

Taxable-Equivalent Adjustments Taxable-equivalent adjustments related to tax-exempt income on certain loans and debt securities are included in net interest income, while taxable-equivalent adjustments related to income tax credits for low-income housing and renewable energy investments are included in noninterest income, in each case with corresponding impacts to income tax expense (benefit). Adjustments are included in Corporate, Commercial Banking, and Corporate and Investment Banking and are eliminated to reconcile to the Company's consolidated financial results.

Allocated Capital Reportable operating segments are allocated capital under a risk-sensitive framework that is primarily based on aspects of our regulatory capital requirements, and the assumptions and methodologies used to allocate capital are periodically assessed and revised. Management believes that return on allocated capital is a useful financial measure because it enables management, investors, and others to assess a reportable operating segment's use of capital.

Selected Metrics We present certain financial and nonfinancial metrics that management uses when evaluating reportable operating segment results. Management believes that these metrics are useful to investors and others to assess the performance, customer growth, and trends of reportable operating segments or lines of business.

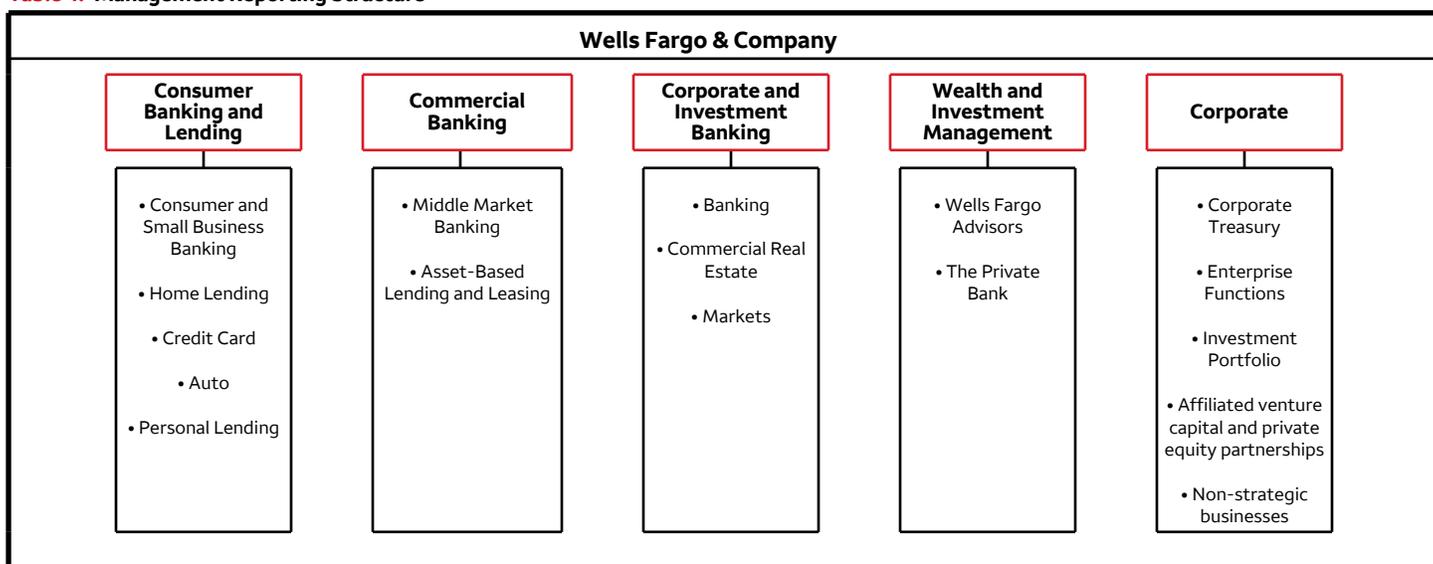

Table 4: Management Reporting Structure

Table 5 and the following discussion present our results by reportable operating segment. For additional information, see Note 22 (Operating Segments) to Financial Statements in this Report.

- (1) All other business activities that are not included in the reportable operating segments have been included in Corporate. For additional information, see the "Corporate" section below. In February 2021, we announced an agreement to sell Wells Fargo Asset Management and moved the business from the Wealth and Investment Management operating segment to Corporate. Prior period balances have been revised to conform with the current period presentation.
- (2) Taxable-equivalent adjustments related to tax-exempt income on certain loans and debt securities are included in net interest income, while taxable-equivalent adjustments related to income tax credits for low-income housing and renewable energy investments are included in noninterest income, in each case with corresponding impacts to income tax expense (benefit). Adjustments are included in Corporate, Commercial Banking, and Corporate and Investment Banking and are eliminated to reconcile to the Company's consolidated financial results.

Earnings Performance (continued)

Consumer Banking and Lending offers diversified financial products and services for consumers and small businesses with annual sales generally up to \$5 million. These financial products and services include checking and savings accounts, credit and

debit cards, as well as home, auto, personal, and small business lending. Table 5a and Table 5b provide additional information for Consumer Banking and Lending.

NM – Not meaningful

- (1) Return on allocated capital is segment net income (loss) applicable to common stock divided by segment average allocated capital. Segment net income (loss) applicable to common stock is segment net income (loss) less allocated preferred stock dividends.
- (2) Efficiency ratio is segment noninterest expense divided by segment total revenue (net interest income and noninterest income).
- (3) Digital and mobile active customers is the number of consumer and small business customers who have logged on via a digital or mobile device, respectively, in the prior 90 days. Digital active customers includes both online and mobile customers.
- (4) Deposit spread is (i) the internal funds transfer pricing credit on segment deposits minus interest paid to customers for segment deposits, divided by (ii) average segment deposits.
- (5) Debit card purchase volume and transactions reflect combined activity for both consumer and business debit card purchases.
- (6) Excludes residential mortgage loans subserviced for others.
- (7) Excludes residential mortgage loans insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA) and loans held for sale.
- (8) Beginning in second quarter 2020, customer payment deferral activities instituted in response to the COVID-19 pandemic may have delayed the recognition of delinquencies for those customers who would have otherwise moved into past due status.
- (9) Excludes certain private label new account openings.

First quarter 2021 vs. first quarter 2020

Revenue was largely unchanged reflecting:

- higher card fees driven by lower credit card rewards costs, partially offset by lower late fees due to higher payment rates; and
- higher mortgage banking noninterest income driven by higher HFS origination volumes and higher margins in our retail production channel, partially offset by lower servicing income due to lower servicing fees on lower balances of loans serviced for others and lower income from MSR valuation changes and related hedges;

partially offset by:

- lower net interest income reflecting the lower interest rate environment and lower loan balances as paydowns exceeded originations;
- lower deposit-related fees driven by higher average consumer deposit account balances due to the economic slowdown associated with the COVID-19 pandemic, as well as fee waivers and reversals as part of our actions to support customers during the COVID-19 pandemic; and
- lower other income driven by lower gains on loan sales.

Provision for credit losses decreased driven by an improving economic environment.

Noninterest expense was largely unchanged reflecting:

- higher charitable donations expense due to the donation of PPP processing fees;
- higher FDIC deposit assessment expense driven by a higher assessment rate;
- higher expense allocated from enterprise functions, reflecting risk management and technology support; and
- higher personnel expense driven by higher revenue-related compensation in Home Lending, partially offset by lower branch staffing expense related to efficiency initiatives in Consumer and Small Business Banking;

offset by:

- lower operating losses due to lower expense for litigation and customer remediation accruals; and
- lower advertising and promotion expense.

Earnings Performance (continued)

Personal Lending	4,998	6,692	(1,694)	(25)
Total loans	\$ 340,549	380,201	(39,652)	(10)
Total deposits	837,765	672,603	165,162	25

First quarter 2021 vs. first quarter 2020

Total loans (average and period-end) decreased as growth in small business loans driven by loans funded under the PPP was more than offset by paydowns exceeding originations in the home lending, credit card, and personal lending portfolios. Home lending loan balances were also impacted by actions taken in 2020 to suspend certain non-conforming residential mortgage and home equity originations.

Total deposits (average and period-end) increased driven by government stimulus programs and lower consumer spending due to the COVID-19 pandemic.

Commercial Banking provides financial solutions to private, family owned and certain public companies. Products and services include banking and credit products across multiple industry sectors and municipalities, secured lending and lease products, and treasury management. In March 2021, we

announced an agreement to sell our Corporate Trust Services business and expect to move the business from the Commercial Banking operating segment to Corporate in second quarter 2021. Table 5c and Table 5d provide additional information for Commercial Banking.

NM – Not meaningful

First quarter 2021 vs. first quarter 2020

Revenue decreased driven by:

- lower net interest income reflecting the lower interest rate environment and lower average loan balances; and
- lower lease income reflecting a reduction in the size of the operating lease asset portfolio;

partially offset by:

- higher other noninterest income due to impairments on equity securities in first quarter 2020; and
- higher treasury management fees on commercial accounts, included in deposit-related fees, driven by a lower earnings credit rate due to the lower interest rate environment.

Provision for credit losses decreased driven by an improving economic environment.

Noninterest expense increased driven by:

- higher expenses allocated from enterprise functions, including higher technology expenses;

partially offset by:

- lower spending related to efficiency initiatives, including lower personnel expense from reduced headcount;
- lower professional and outside services expense reflecting decreased project-related expense; and
- lower lease expense reflecting a reduction in the size of the operating lease asset portfolio.

First quarter 2021 vs. first quarter 2020

Total loans (average and period-end) decreased driven by lower loan demand, including lower line utilization, and higher paydowns reflecting continued client liquidity and strength in the capital markets.

Total deposits (average) increased due to government stimulus programs, customers' preferences for liquidity given the economic uncertainty associated with the COVID-19 pandemic, and lower investment spending.

Corporate and Investment Banking delivers a suite of capital markets, banking, and financial products and services to corporate, commercial real estate, government and institutional clients globally. Products and services include corporate banking, investment banking, treasury management, commercial real

estate lending and servicing, equity and fixed income solutions, as well as sales, trading, and research capabilities. Table 5e and Table 5f provide additional information for Corporate and Investment Banking.

NM – Not meaningful

First quarter 2021 vs. first quarter 2020

Revenue increased driven by:

- higher net gains from trading activities driven by higher client demand for asset-backed finance products, other credit products, and municipal bonds, partially offset by lower client demand for interest rate products and lower revenue in equities and commodities; and
- higher investment banking fees driven by higher advisory fees and equity and debt origination fees;

partially offset by:

- lower net interest income reflecting the lower interest rate environment, lower deposit balances, and lower trading-related assets.

Provision for credit losses decreased driven by an improving economic environment.

Earnings Performance (continued)

Noninterest expense decreased driven by:

- lower operating losses due to lower expense for litigation accruals and customer remediation accruals;
- lower expenses allocated from enterprise functions reflecting lower spending due to efficiency initiatives; and
- a reduction in business travel and company events due to the impact of the COVID-19 pandemic;

partially offset by:

- higher personnel expense on revenue-related incentive compensation.

Total deposits	188,920	260,281	(71,361)	(27)

First quarter 2021 vs. first quarter 2020

Total assets (average and period-end) decreased predominantly due to a decline in trading-related assets reflecting continued actions to manage under the asset cap and a decline in loan balances driven by lower demand due to the COVID-19 pandemic and higher paydowns reflecting continued client liquidity and strength in the capital markets.

Total deposits (average and period-end) decreased reflecting continued actions to manage under the asset cap.

Wealth and Investment Management provides personalized wealth management, investment and retirement products and services to clients across U.S.-based businesses including Wells Fargo Advisors and The Private Bank. We serve clients' brokerage needs, and deliver financial planning, private banking, credit, and fiduciary services to high-net worth and ultra-high-net worth individuals and families. In February 2021, we

announced an agreement to sell Wells Fargo Asset Management and moved the business from the Wealth and Investment Management operating segment to Corporate. Prior period balances have been revised to conform with the current period presentation. Table 5g and Table 5h provide additional information for Wealth and Investment Management.

NM – Not meaningful

(1) In first quarter 2021, trust and investment management fees and asset-based brokerage fees were combined into a single line item for investment advisory and other asset-based fees, and brokerage commissions and other brokerage services fees were combined into a single line item for commissions and brokerage services fees. Prior period balances have been revised to conform with the current period presentation.

(2) Represents annualized total revenue divided by average total financial and wealth advisors for the period.

First quarter 2021 vs. first quarter 2020

Revenue increased driven by:

- higher investment advisory and other asset-based fees driven by higher market valuations on WIM advisory assets; and
- higher deferred compensation plan investment results included in other noninterest income (largely offset by personnel expense);

partially offset by:

- lower net interest income reflecting the lower interest rate environment, partially offset by higher average deposit balances.

Provision for credit losses decreased driven by an improving economic environment.

Noninterest expense increased due to higher personnel expense driven by higher revenue-related compensation and higher deferred compensation expense (largely offset by net gains from equity securities).

Total deposits (average and period-end) increased primarily due to growth in brokerage clients' cash balances.

Earnings Performance (continued)

WIM Advisory Assets In addition to transactional accounts, WIM offers advisory account relationships to brokerage customers. Fees from advisory accounts are based on a percentage of the market value of the assets as of the beginning of the quarter, which vary across the account types based on the distinct services provided, and are affected by investment performance as well as asset inflows and outflows. Advisory accounts include assets that are financial advisor-directed and separately managed by third-party managers, as well as certain client-directed brokerage assets where we earn a fee for advisory and other services, but do not have investment discretion.

WIM also manages personal trust and other assets for high net worth clients, with fee income earned based on a percentage of the market value of these assets. Table 5h presents advisory assets activity by WIM line of business for first quarter 2021 and 2020. Management believes that advisory assets is a useful metric because it allows management, investors, and others to assess how changes in asset amounts may impact the generation of certain asset-based fees.

For first quarter 2021 and 2020, the average fee rate by account type ranged from 50 to 120 basis points.

Table 5h: WIM Advisory Assets

(in billions)					Quarter ended
	Balance, beginning of period	Inflows (1)	Outflows (2)	Market impact (3)	Balance, end of period
March 31, 2021					
Client-directed (4)	\$ 186.3	10.6	(9.8)	5.6	192.7
Financial advisor-directed (5)	211.0	12.3	(9.0)	9.1	223.4
Separate accounts (6)	174.6	8.5	(7.0)	7.0	183.1
Mutual fund advisory (7)	91.4	4.0	(3.5)	2.8	94.7
Total Retail Brokerage	\$ 663.3	35.4	(29.3)	24.5	693.9
Total Private Wealth (8)	189.4	8.9	(12.5)	5.7	191.5
Total WIM advisory assets	\$ 852.7	44.3	(41.8)	30.2	885.4
March 31, 2020					
Client directed (4)	\$ 169.4	10.1	(9.6)	(27.2)	142.7
Financial advisor directed (5)	176.3	10.7	(8.6)	(26.0)	152.4
Separate accounts (6)	160.1	6.8	(8.5)	(24.2)	134.2
Mutual fund advisory (7)	83.7	3.2	(4.5)	(12.9)	69.5
Total Retail Brokerage	\$ 589.5	30.8	(31.2)	(90.3)	498.8
Total Private Wealth (8)	188.0	8.5	(11.0)	(23.7)	161.8
Total WIM advisory assets	\$ 777.5	39.3	(42.2)	(114.0)	660.6

(1) Inflows include new advisory account assets, contributions, dividends and interest.

(2) Outflows include closed advisory account assets, withdrawals and client management fees.

(3) Market impact reflects gains and losses on portfolio investments.

(4) Investment advice and other services are provided to client, but decisions are made by the client and the fees earned are based on a percentage of the advisory account assets, not the number and size of transactions executed by the client.

(5) Professionally managed portfolios with fees earned based on respective strategies and as a percentage of certain client assets.

(6) Professional advisory portfolios managed by Wells Fargo Asset Management or third-party asset managers. Fees are earned based on a percentage of certain client assets.

(7) Program with portfolios constructed of load-waived, no-load and institutional share class mutual funds. Fees are earned based on a percentage of certain client assets.

(8) Discretionary and non-discretionary portfolios held in personal trusts, investment agency, or custody accounts with fees earned based on a percentage of client assets.

Corporate includes corporate treasury and enterprise functions, net of allocations (including funds transfer pricing, capital, liquidity and certain expenses), in support of the reportable operating segments, as well as our investment portfolio and affiliated venture capital and private equity partnerships. In addition, Corporate includes all restructuring charges related to our efficiency initiatives. See Note 19 (Restructuring Charges) to Financial Statements in this Report for additional information on restructuring charges. Corporate also includes certain lines of business that management has determined are no longer

consistent with the long-term strategic goals of the Company, including our student loan and rail car leasing businesses, as well as results for previously divested businesses. In February 2021, we announced an agreement to sell Wells Fargo Asset Management and moved the business from the Wealth and Investment Management operating segment to Corporate. Prior period balances have been revised to conform with the current period presentation. Table 5i, Table 5j, and Table 5k provide additional information for Corporate.

Table 5i: Corporate – Income Statement and Selected Metrics

Wells Fargo Asset Management assets under management (\$ in billions)	\$ 590	518	72	14

NM – Not meaningful

(1) Reflects results attributable to noncontrolling interests predominantly associated with the Company's consolidated venture capital investments.

(2) Beginning in first quarter 2021, employees who were notified of displacement remained as headcount in their respective operating segment rather than included in Corporate.

First quarter 2021 vs. first quarter 2020

Revenue increased driven by:

- higher gains on equity securities due to impairments in first quarter 2020 related to our affiliated venture capital and private equity partnerships;
- higher deferred compensation plan investment results (largely offset by personnel expense); and
- a gain on the sale of a portion of our student loan portfolio in first quarter 2021;

partially offset by:

- lower net interest income reflecting the lower interest rate environment and unfavorable hedge ineffectiveness accounting results; and
- lower gains on debt securities due to decreased sales volumes.

Provision for credit losses decreased driven by an improving economic environment.

Noninterest expense increased due to:

- higher stock-based compensation on higher market valuations;
- higher deferred compensation plan expense; and
- a write-down of goodwill in first quarter 2021 related to the sale of a portion of our student loan portfolio;

partially offset by:

- lower professional and outside services expense driven by reduced project spending due to efficiency initiatives.

As of March 31, 2021, our rail car leasing business had long-lived operating lease assets (as a lessor) of \$5.6 billion, which was net of \$1.8 billion of accumulated depreciation. The average age of our rail cars is 21 years and the rail cars are typically leased under short-term leases of 3 to 5 years. Our three largest concentrations, which represented 55% of our rail car fleet as of March 31, 2021, were rail cars used for the transportation of agricultural grain, coal, and cement/sand products. Impairments may result in the future based on changing economic and market conditions affecting the long-term demand and utility of specific types of rail cars. Our assumptions for impairment are sensitive to estimated utilization and rental rates, as well as the estimated economic life of the leased asset. For more information on the accounting for impairment of operating lease assets, see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

Corporate includes assets under management (AUM) and assets under administration (AUA) for Institutional Retirement and Trust (IRT) client assets of \$22 billion and \$668 billion, respectively, at March 31, 2021, which we continue to administer at the direction of the buyer pursuant to a transition services agreement. The transition services agreement has been extended and will now terminate no later than December 2021.

Earnings Performance (continued)

Table 5j: Corporate – Balance Sheet

(in millions)			Quarter ended March 31,	
	2021	2020	\$ Change	% Change
Selected Balance Sheet Data (average)				
Cash, cash equivalents, and restricted cash	\$ 222,797	122,459	100,338	82 %
Available-for-sale debt securities	200,421	244,834	(44,413)	(18)
Held-to-maturity debt securities	217,346	157,788	59,558	38
Equity securities	10,904	13,970	(3,066)	(22)
Total loans	10,228	21,502	(11,274)	(52)
Total assets	727,440	629,210	98,230	16
Total deposits	27,861	80,248	(52,387)	(65)
Selected Balance Sheet Data (period-end)				
Cash, cash equivalents, and restricted cash	\$ 257,887	123,943	133,944	108
Available-for-sale debt securities	188,724	239,051	(50,327)	(21)
Held-to-maturity debt securities	231,352	169,070	62,282	37
Equity securities	11,093	14,358	(3,265)	(23)
Total loans	10,516	22,085	(11,569)	(52)
Total assets	753,730	622,795	130,935	21
Total deposits	24,347	71,783	(47,436)	(66)

First quarter 2021 vs. first quarter 2020

Total assets (average and period-end) increased due to:

- an increase in cash, cash equivalents, and restricted cash managed by corporate treasury as a result of an increase in deposits from the reportable operating segments; and
- an increase in held-to-maturity debt securities related to portfolio rebalancing to manage liquidity and interest rate risk;

partially offset by:

- a decline in available-for-sale debt securities related to portfolio rebalancing to manage liquidity and interest rate risk;
- a decline in equity securities due to the transition from equity securities to derivative instruments for economic hedges of the deferred compensation plan liabilities in second quarter 2020 and a reduction in Federal Home Loan Bank stock; and
- a decline in loans due to the sale of a portion of our student loan portfolio in first quarter 2021.

Total deposits (average and period-end) decreased reflecting actions taken to manage under the asset cap.

Wells Fargo Asset Management (WFAM) Assets Under Management We earn investment advisory and other asset-based fees from managing and administering assets through WFAM, which offers Wells Fargo proprietary mutual funds and manages institutional separate accounts. Generally, we earn fees from AUM where we have discretionary management authority over the investments and generate fees as a percentage of the market value of the AUM. WFAM assets under management consist of equity, alternative, balanced, fixed income, money market, and stable value, and include client assets that are managed or sub-advised on behalf of other Wells Fargo lines of business. Table 5k presents WFAM AUM activity for first quarter 2021 and 2020. Management believes that AUM is a useful metric because it allows management, investors, and others to assess how changes in asset amounts may impact the generation of certain asset-based fees.

Table 5k: WFAM Assets Under Management

(in billions)					Quarter ended
	Balance, beginning of period	Inflows (1)	Outflows (2)	Market impact (3)	Balance, end of period
March 31, 2021					
Money market funds (4)	\$ 197.4	—	(6.2)	—	191.2
Other assets managed	405.6	23.8	(30.3)	0.1	399.2
Total WFAM assets under management	\$ 603.0	23.8	(36.5)	0.1	590.4
March 31, 2020					
Money market funds (4)	\$ 130.6	35.6	—	—	166.2
Other assets managed	378.2	26.2	(28.6)	(24.2)	351.6
Total WFAM assets under management	\$ 508.8	61.8	(28.6)	(24.2)	517.8

(1) Inflows include new managed account assets, contributions, dividends and interest.

(2) Outflows include closed managed account assets, withdrawals and client management fees.

(3) Market impact reflects gains and losses on portfolio investments.

(4) Money Market funds activity is presented on a net inflow or net outflow basis, because the gross flows are not meaningful nor used by management as an indicator of performance.

Balance Sheet Analysis

At March 31, 2021, our assets totaled \$1.96 trillion, up \$4.4 billion from December 31, 2020.

The following discussion provides additional information about the major components of our consolidated balance sheet.

See the “Capital Management” section in this Report for information on changes in our equity.

Available-for-Sale and Held-to-Maturity Debt Securities

Table 6: Available-for-Sale and Held-to-Maturity Debt Securities

(\$ in millions)	March 31, 2021				December 31, 2020			
	Amortized cost, net (1)	Net unrealized gains	Fair value	Weighted average expected maturity (yrs)	Amortized cost, net (1)	Net unrealized gains	Fair value	Weighted average expected maturity (yrs)
Available-for-sale (2)	197,805	3,045	200,850	5.1	215,533	4,859	220,392	4.5
Held-to-maturity (3)	232,192	1,767	233,959	6.0	205,720	6,587	212,307	4.5
Total	\$ 429,997	4,812	434,809	n/a	421,253	11,446	432,699	n/a

(1) Represents amortized cost of the securities, net of the allowance for credit losses of \$41 million and \$28 million related to available-for-sale debt securities and \$89 million and \$41 million related to held-to-maturity debt securities at March 31, 2021, and December 31, 2020.

(2) Available-for-sale debt securities are carried on the consolidated balance sheet at fair value.

(3) Held-to-maturity debt securities are carried on the consolidated balance sheet at amortized cost, net of the allowance for credit losses.

Table 6 presents a summary of our portfolio of investments in available-for-sale (AFS) and held-to-maturity (HTM) debt securities. See the “Balance Sheet Analysis – Available-for-Sale and Held-to-Maturity Debt Securities” section in our 2020 Form 10-K for information on our investment management objectives and practices and the “Risk Management – Asset/Liability Management” section in this Report for information on liquidity and interest rate risk.

The fair value of AFS debt securities decreased from December 31, 2020, as purchases were more than offset by runoff, sales and transfers to HTM debt securities due to actions taken to reposition the overall portfolio for capital management purposes.

The net amortized cost of HTM debt securities increased from December 31, 2020, as purchases and transfers from AFS debt securities were partially offset by runoff.

At March 31, 2021, 93% of the combined AFS and HTM debt securities portfolio was rated AA- or above. Ratings are based on external ratings where available and, where not available, based on internal credit grades.

The total net unrealized gains on AFS and HTM debt securities decreased from December 31, 2020, driven by higher interest rates, partially offset by tighter credit spreads. See Note 3 (Available-for-Sale and Held-to-Maturity Debt Securities) to Financial Statements in this Report for additional information on AFS and HTM debt securities, including a summary of debt securities by security type.

Loan Portfolios

Table 7 provides a summary of total outstanding loans by portfolio segment. Commercial loans were relatively flat compared with December 31, 2020. Consumer loans decreased from December 31, 2020, due to:

- paydowns exceeding originations in residential mortgage loans; and
- seasonally lower credit card balances.

Table 7: Loan Portfolios

(in millions)	March 31, 2021	December 31, 2020
Commercial	\$ 477,520	478,417
Consumer	384,052	409,220
Total loans	\$ 861,572	887,637
Change from prior year-end	\$ (26,065)	(74,628)

Average loan balances and a comparative detail of average loan balances is included in Table 1 under “Earnings Performance – Net Interest Income” earlier in this Report. Additional information on total loans outstanding by portfolio segment and class of financing receivable is included in the “Risk Management – Credit Risk Management” section in this Report. Period-end balances and other loan related information are in Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report.

See the “Balance Sheet Analysis – Loan Portfolios” section in our 2020 Form 10-K for additional information regarding contractual loan maturities and the distribution of loans to changes in interest rates.

Balance Sheet Analysis (continued)

Deposits

Deposits increased from December 31, 2020, reflecting:

- consumer customers' preferences for liquidity given the economic uncertainty associated with the COVID-19 pandemic, government stimulus programs, and lower customer spending, as well as seasonality for items such as income tax refunds;

partially offset by:

- actions taken to manage under the asset cap resulting in declines in time deposits, such as brokered certificates of

deposit (CDs), and interest-bearing deposits in non-U.S. offices.

Table 8 provides additional information regarding deposits. Information regarding the impact of deposits on net interest income and a comparison of average deposit balances is provided in the "Earnings Performance – Net Interest Income" section and Table 1 earlier in this Report.

Table 8: Deposits

(\$ in millions)	Mar 31, 2021	% of total deposits	Dec 31, 2020	% of total deposits	% Change
Noninterest-bearing demand deposits	\$ 494,087	34 %	\$ 467,068	33 %	6
Interest-bearing demand deposits	452,484	32	447,446	32	1
Savings deposits	423,388	29	404,935	29	5
Time deposits	39,446	3	49,775	4	(21)
Interest-bearing deposits in non-U.S. offices	27,714	2	35,157	2	(21)
Total deposits	\$ 1,437,119	100 %	\$ 1,404,381	100 %	2

Off-Balance Sheet Arrangements

In the ordinary course of business, we engage in financial transactions that are not recorded on the consolidated balance sheet, or may be recorded on the consolidated balance sheet in amounts that are different from the full contract or notional amount of the transaction. Our off-balance sheet arrangements include commitments to lend and purchase debt and equity securities, transactions with unconsolidated entities, guarantees, derivatives, and other commitments. These transactions are designed to (1) meet the financial needs of customers, (2) manage our credit, market or liquidity risks, and/or (3) diversify our funding sources.

Commitments to Lend

We enter into commitments to lend to customers, which are usually at a stated interest rate, if funded, and for specific purposes and time periods. When we enter into commitments, we are exposed to credit risk. The maximum credit risk for these commitments will generally be lower than the contractual amount because a significant portion of these commitments are not funded. For additional information, see Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report.

Transactions with Unconsolidated Entities

In the normal course of business, we enter into various types of on- and off-balance sheet transactions with special purpose entities (SPEs), which are corporations, trusts, limited liability companies or partnerships that are established for a limited purpose. Generally, SPEs are formed in connection with securitization transactions and are considered variable interest entities (VIEs). For additional information, see Note 8 (Securitizations and Variable Interest Entities) to Financial Statements in this Report.

Guarantees and Other Arrangements

Guarantees are contracts that contingently require us to make payments to a guaranteed party based on an event or a change in an underlying asset, liability, rate or index. Guarantees are generally in the form of standby letters of credit, direct pay letters of credit, written options, recourse obligations, exchange and clearing house guarantees, indemnifications, and other types of similar arrangements. For additional information, see Note 11 (Guarantees and Other Commitments) to Financial Statements in this Report.

Commitments to Purchase Debt and Equity Securities

We enter into commitments to purchase securities under resale agreements. We also may enter into commitments to purchase debt and equity securities to provide capital for customers' funding, liquidity or other future needs. For additional information, see Note 11 (Guarantees and Other Commitments) to Financial Statements in this Report.

Derivatives

We use derivatives to manage exposure to market risk, including interest rate risk, credit risk and foreign currency risk, and to assist customers with their risk management objectives. Derivatives are recorded on the consolidated balance sheet at fair value, and volume can be measured in terms of the notional amount, which is generally not exchanged, but is used only as the basis on which interest and other payments are determined. The notional amount is not recorded on the consolidated balance sheet and is not, when viewed in isolation, a meaningful measure of the risk profile of the instruments. For additional information, see Note 14 (Derivatives) to Financial Statements in this Report.

Risk Management

Wells Fargo manages a variety of risks that can significantly affect our financial performance and our ability to meet the expectations of our customers, shareholders, regulators and other stakeholders. For additional information about how we manage risk, see the “Risk Management” section in our 2020 Form 10-K. The discussion that follows supplements our discussion of the management of certain risks contained in the “Risk Management” section in our 2020 Form 10-K.

Credit Risk Management

We define credit risk as the risk of loss associated with a borrower or counterparty default (failure to meet obligations in accordance with agreed upon terms). Credit risk exists with many of our assets and exposures such as debt security holdings, certain derivatives, and loans.

The Board’s Risk Committee has primary oversight responsibility for credit risk. A Credit Subcommittee of the Risk Committee assists the Risk Committee in providing oversight of credit risk. At the management level, Credit Risk, which is part of IRM, has oversight responsibility for credit risk. Credit Risk reports to the CRO and supports periodic reports related to credit risk provided to the Board’s Risk Committee or its Credit Subcommittee.

Loan Portfolio

Our loan portfolios represent the largest component of assets on our consolidated balance sheet for which we have credit risk. Table 9 presents our total loans outstanding by portfolio segment and class of financing receivable.

Table 9: Total Loans Outstanding by Portfolio Segment and Class of Financing Receivable

(in millions)	Mar 31, 2021	Dec 31, 2020
Commercial:		
Commercial and industrial	\$ 319,055	318,805
Real estate mortgage	121,198	121,720
Real estate construction	21,533	21,805
Lease financing	15,734	16,087
Total commercial	477,520	478,417
Consumer:		
Residential mortgage – first lien	254,363	276,674
Residential mortgage – junior lien	21,308	23,286
Credit card	34,246	36,664
Auto	49,210	48,187
Other consumer	24,925	24,409
Total consumer	384,052	409,220
Total loans	\$ 861,572	887,637

We manage our credit risk by establishing what we believe are sound credit policies for underwriting new business, while monitoring and reviewing the performance of our existing loan portfolios. We employ various credit risk management and monitoring activities to mitigate risks associated with multiple risk factors affecting loans we hold including:

- Loan concentrations and related credit quality;
- Counterparty credit risk;
- Economic and market conditions;
- Legislative or regulatory mandates;
- Changes in interest rates;
- Merger and acquisition activities; and
- Reputation risk.

Our credit risk management oversight process is governed centrally, but provides for direct management and accountability by our lines of business. Our overall credit process includes comprehensive credit policies, disciplined credit underwriting, frequent and detailed risk measurement and modeling, extensive credit training programs, and a continual loan review and audit process.

A key to our credit risk management is adherence to a well-controlled underwriting process, which we believe is appropriate for the needs of our customers as well as investors who purchase the loans or securities collateralized by the loans.

Credit Quality Overview Credit quality in first quarter 2021 reflected continued improvement in the economic environment. In particular:

- Nonaccrual loans were \$8.1 billion at March 31, 2021, down from \$8.7 billion at December 31, 2020. Commercial nonaccrual loans decreased to \$4.2 billion at March 31, 2021, compared with \$4.8 billion at December 31, 2020, and consumer nonaccrual loans declined to \$3.8 billion at March 31, 2021, compared with \$3.9 billion at December 31, 2020. Nonaccrual loans represented 0.93% of total loans at March 31, 2021, compared with 0.98% at December 31, 2020.
- Net loan charge-offs as a percentage of our average commercial and consumer loan portfolios were 0.13% and 0.37%, respectively, in first quarter 2021, compared with 0.25% and 0.53% in first quarter 2020.
- Loans that are not government insured/guaranteed and 90 days or more past due and still accruing were \$269 million and \$598 million in our commercial and consumer portfolios, respectively, at March 31, 2021, compared with \$78 million and \$612 million at December 31, 2020.
- Our provision for credit losses for loans was \$(1.1) billion in first quarter 2021, compared with \$3.8 billion for the same period a year ago.
- The ACL for loans decreased to \$18.0 billion, or 2.09% of total loans, at March 31, 2021, compared with \$19.7 billion, or 2.22%, at December 31, 2020.

Additional information on our loan portfolios and our credit quality trends follows.

COVID-Related Lending Accommodations During 2020, we provided accommodations to customers in response to the COVID-19 pandemic, including payment deferrals, and other expanded assistance for mortgage, credit card, auto, small business, personal and commercial lending customers. With the exception of residential mortgage-related accommodation programs, the COVID-related lending accommodations instituted during 2020 were no longer offered as of December 31, 2020. Residential mortgage accommodation programs, which continued during first quarter 2021, offered payment deferrals for up to a total of 18 months. Table 10 summarizes the unpaid principal balance (UPB) of consumer loans that received accommodations under loan modification programs established to assist customers with the economic impact of the COVID-19 pandemic (COVID-related modifications) and that remained in a deferral period as of March 31, 2021.

Based on guidance in the CARES Act and the *Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus (Revised)* issued by federal banking regulators in April 2020 (the Interagency Statement), both of which we elected to apply, loan modifications related to COVID-19 and that meet certain other criteria are exempt from troubled debt restructuring (TDR) classification. Additionally, our election to apply the TDR relief provided by the CARES Act and the Interagency Statement impacts our regulatory capital ratios as these loan modifications

related to COVID-19 are not adjusted to a higher risk-weighting normally required with TDR classification. At March 31, 2021, substantially all residential mortgage loans that were in a deferral period, excluding those that were government insured/guaranteed, met the criteria for TDR relief and were therefore not classified as TDRs. For additional information regarding the TDR relief provided by the CARES Act and the clarifying TDR accounting guidance from the Interagency Statement, see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

Customer payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of net charge-offs, delinquencies, and nonaccrual status for those customers who would have otherwise moved into past due or nonaccrual status. Customer loans that are not further modified upon exit from the deferral period may be placed on nonaccrual status or charged-off in accordance with our policies if customers are unable to resume making payments in accordance with the contractual terms of their agreement. As of March 31, 2021, substantially all of our consumer loans were current after exiting the deferral period. For additional information about our COVID-related modifications, see the “Risk Management – Credit Risk Management – COVID-Related Lending Accommodations” section and Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

Table 10: Consumer Loan Modifications Related to COVID-19

(\$ in millions)	Unpaid principal balance of modified loans still in deferral period at Mar 31, 2021	% of loan class (1)	% current at Mar 31, 2021 after exit from deferral period (2)
Consumer:			
Residential mortgage – first lien (3)	\$ 9,210	4 %	97
Residential mortgage – junior lien (3)	1,274	6	93
All other consumer (4)	221	*	92
Subtotal	10,705	3	
Residential mortgage – first lien (government insured/guaranteed) (5)	14,165	6	
Total consumer	\$ 24,870		

* Less than 1%.

(1) Based on total loans outstanding at March 31, 2021.

(2) Represents the UPB of loans that exited the deferral period and had a balance that was less than 30 days past due as of March 31, 2021.

(3) For residential mortgage loans still in active COVID-related accommodation programs as of March 31, 2021, 95% of first lien and 84% of junior lien mortgage loans had a loan-to-value ratio that was 80% or lower.

(4) Includes credit card, auto, and other consumer loans (including personal lines/loans).

(5) Represents residential mortgage – first lien loans insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA) that were primarily repurchased from GNMA loan securitization pools. For additional information on GNMA loan securitization pools, see the “Risk Management – Credit Risk Management – Risks Relating to Servicing Activities” section in this Report. FHA/VA loans are entitled to payment deferrals of scheduled principal and interest up to a total of 18 months.

Significant Loan Portfolio Reviews Measuring and monitoring our credit risk is an ongoing process that tracks delinquencies, collateral values, Fair Isaac Corporation (FICO) scores, economic trends by geographic areas, loan-level risk grading for certain portfolios (typically commercial) and other indications of credit risk. Our credit risk monitoring process is designed to enable early identification of developing risk and to support our determination of an appropriate allowance for credit losses. The following discussion provides additional characteristics and analysis of our significant portfolios. See Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report for more analysis and credit metric information for each of the following portfolios.

COMMERCIAL AND INDUSTRIAL LOANS AND LEASE FINANCING For purposes of portfolio risk management, we aggregate commercial and industrial loans and lease financing according to market segmentation and standard industry codes. We generally subject commercial and industrial loans and lease

financing to individual risk assessment using our internal borrower and collateral quality ratings. Our ratings are aligned to regulatory definitions of pass and criticized categories with criticized segmented among special mention, substandard, doubtful and loss categories.

We had \$18.0 billion of the commercial and industrial loan and lease financing portfolio internally classified as criticized in accordance with regulatory guidance at March 31, 2021, compared with \$19.3 billion at December 31, 2020. The change was driven by decreases in the oil, gas and pipelines, technology, telecom and media, and financials except banks industries reflecting improvement in the economic environment.

The majority of our commercial and industrial loans and lease financing portfolio is secured by short-term assets, such as accounts receivable, inventory and debt securities, as well as long-lived assets, such as equipment and other business assets. Generally, the primary source of repayment for this portfolio is the operating cash flows of customers, with the collateral

Risk Management – Credit Risk Management (continued)

securing this portfolio representing a secondary source of repayment.

The portfolio remained flat at March 31, 2021, compared with December 31, 2020, as a result of limited loan draws offset

by paydowns. Table 11 provides our commercial and industrial loans and lease financing by industry. The industry categories are based on the North American Industry Classification System.

Table 11: Commercial and Industrial Loans and Lease Financing by Industry

* Less than 1%.

(1) Total commitments consist of loans outstanding plus unfunded credit commitments, excluding issued letters of credit.

(2) No other single industry had total loans in excess of \$3.8 billion at both March 31, 2021, and December 31, 2020.

Loans to financials except banks, our largest industry concentration, is predominantly comprised of loans to investment firms, financial vehicles, and nonbank creditors. We had \$84.5 billion and \$80.0 billion of loans originated by our Asset Backed Finance (ABF) and Financial Institution Group (FIG) lines of business at March 31, 2021, and December 31, 2020, respectively. These loans include: (i) loans to customers related to their subscription or capital calls, (ii) loans to nonbank lenders collateralized by commercial loans, and (iii) loans to originators or servicers of financial assets collateralized by residential real estate or other consumer loans such as credit cards, auto loans and leases, student loans and other financial assets eligible for the securitization market. These ABF and FIG loans are limited to a percentage of the value of the underlying financial assets considering underlying credit risk, asset duration, and ongoing performance. These ABF and FIG loans may also have other features to manage credit risk such as cross-collateralization, credit enhancements, and contractual re-margining of collateral supporting the loans. In addition, loans to financials except banks included collateralized loan obligations (CLOs) in loan form, all of which were rated AA or above, of \$8.1 billion and \$7.9 billion at March 31, 2021, and December 31, 2020, respectively. We had a prime brokerage relationship with Archegos Capital Management, which was closed out as of March 31, 2021. We did not experience losses related to closing out our exposure.

Oil, gas and pipelines loans included \$6.8 billion and \$7.5 billion of senior secured loans outstanding at March 31, 2021, and December 31, 2020, respectively. Oil, gas and

pipelines nonaccrual loans decreased at March 31, 2021, compared with December 31, 2020, driven by loan payoffs.

We continue to perform escalated credit monitoring for certain industries that we consider to be directly and most adversely affected by the COVID-19 pandemic.

Our commercial and industrial loans and lease financing portfolio also includes non-U.S. loans of \$70.1 billion and \$63.8 billion at March 31, 2021, and December 31, 2020, respectively. Significant industry concentrations of non-U.S. loans at March 31, 2021, and December 31, 2020, respectively, included:

- \$42.5 billion and \$36.2 billion in the financials except banks category;
- \$13.0 billion and \$12.8 billion in the banks category; and
- \$1.7 billion and \$1.6 billion in the oil, gas and pipelines category.

COMMERCIAL REAL ESTATE (CRE) We generally subject CRE loans to individual risk assessment using our internal borrower and collateral quality ratings. Our ratings are aligned to regulatory definitions of pass and criticized categories with criticized segmented among special mention, substandard, doubtful and loss categories. We had \$12.0 billion of CRE mortgage loans classified as criticized at both March 31, 2021, and December 31, 2020, and \$1.9 billion of CRE construction loans classified as criticized at March 31, 2021, compared with \$1.6 billion at December 31, 2020. The increase in criticized CRE construction loans was driven by the apartment, institutional, and shopping

center property types and reflected the economic impact of the COVID-19 pandemic. Due to the significant uncertainty related to the duration and severity of the economic impact of the COVID-19 pandemic, the credit quality of certain property types within our CRE loan portfolio, such as retail, hotel/motel, office buildings, and shopping centers, could continue to be adversely affected.

The total CRE loan portfolio decreased \$794 million from December 31, 2020, driven by a decrease in CRE mortgage loans predominantly related to the office, retail (excluding shopping

center), and shopping center property types. The CRE loan portfolio included \$8.7 billion of non-U.S. CRE loans at March 31, 2021. The portfolio is diversified both geographically and by property type. The largest geographic concentrations of CRE loans are in California, New York, Florida and Texas, which combined represented 48% of the total CRE portfolio. The largest property type concentrations are office buildings at 26% and apartments at 20% of the portfolio.

Table 12 summarizes CRE loans by state and property type with the related nonaccrual totals at March 31, 2021.

Table 12: CRE Loans by State and Property Type

(\$ in millions)	March 31, 2021							% of total loans

* Less than 1%.

(1) Includes 40 states; no state in Other had loans in excess of \$3.6 billion.

Risk Management – Credit Risk Management (continued)

NON-U.S. LOANS Our classification of non-U.S. loans is based on whether the borrower’s primary address is outside of the United States. At March 31, 2021, non-U.S. loans totaled \$79.1 billion, representing approximately 9% of our total consolidated loans outstanding, compared with \$72.9 billion, or approximately 8% of our total consolidated loans outstanding, at December 31, 2020. Non-U.S. loans were approximately 4% of our total consolidated assets at both March 31, 2021, and December 31, 2020.

COUNTRY RISK EXPOSURE Our country risk monitoring process incorporates centralized monitoring of economic, political, social, legal, and transfer risks in countries where we do or plan to do business, along with frequent dialogue with our customers, counterparties and regulatory agencies. We establish exposure limits for each country through a centralized oversight process based on customer needs, and through consideration of the relevant and distinct risk of each country. We monitor exposures closely and adjust our country limits in response to changing conditions. We evaluate our individual country risk exposure based on our assessment of the borrower’s ability to repay, which gives consideration for allowable transfers of risk, such as guarantees and collateral, and may be different from the reporting based on the borrower’s primary address.

Our largest single country exposure outside the U.S. at March 31, 2021, was the United Kingdom, which totaled \$36.1 billion, or approximately 2% of our total assets, and included \$8.8 billion of sovereign claims. Our United Kingdom sovereign claims arise predominantly from deposits we have placed with the Bank of England pursuant to regulatory requirements in support of our London branch.

Table 13 provides information regarding our top 20 exposures by country (excluding the U.S.), based on our assessment of risk, which gives consideration to the country of any guarantors and/or underlying collateral. With respect to Table 13:

- Lending and deposits exposure includes outstanding loans, unfunded credit commitments, and deposits with non-U.S. banks. These balances are presented prior to the deduction of allowance for credit losses or collateral received under the terms of the credit agreements, if any.
- Securities exposure represents debt and equity securities of non-U.S. issuers. Long and short positions are netted, and net short positions are reflected as negative exposure.
- Derivatives and other exposure represents foreign exchange contracts, derivative contracts, securities resale agreements, and securities lending agreements.

Table 13: Select Country Exposures

(in millions)	March 31, 2021								Total

(1) Total non-sovereign exposure comprised \$46.8 billion exposure to financial institutions and \$43.5 billion to non-financial corporations at March 31, 2021.

RESIDENTIAL MORTGAGE LOANS Our residential mortgage loan portfolio is comprised of 1-4 family first and junior lien mortgage loans. Residential mortgage – first lien loans comprised 92% of the total residential mortgage loan portfolio at both March 31, 2021, and December 31, 2020.

The residential mortgage loan portfolio includes some loans with adjustable-rate features and some with an interest-only feature as part of the loan terms. Interest-only loans were approximately 3% of total loans at both March 31, 2021, and December 31, 2020. We believe our origination process appropriately addresses our adjustable-rate mortgage (ARM) reset risk across our residential mortgage loan portfolios and our ACL for loans considers this risk. We do not offer option ARM products, nor do we offer variable-rate mortgage products with

fixed payment amounts, commonly referred to within the financial services industry as negative amortizing mortgage loans.

We continue to modify residential mortgage loans to assist homeowners and other borrowers experiencing financial difficulties. For additional information on our modification programs, see the “Risk Management – Credit Risk Management – Residential Mortgage Loans” section in our 2020 Form 10-K. For additional information on customer accommodations, including loan modifications, in response to the COVID-19 pandemic, see the “Risk Management – Credit Risk Management – COVID-Related Lending Accommodations” section in this Report.

We monitor changes in real estate values and underlying economic or market conditions for all geographic areas of our residential mortgage portfolios as part of our credit risk management process. Our underwriting and periodic review of loans and lines secured by residential real estate collateral includes original appraisals adjusted for the change in Home Price Index (HPI) or estimates from automated valuation models (AVMs) to support property values. Additional information about appraisals, AVMs, and our policy for their use can be found in Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report and the “Risk Management – Credit Risk Management – Residential Mortgage Loans” section in our 2020 Form 10-K.

Part of our credit monitoring includes tracking delinquency, current FICO scores and loan/combined loan to collateral values (LTV/CLTV) on the entire residential mortgage loan portfolio. Excluding government insured/guaranteed loans, these credit risk indicators on the residential mortgage portfolio were:

- Loans 30 days or more delinquent at March 31, 2021, totaled \$4.1 billion, or 1% of total mortgages, compared with \$4.7 billion, or 2%, at December 31, 2020. Customer payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies;
- Loans with FICO scores lower than 640 totaled \$4.9 billion, or 2% of total mortgages at March 31, 2021, compared with \$5.6 billion, or 2%, at December 31, 2020; and
- Mortgages with a LTV/CLTV greater than 100% totaled \$1.3 billion at March 31, 2021, or less than 1% of total mortgages, compared with \$1.6 billion, or 1%, at December 31, 2020.

Information regarding credit quality indicators can be found in Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report. Residential mortgage loans by state are presented in Table 14.

Table 14: Residential Mortgage Loans by State

(\$ in millions)	March 31, 2021			
	Residential mortgage – first lien	Residential mortgage – junior lien	Total residential mortgage	% of total loans
Residential mortgage loans:				
California (1)	\$ 97,322	5,646	102,968	12 %
New York	30,132	1,185	31,317	4

Government insured/guaranteed loans (3)	25,122	—	25,122	3
Total	\$ 254,363	21,308	275,671	32 %

(1) Our residential mortgage loans to borrowers in California are located predominantly within the larger metropolitan areas, with no single California metropolitan area consisting of more than 4% of total loans.

(2) Consists of 41 states; no state in Other had loans in excess of \$5.3 billion.

(3) Represents loans whose repayments are predominantly insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA).

Risk Management – Credit Risk Management (continued)

Residential Mortgage – First Lien Portfolio Our total residential mortgage – first lien portfolio decreased \$22.3 billion from December 31, 2020, driven by loan paydowns as a result of the low interest rate environment and the transfer of \$5.9 billion of first lien mortgage loans to loans held for sale (LHFS), partially offset by originations of \$12.5 billion.

Table 15 shows certain delinquency and loss information for the residential mortgage – first lien portfolio and lists the top five states by outstanding balance.

Table 15: Residential Mortgage – First Lien Portfolio Performance

Total first mortgage portfolio	\$ 254,363	276,674							

Residential Mortgage – Junior Lien Portfolio The residential mortgage – junior lien portfolio consists of residential mortgage lines and loans that are subordinate in rights to an existing lien on the same property. It is not unusual for these lines and loans to have draw periods, interest-only payments, balloon payments, adjustable rates and similar features. Junior lien loan products are primarily amortizing payment loans with fixed interest rates and repayment periods between five to 30 years. We continuously monitor the credit performance of our residential mortgage – junior lien portfolio for trends and factors that influence the

frequency and severity of losses, such as residential mortgage – junior lien performance when the residential mortgage – first lien loan is delinquent.

The decrease in the residential mortgage – junior lien portfolio at March 31, 2021, compared with December 31, 2020, reflected loan paydowns. Beginning in second quarter 2020, we suspended the origination of residential mortgage – junior lien loans. Table 16 shows certain delinquency and loss information for the residential mortgage – junior lien portfolio and lists the top five states by outstanding balance.

Table 16: Residential Mortgage – Junior Lien Portfolio Performance

Total junior lien mortgage portfolio	\$ 21,308	23,286	2.34	2.41	(0.35)	(0.39)	(0.22)	(0.17)	(0.07)

As of March 31, 2021, with respect to loans in the residential mortgage – junior lien portfolio that had a CLTV ratio in excess of 100%:

- such loans totaled 3% of the outstanding balance of the residential mortgage – junior lien portfolio;
- 2% were 30 days or more past due. Customer payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies; and
- the unsecured portion (the outstanding amount that was in excess of the most recent property collateral value) of the outstanding balances of these loans totaled 1% of the residential mortgage – junior lien portfolio.

CLTV represents the ratio of the total loan balance of first and junior lien mortgages (including unused line amounts for credit line products) to property collateral value. For additional information on consumer loans by LTV/CLTV, see Table 4.11 in Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report.

Residential Mortgage – Junior Lien Line and Loan and

Residential Mortgage – First Lien Line Our junior lien, as well as first lien, lines of credit portfolios generally have draw periods of 10, 15 or 20 years with variable interest rate and payment options available during the draw period of (1) interest-only or (2) 1.5% of outstanding principal balance plus accrued interest. As of March 31, 2021, lines of credit in a draw period primarily used the interest-only option.

During the draw period, the borrower has the option of converting all or a portion of the line from a variable interest rate to a fixed rate with terms including interest-only payments for a fixed period between three to seven years or a fully amortizing payment with a fixed period between five to 30 years. At the end of the draw period, a line of credit generally converts to an amortizing payment schedule with repayment terms of up to 30 years based on the balance at time of conversion. Certain lines and loans have been structured with a balloon payment, which requires full repayment of the outstanding balance at the end of the term period. The conversion of lines or loans to fully amortizing or balloon payoff may result in a significant payment

increase, which can affect some borrowers' ability to repay the outstanding balance.

The lines that enter their amortization period may experience higher delinquencies and higher loss rates than the ones in their draw or term period. We have considered this increased risk in our ACL for loans estimate.

In anticipation of our borrowers reaching the end of their contractual commitment, we have created a program to inform, educate and help these borrowers transition from interest-only to fully-amortizing payments or full repayment. We monitor the performance of the borrowers moving through the program in an effort to refine our ongoing program strategy.

Table 17 reflects the outstanding balance of our portfolio of residential mortgage – junior liens, including lines and loans, and residential mortgage – first lien lines segregated into scheduled end of draw or end-of-term periods and products that are currently amortizing, or in balloon repayment status. The unfunded credit commitments for residential mortgage – junior and first lien lines totaled \$51.9 billion at March 31, 2021.

Table 17: Residential Mortgage – Junior Lien Line and Loan and Residential Mortgage – First Lien Line Portfolios Payment Schedule

(\$ in millions)	Outstanding balance March 31, 2021	Scheduled end of draw/term						
		Remainder of 2021	2022	2023	2024	2025	2026 and thereafter (1)	Amortizing (2)
Residential mortgage – junior lien lines and loans	\$ 21,308	494	2,462	1,669	1,326	2,207	6,558	6,592
Residential mortgage – first lien lines	8,401	270	1,295	975	760	1,041	2,622	1,438
Total	\$ 29,709	764	3,757	2,644	2,086	3,248	9,180	8,030
% of portfolios	100 %	3	13	9	7	11	31	26

(1) Substantially all lines and loans are scheduled to convert to amortizing loans by the end of 2030, with annual scheduled amounts through 2030 ranging from \$1.0 billion to \$3.5 billion and averaging \$1.8 billion per year.

(2) Includes \$69 million of end-of-term balloon payments which were past due.

At March 31, 2021, \$344 million, or 2%, of lines in their draw period were 30 days or more past due, compared with \$351 million, or 5%, of amortizing lines of credit. Customer payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies. On a monthly basis, we monitor the payment characteristics of borrowers in our residential mortgage – first and junior lien lines of credit portfolios. In March 2021, excluding borrowers with COVID-related loan modification payment deferrals:

- Approximately 42% of these borrowers paid only the minimum amount due and approximately 53% paid more than the minimum amount due. The rest were either delinquent or paid less than the minimum amount due.
- For the borrowers with an interest-only payment feature, approximately 27% paid only the minimum amount due and approximately 69% paid more than the minimum amount due.

CREDIT CARD Our credit card portfolio totaled \$34.2 billion at March 31, 2021, compared with \$36.7 billion at December 31, 2020. The decrease in the outstanding balance at March 31, 2021, compared with December 31, 2020, was driven by seasonal paydowns.

AUTO Our auto portfolio totaled \$49.2 billion at March 31, 2021, compared with \$48.2 billion at December 31, 2020. The outstanding balance at March 31, 2021, compared with December 31, 2020, increased slightly as originations exceeded paydowns.

OTHER CONSUMER Other consumer loans, which include revolving credit and installment loans, totaled \$24.9 billion at March 31, 2021, compared with \$24.4 billion at December 31, 2020.

Table 18: Credit Card, Auto, and Other Consumer Loans

(\$ in millions)	March 31, 2021		December 31, 2020	
	Outstanding balance	% of total loans	Outstanding balance	% of total loans
Credit card	\$ 34,246	3.97%	\$ 36,664	4.13%
Auto	49,210	5.71	48,187	5.43
Other consumer (1)	24,925	2.89	24,409	2.75
Total	\$ 108,381	12.58%	\$ 109,260	12.31%

(1) Other consumer loans primarily include securities-based loans.

Risk Management – Credit Risk Management (continued)

NONPERFORMING ASSETS (NONACCRUAL LOANS AND FORECLOSED ASSETS) For information about when we generally place loans on nonaccrual status, see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K. Customer payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of nonaccrual loans for those customers who would have otherwise moved into nonaccrual status. For additional

information on customer accommodations, including loan modifications, in response to the COVID-19 pandemic, see the “Risk Management – Credit Risk Management – COVID-Related Lending Accommodations” section in this Report.

Table 19 summarizes nonperforming assets (NPAs) for each of the last four quarters.

Table 19: Nonperforming Assets (Nonaccrual Loans and Foreclosed Assets)

Total foreclosed assets	140		159		156		195	
Total nonperforming assets	\$ 8,195	0.95 %	\$ 8,887	1.00 %	\$ 8,178	0.89 %	\$ 7,800	0.83 %
Change in NPAs from prior quarter	\$ (692)		\$ 709		\$ 378		\$ 1,392	

(1) Residential mortgage loans predominantly insured by the FHA or guaranteed by the VA are not placed on nonaccrual status because they are insured or guaranteed.

(2) Consistent with regulatory reporting requirements, foreclosed real estate resulting from government insured/guaranteed loans are classified as nonperforming. Both principal and interest related to these foreclosed real estate assets are collectible because the loans were predominantly insured by the FHA or guaranteed by the VA. Receivables related to the foreclosure of certain government guaranteed real estate mortgage loans are excluded from this table and included in Accounts Receivable in Other Assets. For additional information on foreclosed assets, see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

Commercial nonaccrual loans decreased \$549 million from December 31, 2020, driven by a decline in commercial and industrial nonaccrual loans in the oil, gas and pipelines industry reflecting improvement in the economic environment. For additional information on commercial and industrial nonaccrual loans, see the “Risk Management – Credit Risk Management – Commercial and Industrial Loans and Lease Financing” section in this Report.

Consumer nonaccrual loans decreased \$124 million from December 31, 2020, driven by a decline in residential mortgage nonaccrual loans.

Table 20 provides an analysis of the changes in nonaccrual loans. Typically, changes to nonaccrual loans period-over-period represent inflows for loans that are placed on nonaccrual status in accordance with our policies, offset by reductions for loans that are paid down, charged off, sold, foreclosed, or are no longer

classified as nonaccrual as a result of continued performance and an improvement in the borrower's financial condition and loan repayment capabilities.

Table 20: Analysis of Changes in Nonaccrual Loans

(\$ in millions)	Quarter ended				
	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020	Mar 31, 2020

Balance, beginning of period	\$ 4,779	4,398	4,285	2,875	2,254
Inflows	773	1,696	1,316	2,741	1,479
Outflows:					
Returned to accruing	(177)	(99)	(166)	(64)	(56)
Foreclosures	(6)	(37)	—	—	—
Charge-offs	(202)	(367)	(382)	(560)	(360)
Payments, sales and other	(937)	(812)	(655)	(707)	(442)
Total outflows	(1,322)	(1,315)	(1,203)	(1,331)	(858)
Balance, end of period	4,230	4,779	4,398	4,285	2,875
Consumer nonaccrual loans					
Balance, beginning of period	3,949	3,624	3,320	3,281	3,092
Inflows	454	792	696	379	749
Outflows:					
Returned to accruing	(152)	(208)	(160)	(135)	(254)
Foreclosures	(19)	(5)	(4)	(6)	(21)
Charge-offs	(26)	(36)	(36)	(39)	(48)
Payments, sales and other	(381)	(218)	(192)	(160)	(237)
Total outflows	(578)	(467)	(392)	(340)	(560)
Balance, end of period	3,825	3,949	3,624	3,320	3,281
Total nonaccrual loans	\$ 8,055	8,728	8,022	7,605	6,156

We believe exposure to loss on nonaccrual loans is mitigated by the following factors at March 31, 2021:

- 94% of total commercial nonaccrual loans and 99% of total consumer nonaccrual loans are secured. Of the consumer nonaccrual loans, 94% are secured by real estate and 91% have a combined LTV (CLTV) ratio of 80% or less.
- losses of \$661 million and \$1.0 billion have already been recognized on 16% of commercial nonaccrual loans and 30% of consumer nonaccrual loans, respectively, in accordance with our charge-off policies. Once we write down loans to the net realizable value (fair value of collateral less estimated costs to sell), we re-evaluate each loan regularly and record additional write-downs if needed.
- 75% of commercial nonaccrual loans were current on interest and 66% of commercial nonaccrual loans were current on both principal and interest, but were on nonaccrual status because the full or timely collection of interest or principal had become uncertain.

- of the \$1.1 billion of consumer loans in bankruptcy or discharged in bankruptcy, and classified as nonaccrual, \$723 million were current.
- the remaining risk of loss of all nonaccrual loans has been considered in developing our allowance for loan losses.

We continue to work with our customers experiencing financial difficulty to determine if they can qualify for a loan modification. Under our proprietary modification programs, customers may be required to provide updated documentation, and some programs require completion of payment during trial periods to demonstrate sustained performance before the loan can be removed from nonaccrual status.

Risk Management – Credit Risk Management (continued)

Table 21 provides a summary of foreclosed assets and an analysis of changes in foreclosed assets.

Table 21: Foreclosed Assets

(\$ in millions)	Quarter ended				
	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020	Mar 31, 2020
Summary by loan segment					
Government insured/guaranteed	\$ 16	18	22	31	43
Commercial	64	70	39	45	49
Consumer	60	71	95	119	160
Total foreclosed assets	\$ 140	159	156	195	252
Analysis of changes in foreclosed assets					
Balance, beginning of period	\$ 159	156	195	252	303
Net change in government insured/guaranteed (1)	(2)	(4)	(9)	(12)	(7)
Additions to foreclosed assets (2)	88	114	60	51	107
Reductions:					
Sales	(107)	(104)	(88)	(98)	(154)
Write-downs and gains (losses) on sales	2	(3)	(2)	2	3
Total reductions	(105)	(107)	(90)	(96)	(151)
Balance, end of period	\$ 140	159	156	195	252

(1) Foreclosed government insured/guaranteed loans are temporarily transferred to and held by us as servicer, until reimbursement is received from FHA or VA.

(2) Includes loans moved into foreclosed assets from nonaccrual status and repossessed autos.

Foreclosed assets at March 31, 2021, included \$59 million of foreclosed residential real estate, of which 28% is predominantly FHA insured or VA guaranteed and expected to have minimal or no loss content. The remaining amount of foreclosed assets has been written down to estimated net realizable value. Of the \$140 million in foreclosed assets at March 31, 2021, 56% have been in the foreclosed assets portfolio for one year or less.

As part of our actions to support customers during the COVID-19 pandemic, we have temporarily suspended certain mortgage foreclosure activities, which has affected the amount of our foreclosed assets. For additional information on loans in process of foreclosure, see Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report.

TROUBLED DEBT RESTRUCTURINGS (TDRs) Table 22 provides information regarding the recorded investment of loans modified in TDRs. TDRs at March 31, 2021, decreased, compared with December 31, 2020, due to paydowns primarily in the commercial and industrial portfolio. The amount of our TDRs at March 31, 2021, would have otherwise been higher without the TDR relief provided by the CARES Act and Interagency Statement.

Table 22: TDR Balances

(\$ in millions)	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020	Mar 31, 2020
Commercial:					
Commercial and industrial	\$ 1,331	1,933	2,082	1,882	1,302
Real estate mortgage	652	774	805	717	697
Real estate construction	21	15	21	20	33
Lease financing	9	9	9	10	10
Total commercial TDRs	2,013	2,731	2,917	2,629	2,042
Consumer:					
Residential mortgage – first lien	9,446	9,764	9,420	7,176	7,284
Residential mortgage – junior lien	1,174	1,237	1,298	1,309	1,356
Credit card	411	458	494	510	527
Auto	156	176	156	108	76
Other consumer	67	67	190	173	172
Trial modifications	81	90	91	91	108
Total consumer TDRs	11,335	11,792	11,649	9,367	9,523
Total TDRs	\$ 13,348	14,523	14,566	11,996	11,565
TDRs on nonaccrual status	\$ 3,800	4,456	4,163	3,475	2,846
TDRs on accrual status:					
Government insured/guaranteed	3,708	3,721	3,467	1,277	1,157
Non-government insured/guaranteed	5,840	6,346	6,936	7,244	7,562
Total TDRs	\$ 13,348	14,523	14,566	11,996	11,565

In those situations where principal is forgiven, the entire amount of such forgiveness is immediately charged off. When we delay the timing on the repayment of a portion of principal (principal forbearance), we charge off the amount of forbearance if that amount is not considered fully collectible. The allowance for loan losses for TDRs was \$509 million and \$565 million at March 31, 2021, and December 31, 2020, respectively. As part of our actions to support customers during the COVID-19 pandemic, we have provided borrowers relief in the form of loan modifications. Under the CARES Act and the Interagency Statement, loan modifications related to the COVID-19 pandemic will not be classified as TDRs if they meet certain eligibility criteria. For additional information on the CARES Act

and the Interagency Statement, see the “Risk Management – Credit Risk Management – Credit Quality Overview – COVID-Related Lending Accommodations” section in this Report.

For information on our nonaccrual policies when a restructuring is involved, see the “Risk Management – Credit Risk Management – Troubled Debt Restructurings (TDRs)” section in our 2020 Form 10-K.

Table 23 provides an analysis of the changes in TDRs. Loans modified more than once as a TDR are reported as inflows only in the period they are first modified. In addition to foreclosures, sales and transfers to held for sale, we may remove loans from TDR classification, but only if they have been refinanced or restructured at market terms and qualify as a new loan.

Table 23: Analysis of Changes in TDRs

(\$ in millions)	Quarter ended				
	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020	Mar 31, 2020
Commercial TDRs					
Balance, beginning of period	\$ 2,731	2,917	2,629	2,042	1,901

Foreclosure	(5)	—	—	—	—
Payments, sales and other (2)	(819)	(600)	(501)	(324)	(255)
Balance, end of period	2,013	2,731	2,917	2,629	2,042
Consumer TDRs					
Balance, beginning of period	11,792	11,649	9,367	9,523	9,882
Inflows (1)	633	1,226	2,805	425	312
Outflows					
Charge-offs	(43)	(57)	(58)	(46)	(63)
Foreclosure	(14)	(5)	(7)	(8)	(57)
Payments, sales and other (2)	(1,024)	(1,020)	(458)	(510)	(544)
Net change in trial modifications (3)	(9)	(1)	—	(17)	(7)
Balance, end of period	11,335	11,792	11,649	9,367	9,523
Total TDRs	\$ 13,348	14,523	14,566	11,996	11,565

- (1) Inflows include loans that modify, even if they resolve within the period, as well as gross advances on term loans that modified in a prior period and net advances on revolving TDRs that modified in a prior period.
- (2) Other outflows include normal amortization/accretion of loan basis adjustments and loans transferred to held for sale. Occasionally, loans that have been refinanced or restructured at market terms qualify as new loans, which are also included as other outflows.
- (3) Net change in trial modifications includes: inflows of new TDRs entering the trial payment period, net of outflows for modifications that either (i) successfully perform and enter into a permanent modification, or (ii) did not successfully perform according to the terms of the trial period plan and are subsequently charged-off, foreclosed upon or otherwise resolved.

Risk Management – Credit Risk Management (continued)

LOANS 90 DAYS OR MORE PAST DUE AND STILL ACCRUING Loans 90 days or more past due are still accruing if they are (1) well-secured and in the process of collection or (2) residential mortgage loans or consumer loans exempt under regulatory rules from being classified as nonaccrual until later delinquency, usually 120 days past due.

Table 24 reflects loans 90 days or more past due and still accruing by class for loans not government insured/guaranteed. For additional information on delinquencies by loan class, see Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report.

Table 24: Loans 90 Days or More Past Due and Still Accruing

(\$ in millions)	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020	Mar 31, 2020
Total:	\$ 6,273	7,041	11,698	9,739	7,023
Less: FHA insured/VA guaranteed (1)	5,406	6,351	11,041	8,922	6,142
Total, not government insured/guaranteed	\$ 867	690	657	817	881
By segment and class, not government insured/guaranteed:					
Commercial:					
Commercial and industrial	\$ 55	39	61	101	24
Real estate mortgage	128	38	47	44	28
Real estate construction	86	1	—	—	1
Total commercial	269	78	108	145	53

Total consumer	598	612	549	672	828
Total, not government insured/guaranteed	\$ 867	690	657	817	881

(1) Represents loans whose repayments are predominantly insured by the FHA or guaranteed by the VA.

Loans 90 days or more past due and still accruing, excluding government insured/guaranteed loans, at March 31, 2021, were up from December 31, 2020, due to an increase in delinquent commercial real estate mortgage and construction loans. Customer payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies for customers who would have otherwise moved into past due status.

Loans 90 days or more past due and still accruing whose repayments are largely insured by the FHA or guaranteed by the VA for mortgages at March 31, 2021, were down from December 31, 2020, consistent with the overall decrease in residential mortgage loans.

NET CHARGE-OFFS Table 25 presents net loan charge-offs for first quarter 2021 and the previous four quarters.

Table 25: Net Loan Charge-offs

(1) Quarterly net charge-offs as a percentage of average respective loans are annualized.

The decrease in commercial net loan charge-offs in first quarter 2021, compared with the prior quarter, was driven by:

- lower commercial and industrial loan losses primarily in the oil, gas and pipelines industry; and
- lower commercial real estate mortgage loan losses primarily in the shopping center property type.

The increase in consumer net loan charge-offs in first quarter 2021, compared with the prior quarter, was driven by:

- credit card customers who exited deferral programs; and
- additional losses in other consumer loans due to the sale of a portion of our student loan portfolio.

The COVID-19 pandemic may continue to impact the credit quality of our loan portfolio. Although the potential impacts were considered in our allowance for credit losses for loans, payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of net loan charge-offs. For additional information on customer accommodations in response to the COVID-19 pandemic, see the “Risk Management – Credit Risk Management – COVID-Related Lending Accommodations” section in this Report.

ALLOWANCE FOR CREDIT LOSSES We maintain an allowance for credit losses (ACL) for loans, which is management’s estimate of the expected credit losses in the loan portfolio and unfunded credit commitments, at the balance sheet date, excluding loans and unfunded credit commitments carried at fair value or held for sale. Additionally, we maintain an ACL for debt securities classified as either AFS or HTM, other financial assets measured at amortized cost, net investments in leases, and other off-balance sheet credit exposures.

We apply a disciplined process and methodology to establish our ACL each quarter. The process for establishing the ACL for loans takes into consideration many factors, including historical and forecasted loss trends, loan-level credit quality ratings and loan grade-specific characteristics. The process involves subjective and complex judgments. In addition, we review a variety of credit metrics and trends. These credit metrics and trends, however, do not solely determine the amount of the allowance as we use several analytical tools. For additional information on our ACL, see the “Critical Accounting Policies – Allowance for Credit Losses” section and Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K. For additional information on our ACL for loans, see Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report, and for additional information on our ACL for debt securities, see the “Balance Sheet Analysis – Available-For-Sale and Held-To-Maturity Debt Securities” section and Note 3 (Available-for-Sale and Held-to-Maturity Debt Securities) to Financial Statements in this Report.

Risk Management – Credit Risk Management (continued)

Table 26 presents the allocation of the ACL for loans by loan portfolio segment and class for the most recent quarter and last four year ends.

Table 26: Allocation of the ACL for Loans (1)

- (1) Disclosure is not comparative due to our adoption of Accounting Standards Update (ASU) 2016-13, Financial Instruments - Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments (CECL) on January 1, 2020. For additional information, see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.
- (2) Total net loan charge-offs are annualized for the quarter ended March 31, 2021.

The ratios for the allowance for loan losses and the ACL for loans presented in Table 26 may fluctuate from period to period due to such factors as the mix of loan types in the portfolio, borrower credit strength, and the value and marketability of collateral.

The ACL for loans decreased \$1.7 billion, or 8%, from December 31, 2020, reflecting continued improvement in the economic environment. Total provision for credit losses for loans was \$(1.1) billion in first quarter 2021, compared with \$3.8 billion in the same period a year ago, reflecting lower net charge-offs and improvement in the economic environment. The detail of the changes in the ACL for loans by portfolio segment (including charge-offs and recoveries by loan class) is included in Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report.

We consider multiple economic scenarios to develop our estimate of the ACL for loans. The scenarios generally include a base scenario, along with an optimistic (upside) and one or more pessimistic (downside) scenarios. Our estimate of the ACL for loans at March 31, 2021, was based on a weighting of the base and a downside economic scenario of 50% and 50%, respectively, with no weighting applied to an upside scenario. The base scenario assumed economic improvements in the near term with a return to normalized levels near the end of 2022. The downside scenario assumed more sustained adverse economic impacts resulting from the COVID-19 pandemic, compared with the base scenario. The downside scenario assumed U.S. real GDP growth

rates increasing in the near term followed by a decline with a return to normalized levels after 2023 and a sustained elevation in the U.S. unemployment rate until late 2022. We considered within each scenario our expectations for the impact of customer accommodation activity, as well as the estimated impact on certain industries that we consider to be directly and most adversely affected by the COVID-19 pandemic.

In addition to quantitative estimates, we consider qualitative factors that represent risks inherent in our processes and assumptions such as economic environmental factors, modeling assumptions and performance, and other subjective factors, including industry trends and emerging risk assessments. We also considered the significant uncertainty related to the duration and severity of the economic impacts from the COVID-19 pandemic and the incremental risks to our loan portfolio.

The forecasted key economic variables used in our estimate of the ACL for loans at March 31, 2021, and December 31, 2020, are presented in Table 27.

Table 27: Forecasted Key Economic Variables

	2Q 2021	4Q 2021	2Q 2022
Blend of economic scenarios (1):			
U.S. unemployment rate (2):			
Dec 31, 2020	8.1	7.1	6.2
Mar 31, 2021	6.2	6.5	7.0
U.S. real GDP (3):			
Dec 31, 2020	5.5	4.5	4.0
Mar 31, 2021	3.0	(1.1)	(0.6)
Home price index (4):			
Dec 31, 2020	1.7	(0.2)	2.5
Mar 31, 2021	9.2	1.0	(5.2)
Commercial real estate asset prices (4):			
Dec 31, 2020	(9.2)	(9.8)	(5.3)
Mar 31, 2021	2.3	(10.0)	(11.5)

(1) Represents a weighting of the forecasted economic variable inputs based on a weighting of 50% for the base and 50% for a downside scenario at both March 31, 2021, and December 31, 2020.

(2) Quarterly average.

(3) Percent change from the preceding period, seasonally adjusted annualized rate.

(4) Percent change year over year of national average; outlook differs by geography and property type.

Future amounts of the ACL for loans will be based on a variety of factors, including loan balance changes, portfolio credit quality and mix changes, and changes in general economic conditions and expectations (including for unemployment and GDP), among other factors. We observed economic improvements in first quarter 2021; however, there remained significant uncertainty related to the length and severity of the economic impact of the COVID-19 pandemic and the impact of other factors that may influence the level of eventual losses and corresponding requirements for future amounts of the ACL, including the impact of economic stimulus programs and customer accommodation activity. The COVID-19 pandemic could continue to impact the recognition of credit losses in our loan portfolios and may result in increases in our ACL, particularly if the impact on the economy worsens.

We believe the ACL for loans of \$18.0 billion at March 31, 2021, was appropriate to cover expected credit losses, including unfunded credit commitments, at that date. The entire allowance is available to absorb credit losses from the total loan portfolio. The ACL for loans is subject to change and reflects existing factors as of the date of determination, including economic or market conditions and ongoing internal and external examination processes. Due to the sensitivity of the ACL for loans to changes in the economic and business environment, it is possible that we will incur incremental credit losses not anticipated as of the balance sheet date. Our process for determining the ACL is discussed in the “Critical Accounting Policies – Allowance for Credit Losses” section and Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

LIABILITY FOR MORTGAGE LOAN REPURCHASE LOSSES For information on our repurchase liability, see the “Risk Management – Credit Risk Management – Liability For Mortgage Loan Repurchase Losses” section in our 2020 Form 10-K.

RISKS RELATING TO SERVICING ACTIVITIES In addition to servicing loans in our portfolio, we act as servicer and/or master servicer of residential mortgage loans included in GSE-guaranteed mortgage securitizations, GNMA-guaranteed mortgage securitizations of FHA-insured/VA-guaranteed mortgages and

private label mortgage securitizations, as well as for unsecuritized loans owned by institutional investors.

As a servicer, we are required to advance certain delinquent payments of principal and interest on mortgage loans we service. The amount and timing of reimbursement of advances of delinquent payments vary by investor and the applicable servicing agreements. Due to continued customer requests for payment deferrals as a result of the COVID-19 pandemic, the amount of our servicing advances of principal and interest remained elevated. The amount of these advances may continue to increase if additional payment deferrals are provided. Payment deferrals also delay the collection of contractually specified servicing fees, resulting in lower net servicing income.

Upon transfer as servicer, we retain the option to repurchase loans from GNMA loan securitization pools, which becomes exercisable when three scheduled loan payments remain unpaid by the borrower. We generally repurchase these loans for cash and as a result, our total consolidated assets do not change. As a result of the COVID-19 pandemic, our repurchases of these loans were elevated in 2020 but returned to more normalized levels in first quarter 2021.

Repurchased loans that regain current status or are otherwise modified in accordance with applicable servicing guidelines may be included in future GNMA loan securitization pools. However, in accordance with guidance issued by GNMA, certain loans repurchased after June 30, 2020, are ineligible for inclusion in future GNMA loan securitization pools until the borrower has timely made six consecutive payments. This requirement may delay our ability to resell loans into the securitization market.

For additional information about the risks related to our servicing activities, see the “Risk Management – Credit Risk Management – Risks Relating to Servicing Activities” section in our 2020 Form 10-K. For additional information on mortgage banking activities, see Note 9 (Mortgage Banking Activities) to Financial Statements in this Report.

Asset/Liability Management

Asset/liability management involves evaluating, monitoring and managing interest rate risk, market risk, liquidity and funding. For information on our oversight of asset/liability risks, see the “Risk Management – Asset/Liability Management” section in our 2020 Form 10-K.

INTEREST RATE RISK Interest rate risk is created in our role as a financial intermediary for customers based on investments such as loans and other extensions of credit and debt securities. Interest rate risk can have a significant impact to our earnings. We are subject to interest rate risk because:

- assets and liabilities may mature or reprice at different times. If assets reprice faster than liabilities and interest rates are generally rising, earnings will initially increase;
- assets and liabilities may reprice at the same time but by different amounts;
- short-term and long-term market interest rates may change by different amounts. For example, the shape of the yield curve may affect yield for new loans and funding costs differently;
- the remaining maturity for various assets or liabilities may shorten or lengthen as interest rates change. For example, if long-term mortgage interest rates increase sharply, MBS held in the debt securities portfolio may pay down at a slower rate than anticipated, which could impact portfolio income; or

Risk Management – Asset/Liability Management (continued)

- interest rates may have a direct or indirect effect on loan demand, collateral values, credit losses, mortgage origination volume, and the fair value of MSRs and other financial instruments.

Currently, our profile is such that we project net interest income will benefit from higher interest rates as our assets would reprice faster and to a greater degree than our liabilities, while in the case of lower interest rates, our assets would reprice downward and to a greater degree than our liabilities resulting in lower net interest income.

We assess interest rate risk by comparing outcomes under various net interest income simulations using many interest rate scenarios that differ in the direction of interest rate changes, the degree of change over time, the speed of change and the projected shape of the yield curve. These simulations require assumptions regarding drivers of earnings and balance sheet composition such as loan originations, prepayment speeds on loans and debt securities, deposit flows and mix, as well as pricing strategies.

Our most recent simulations, as presented in Table 28, estimate net interest income sensitivity over the next 12 months using instantaneous movements across the yield curve with both lower and higher interest rates relative to our base scenario. Steeper and flatter scenarios measure non-parallel changes in the yield curve, with long-term interest rates defined as all tenors three years and longer (e.g., 10-year U.S. Treasury securities) and short-term interest rates defined as all tenors less than three years. Where applicable, U.S. dollar interest rates are floored at 0.00%. The following describes the simulation assumptions for the scenarios presented in Table 28:

- Simulations are dynamic and reflect anticipated changes to our assets and liabilities.
- Other macroeconomic variables that could be correlated with the changes in interest rates are held constant.
- Mortgage prepayment and origination assumptions vary across scenarios and reflect only the impact of the higher or lower interest rates.
- Our base scenario deposit forecast incorporates mix changes consistent with the base interest rate trajectory. Deposit mix is modeled to be the same as in the base scenario across the alternative scenarios. In higher interest rate scenarios, customer activity that shifts balances into higher-yielding products could reduce expected net interest income.
- We hold the size of the projected debt and equity securities portfolios constant across scenarios.

Table 28: Net Interest Income Sensitivity

(\$ in billions)	Mar 31, 2021	Dec 31, 2020
Parallel Shift:		
+100 bps shift in interest rates	\$ 6.8	6.7
-100 bps shift in interest rates	(3.0)	(2.7)
Steeper yield curve:		
+50 bps shift in long-term interest rates	1.2	1.3
Flatter yield curve:		
+50 bps shift in short-term interest rates	2.4	2.2
-50 bps shift in long-term interest rates	(1.3)	(1.4)

The sensitivity results above do not capture noninterest income or expense impacts. Our interest rate sensitive noninterest income and expense are predominantly driven by mortgage banking activities, and may move in the opposite direction of our net interest income. See the “Risk Management

– Asset/Liability Management – Mortgage Banking Interest Rate and Market Risk” section in our 2020 Form 10-K for additional information. For additional information on our trading assets and liabilities, see Note 2 (Trading Activities) to Financial Statements in this Report.

We use the debt securities portfolio and exchange-traded and over-the-counter (OTC) interest rate derivatives to manage our interest rate exposures. See Note 1 (Summary of Significant Accounting Policies), Note 3 (Available-for-Sale and Held-to-Maturity Debt Securities) and Note 14 (Derivatives) to Financial Statements in our 2020 Form 10-K for additional information.

MORTGAGE BANKING INTEREST RATE AND MARKET RISK We originate, fund and service mortgage loans, which subjects us to various risks, including credit, liquidity and interest rate risks. For additional information on mortgage banking interest rate and market risk, see Note 9 (Mortgage Banking Activities) to Financial Statements in this Report and the “Risk Management – Asset/Liability Management – Mortgage Banking Interest Rate and Market Risk” section in our 2020 Form 10-K.

Hedging the various sources of interest rate risk in mortgage banking is a complex process that requires sophisticated modeling and constant monitoring. There are several potential risks to earnings from mortgage banking related to origination volumes and mix, valuation of MSRs and associated hedging results, the relationship and degree of volatility between short-term and long-term interest rates, and changes in servicing and foreclosures costs. While we attempt to balance our mortgage banking interest rate and market risks, the financial instruments we use may not perfectly correlate with the values and income being hedged.

MARKET RISK Market risk is the risk of possible economic loss from adverse changes in market risk factors such as interest rates, credit spreads, foreign exchange rates, equity and commodity prices, and the risk of possible loss due to counterparty exposure. This applies to implied volatility risk, basis risk, and market liquidity risk. It also includes price risk in the trading book, mortgage servicing rights and the hedge effectiveness risk associated with the mortgage book, and impairment on private equity investments. For information on our oversight of market risk, see the “Risk Management – Asset/Liability Management – Market Risk” section in our 2020 Form 10-K.

MARKET RISK – TRADING ACTIVITIES We engage in trading activities to accommodate the investment and risk management activities of our customers and to execute economic hedging to manage certain balance sheet risks. These trading activities predominantly occur within our CIB businesses and to a lesser extent other businesses of the Company. Debt securities held for trading, equity securities held for trading, trading loans and trading derivatives are financial instruments used in our trading activities, and all are carried at fair value. Income earned on the financial instruments used in our trading activities include net interest income, changes in fair value and realized gains and losses. Net interest income earned from our trading activities is reflected in the interest income and interest expense components of our consolidated statement of income. Changes in fair value of the financial instruments used in our trading activities are reflected in net gains from trading activities. For additional information on the financial instruments used in our trading activities and the income from these trading activities, see Note 2 (Trading Activities) to Financial Statements in this Report.

Value-at-risk (VaR) is a statistical risk measure used to estimate the potential loss from adverse moves in the financial markets. The Company uses VaR metrics complemented with sensitivity analysis and stress testing in measuring and monitoring market risk. For additional information on our monitoring activities, sensitivity analysis and stress testing, see the “Risk Management – Asset/Liability Management – Market Risk – Trading Activities” section in our 2020 Form 10-K.

Trading VaR is the measure used to provide insight into the market risk exhibited by the Company’s trading positions. The Company calculates Trading VaR for risk management purposes to establish line of business and Company-wide risk limits.

Trading VaR is calculated based on all trading positions on our consolidated balance sheet.

Table 29 shows the Company’s Trading General VaR by risk category. The increase in average Company Trading General VaR for the quarter ended March 31, 2021, compared with the same period a year ago, was driven by a greater presence of market volatility in the 12-month historical lookback window used to calculate average Company Trading General VaR for the quarter ended March 31, 2021. Market volatility was driven by the COVID-19 pandemic, in particular, changes in interest rate curves and a significant widening of credit spreads.

Table 29: Trading 1-Day 99% General VaR by Risk Category

(in millions)	March 31, 2021				December 31, 2020				Quarter ended March 31, 2020			
	Period end	Average	Low	High	Period end	Average	Low	High	Period end	Average	Low	High
	Company Trading General VaR Risk Categories											
Credit	\$ 22	94	21	112	106	96	80	121	62	28	15	75
Interest rate	36	73	26	120	81	122	81	241	84	32	5	198
Equity	35	36	28	72	32	21	14	35	6	7	4	10
Commodity	11	5	2	12	3	4	2	6	2	2	1	6
Foreign exchange	1	1	1	1	1	1	1	1	2	1	1	6
Diversification benefit (1)	(64)	(111)			(126)	(93)			(63)	(37)		
Company Trading General VaR	\$ 41	98			97	151			93	33		

(1) The period-end VaR was less than the sum of the VaR components described above, which is due to portfolio diversification. The diversification effect arises because the risks are not perfectly correlated causing a portfolio of positions to usually be less risky than the sum of the risks of the positions alone. The diversification benefit is not meaningful for low and high metrics since they may occur on different days.

MARKET RISK – EQUITY SECURITIES We are directly and indirectly affected by changes in the equity markets. We make and manage direct investments in start-up businesses, emerging growth companies, management buy-outs, acquisitions and corporate recapitalizations. We also invest in non-affiliated funds that make similar private equity investments. For additional information, see the “Risk Management – Asset/Liability Management – Market Risk – Equity Securities” section in our 2020 Form 10-K.

We also have marketable equity securities that include investments relating to our venture capital activities. The fair value changes in these marketable equity securities are recognized in net income. For additional information, see Note 6 (Equity Securities) to Financial Statements in this Report.

Changes in equity market prices may also indirectly affect our net income by (1) the value of third-party assets under management and, hence, fee income, (2) borrowers whose ability to repay principal and/or interest may be affected by the stock market, or (3) brokerage activity, related commission income and other business activities. Each business line monitors and manages these indirect risks.

LIQUIDITY RISK AND FUNDING In the ordinary course of business, we enter into contractual obligations that may require future cash payments, including funding for customer loan requests, customer deposit maturities and withdrawals, debt service, leases for premises and equipment, and other cash commitments. The objective of effective liquidity management is to ensure that we can meet our contractual obligations and other cash commitments efficiently under both normal operating conditions and under periods of Wells Fargo-specific and/or market stress. To help achieve this objective, we monitor both the consolidated company and the Parent on a stand-alone basis to ensure that the Parent is a source of strength for its regulated,

deposit-taking banking subsidiaries. The Parent acts as a source of funding for the Company through the issuance of long-term debt and equity, and WFC Holdings, LLC, an intermediate holding company and subsidiary of the Parent (the “IHC”), provides funding support for the ongoing operational requirements of the Parent and certain of its direct and indirect subsidiaries. For additional information on liquidity risk and funding management, see the “Risk Management – Liquidity Risk and Funding” section in our 2020 Form 10-K. For additional information on the IHC, see the “Regulatory Matters – ‘Living Will’ Requirements and Related Matters” section in our 2020 Form 10-K.

Liquidity Standards We are subject to a rule, issued by the FRB, OCC and FDIC, that establishes a quantitative minimum liquidity requirement consistent with the liquidity coverage ratio (LCR) established by the Basel Committee on Banking Supervision (BCBS). The rule requires a covered banking organization, such as Wells Fargo, to hold high-quality liquid assets (HQLA), predominantly consisting of central bank deposits, government debt securities, and mortgage-backed securities of federal agencies that can be converted easily and quickly into cash, in an amount equal to or greater than its projected net cash outflows during a 30-day stress period. The LCR applies to the Company on a consolidated basis and to our insured depository institutions (IDIs) with total assets of \$10 billion or more. In addition, rules issued by the FRB impose enhanced liquidity risk management standards on large BHCs, such as Wells Fargo.

The FRB, OCC and FDIC have also issued a rule implementing a stable funding requirement, known as the net stable funding ratio (NSFR), which requires a covered banking organization, such as Wells Fargo, to maintain a minimum amount of stable funding, including common equity, long-term debt and most types of deposits, in relation to its assets, derivative exposures and commitments over a one-year horizon period. The NSFR will

Risk Management – Asset/Liability Management (continued)

become effective on July 1, 2021, and applies to the Company on a consolidated basis and to our IDIs with total assets of \$10 billion or more. Based on our liquidity profile at March 31, 2021, we expect to be compliant with the NSFR requirement.

Liquidity Coverage Ratio As of March 31, 2021, the consolidated Company, Wells Fargo Bank, N.A., and Wells Fargo

National Bank West exceeded the minimum LCR requirement of 100%, which is calculated as HQLA divided by projected net cash outflows, as each is defined under the LCR rule. Table 30 presents the Company's quarterly average values for the daily-calculated LCR and its components calculated pursuant to the LCR rule requirements.

Table 30: Liquidity Coverage Ratio

(in millions, except ratio)	Average for Quarter ended		
	Mar 31, 2021	Dec 31, 2020	Mar 31, 2020
HQLA (1):			
Eligible cash	\$ 216,403	213,937	118,758
Eligible securities (2)	186,270	201,060	263,192
Total HQLA	402,673	414,997	381,950
Projected net cash outflows	316,116	312,697	315,980
LCR	127%	133	121

(1) Excludes excess HQLA at certain subsidiaries that is not transferable to other Wells Fargo entities.

(2) Net of applicable haircuts required under the LCR rule.

Liquidity Sources We maintain liquidity in the form of cash, cash equivalents and unencumbered high-quality, liquid debt securities. These assets make up our primary sources of liquidity. Our primary sources of liquidity are substantially the same in composition as HQLA under the LCR rule; however, our primary sources of liquidity will generally exceed HQLA calculated under the LCR rule due to the applicable haircuts to HQLA and the exclusion of excess HQLA at our subsidiary IDIs required under the LCR rule. Our primary sources of liquidity are presented in Table 31, which also includes encumbered securities that are not included as available HQLA in the calculation of the LCR.

Our cash is predominantly on deposit with the Federal Reserve. Debt securities included as part of our primary sources of liquidity are comprised of U.S. Treasury and federal agency debt, and MBS issued by federal agencies within our debt securities portfolio. We believe these debt securities provide quick sources of liquidity through sales or by pledging to obtain financing, regardless of market conditions. Some of these debt securities are within our HTM portfolio and, as such, are not intended for sale but may be pledged to obtain financing.

Table 31: Primary Sources of Liquidity

(in millions)	March 31, 2021			December 31, 2020		
	Total	Encumbered	Unencumbered	Total	Encumbered	Unencumbered
Interest-earning deposits with banks	\$ 258,394	—	258,394	236,376	—	236,376
Debt securities of U.S. Treasury and federal agencies	65,811	3,576	62,235	70,756	5,370	65,386
Mortgage-backed securities of federal agencies (1)	262,835	46,145	216,690	258,668	49,156	209,512
Total	\$ 587,040	49,721	537,319	565,800	54,526	511,274

(1) Included in encumbered securities at March 31, 2021, were securities with a fair value of \$422 million, which were purchased in March 2021, but settled in April 2021.

In addition to our primary sources of liquidity shown in Table 31, liquidity is also available through the sale or financing of other debt securities including trading and/or AFS debt securities, as well as through the sale, securitization or financing of loans, to the extent such debt securities and loans are not encumbered. As of March 31, 2021, we also maintained approximately \$227.3 billion of available borrowing capacity at various Federal Home Loan Banks and the Federal Reserve Discount Window.

Deposits have historically provided a sizable source of relatively low-cost funds. Deposits were 167% and 158% of total loans at March 31, 2021, and December 31, 2020, respectively. Additional funding is provided by long-term debt and short-term borrowings. Table 32 shows selected information for short-term borrowings, which generally mature in less than 30 days. We pledge certain financial instruments that we own to collateralize repurchase agreements and other securities financings. For additional information, see the “Pledged Assets” section of Note 12 (Pledged Assets and Collateral) to Financial Statements in this Report.

Table 32: Short-Term Borrowings

(in millions)	Quarter ended				
	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020	Mar 31, 2020
Balance, period end					
Federal funds purchased and securities sold under agreements to repurchase	\$ 46,871	46,362	44,055	49,659	79,036
Other short-term borrowings	12,049	12,637	11,169	10,826	13,253
Total	\$ 58,920	58,999	55,224	60,485	92,289
Average daily balance for period					
Federal funds purchased and securities sold under agreements to repurchase	\$ 47,358	46,069	46,504	52,868	90,722
Other short-term borrowings	11,724	11,235	10,788	10,667	12,255
Total	\$ 59,082	57,304	57,292	63,535	102,977
Maximum month-end balance for period					
Federal funds purchased and securities sold under agreements to repurchase (1)	\$ 47,050	46,879	49,148	50,397	91,121
Other short-term borrowings (2)	12,049	12,637	11,169	11,220	13,253

- (1) Highest month-end balance in each of the last five quarters was in February 2021, and November, July, April and February 2020.
(2) Highest month-end balance in each of the last five quarters was in March 2021, and December, September, April and March 2020.

Risk Management – Asset/Liability Management (continued)

Long-Term Debt We access domestic and international capital markets for long-term funding (generally greater than one year) through issuances of registered debt securities, private placements and asset-backed secured funding. We issue long-term debt in a variety of maturities and currencies to achieve cost-efficient funding and to maintain an appropriate maturity profile. Proceeds from securities issued were used for general corporate purposes, and, unless otherwise specified in the applicable prospectus or prospectus supplement, we expect the

proceeds from securities issued in the future will be used for the same purposes. Depending on market conditions, we may purchase our outstanding debt securities from time to time in privately negotiated or open market transactions, by tender offer, or otherwise. We issued \$110 million of long-term debt in first quarter 2021. Table 33 provides the aggregate carrying value of long-term debt maturities (based on contractual payment dates) for the remainder of 2021 and the following years thereafter, as of March 31, 2021.

Table 33: Maturity of Long-Term Debt

(in millions)	March 31, 2021						
	Remaining 2021	2022	2023	2024	2025	Thereafter	Total

Credit Ratings Investors in the long-term capital markets, as well as other market participants, generally will consider, among other factors, a company's debt rating in making investment decisions. Rating agencies base their ratings on many quantitative and qualitative factors, including capital adequacy, liquidity, asset quality, business mix, the level and quality of earnings, and rating agency assumptions regarding the probability and extent of federal financial assistance or support for certain large financial institutions. Adverse changes in these factors could result in a reduction of our credit rating; however, our debt securities do not contain credit rating covenants.

There were no actions undertaken by the rating agencies with regard to our credit ratings during first quarter 2021.

See the "Risk Factors" section in our 2020 Form 10-K for additional information regarding our credit ratings and the potential impact a credit rating downgrade would have on our liquidity and operations, as well as Note 14 (Derivatives) to Financial Statements in this Report for information regarding additional collateral and funding obligations required for certain derivative instruments in the event our credit ratings were to fall below investment grade.

The credit ratings of the Parent and Wells Fargo Bank, N.A., as of March 31, 2021, are presented in Table 34.

Table 34: Credit Ratings as of March 31, 2021

	Wells Fargo & Company		Wells Fargo Bank, N.A.	
	Senior debt	Short-term borrowings	Long-term deposits	Short-term borrowings
Moody's	A2	P-1	Aa1	P-1
S&P Global Ratings	BBB+	A-2	A+	A-1
Fitch Ratings, Inc.	A+	F1	AA	F1+
DBRS Morningstar	AA (low)	R-1 (middle)	AA	R-1 (high)

FEDERAL HOME LOAN BANK MEMBERSHIP The Federal Home Loan Banks (the FHLBs) are a group of cooperatives that lending institutions use to finance housing and economic development in local communities. We are a member of the FHLBs based in Dallas, Des Moines and San Francisco. FHLB members are required to maintain a minimum investment in capital stock of the applicable FHLB. The board of directors of each FHLB can

increase the minimum investment requirements in the event it has concluded that additional capital is required to allow it to meet its own regulatory capital requirements. Any increase in the minimum investment requirements outside of specified ranges requires the approval of the Federal Housing Finance Agency. Because the extent of any obligation to increase our investment in any of the FHLBs depends entirely upon the occurrence of a

future event, the amount of any future investment in the capital stock of the FHLBs is not determinable.

Capital Management

We have an active program for managing capital through a comprehensive process for assessing the Company's overall capital adequacy. Our objective is to maintain capital at an amount commensurate with our risk profile and risk tolerance objectives, and to meet both regulatory and market expectations. We primarily fund our capital needs through the retention of earnings net of both dividends and share repurchases, as well as through the issuance of preferred stock and long- and short-term debt. Retained earnings at March 31, 2021, increased \$3.9 billion from December 31, 2020, predominantly as a result of \$4.7 billion of Wells Fargo net income, partially offset by \$755 million of common and preferred stock dividends. During first quarter 2021, we issued \$724 million of common stock, substantially all of which was issued in connection with employee compensation and benefits, excluding conversions of preferred shares. During first quarter 2021, we repurchased 17 million shares of common stock at a cost of \$596 million. For additional information about capital planning, including the FRB's recent announcement on capital distributions, see the "Capital Planning and Stress Testing" section below.

In first quarter 2021, we issued \$4.6 billion of preferred stock and redeemed \$4.5 billion of preferred stock. For additional information, see Note 16 (Preferred Stock) to Financial Statements in this Report.

Regulatory Capital Requirements

The Company and each of our IDIs are subject to various regulatory capital adequacy requirements administered by the FRB and the OCC. Risk-based capital rules establish risk-adjusted ratios relating regulatory capital to different categories of assets and off-balance sheet exposures as discussed below.

RISK-BASED CAPITAL AND RISK-WEIGHTED ASSETS The Company is subject to rules issued by federal banking regulators to implement Basel III capital requirements for U.S. banking organizations. The rules contain two frameworks for calculating capital requirements, a Standardized Approach and an Advanced Approach applicable to certain institutions, including Wells Fargo. Our capital adequacy is assessed based on the lower of our risk-based capital ratios calculated under the two approaches. The Company is required to satisfy the risk-based capital ratio requirements to avoid restrictions on capital distributions and discretionary bonus payments. Table 35 and Table 36 present the risk-based capital requirements applicable to the Company on a fully phased-in basis under the Standardized Approach and Advanced Approach, respectively, as of March 31, 2021.

Table 35: Risk-Based Capital Requirements – Standardized Approach

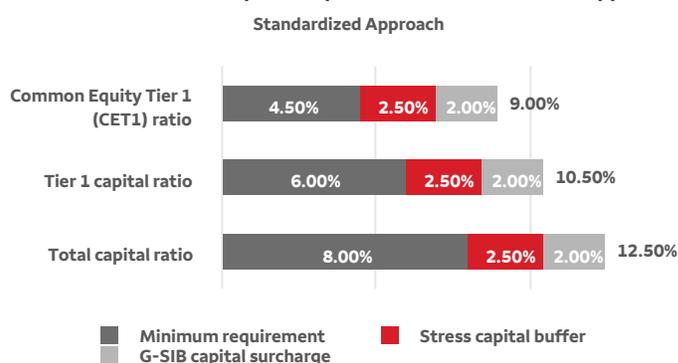

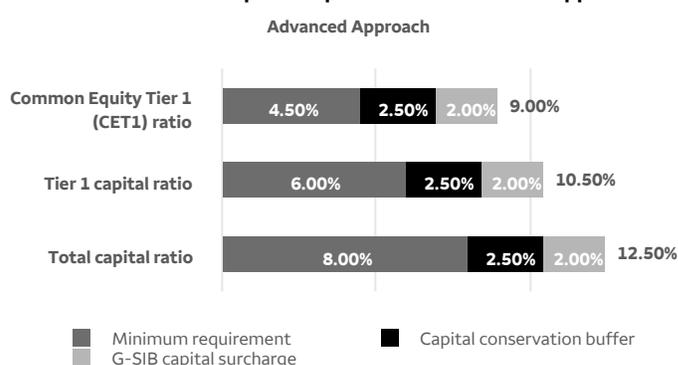

Table 36: Risk-Based Capital Requirements – Advanced Approach

In addition to the risk-based capital requirements described in Table 35 and Table 36, if the FRB determines that a period of excessive credit growth is contributing to an increase in systemic risk, a countercyclical buffer of up to 2.50% could be added to the risk-based capital ratio requirements under federal banking regulations.

The capital conservation buffer is applicable to certain institutions, including Wells Fargo, under the Advanced Approach and is intended to absorb losses during times of economic or financial stress.

The stress capital buffer is calculated based on the decrease in a BHC's risk-based capital ratios under the severely adverse scenario in the FRB's annual supervisory stress test and related Comprehensive Capital Analysis and Review (CCAR), plus four quarters of planned common stock dividends. Because the stress capital buffer is calculated annually based on data that can differ over time, our stress capital buffer, and thus our risk-based capital ratio requirements under the Standardized Approach, are subject to change in future periods. The Company's stress capital buffer for the period October 1, 2020, through September 30, 2021, is 2.50%.

Capital Management (continued)

As a global systemically important bank (G-SIB), we are also subject to the FRB's rule implementing an additional capital surcharge of between 1.00-4.50% on the risk-based capital ratio requirements of G-SIBs. Under the rule, we must annually calculate our surcharge under two methods and use the higher of the two surcharges. The first method (method one) considers our size, interconnectedness, cross-jurisdictional activity, substitutability, and complexity, consistent with the methodology developed by the BCBS and the Financial Stability Board (FSB). The second method (method two) uses similar inputs, but replaces substitutability with use of short-term wholesale funding and will generally result in higher surcharges than under method one. Because the G-SIB capital surcharge is calculated annually based on data that can differ over time, the amount of the surcharge is subject to change in future years.

The Basel III capital requirements for calculating CET1 and tier 1 capital, along with risk-weighted assets (RWAs), are fully phased-in. However, the requirements for determining tier 2 and total capital are still in accordance with transition requirements and are scheduled to be fully phased-in by the end of 2021.

Under the risk-based capital rules, on-balance sheet assets and credit equivalent amounts of derivatives and off-balance sheet items are assigned to one of several broad risk categories according to the obligor, or, if relevant, the guarantor or the

nature of any collateral. The aggregate dollar amount in each risk category is then multiplied by the risk weight associated with that category. The resulting weighted values from each of the risk categories are aggregated for determining total RWAs.

The tables that follow provide information about our risk-based capital and related ratios as calculated under Basel III capital rules. Although we report certain capital amounts and ratios in accordance with transition requirements for bank regulatory reporting purposes, we manage our capital on a fully phased-in basis. For information about our capital requirements calculated in accordance with transition requirements, see Note 23 (Regulatory Capital Requirements and Other Restrictions) to Financial Statements in this Report.

Table 37 summarizes our CET1, tier 1 capital, total capital, RWAs and capital ratios on a fully phased-in basis at March 31, 2021, and December 31, 2020. Fully phased-in total capital amounts and ratios are considered non-GAAP financial measures that are used by management, bank regulatory agencies, investors and analysts to assess and monitor the Company's capital position. See Table 38 for information regarding the calculation and components of our CET1, tier 1 capital, total capital and RWAs, as well as a corresponding reconciliation to GAAP financial measures for our fully phased-in total capital amounts.

Table 37: Capital Components and Ratios (Fully Phased-In)

(in millions, except ratios)		Required Capital Ratios (1)	March 31, 2021		December 31, 2020	
			Advanced Approach	Standardized Approach	Advanced Approach	Standardized Approach
Common Equity Tier 1	(A)		\$ 139,724	139,724	138,297	138,297
Tier 1 Capital	(B)		159,675	159,675	158,196	158,196
Total Capital	(C)		187,585	197,467	186,803	196,529
Risk-Weighted Assets	(D)		1,109,354	1,178,996	1,158,355	1,193,744
Common Equity Tier 1 Capital Ratio	(A)/(D)	9.00 %	12.60	11.85 *	11.94	11.59 *
Tier 1 Capital Ratio	(B)/(D)	10.50	14.39	13.54 *	13.66	13.25 *
Total Capital Ratio	(C)/(D)	12.50	16.91	16.75 *	16.13 *	16.46

* Denotes the binding ratio based on the lower calculation under the Advanced and Standardized Approaches.

(1) Represents the minimum ratios required to avoid restrictions on capital distributions and discretionary bonus payments. The required ratios were the same under both the Standardized and Advanced Approaches at March 31, 2021.

Table 38 provides information regarding the calculation and composition of our risk-based capital under the Advanced and Standardized Approaches at March 31, 2021, and December 31, 2020.

Table 38: Risk-Based Capital Calculation and Components

Total qualifying capital (Basel III Transition Requirements)	\$ 187,651	197,533	186,934	196,660
Risk-Weighted Assets (RWAs) (4):				
Credit risk (5)	\$ 717,744	1,126,536	752,999	1,125,813
Market risk	52,460	52,460	67,931	67,931
Operational risk	339,150	—	337,425	—
Total RWAs	\$ 1,109,354	1,178,996	1,158,355	1,193,744

- (1) Determined by applying the combined federal statutory rate and composite state income tax rates to the difference between book and tax basis of the respective goodwill and intangible assets at period end.
- (2) At March 31, 2021, the impact of the CECL transition provision issued by federal banking regulators on our regulatory capital was an increase in capital of \$1.3 billion, reflecting a \$991 million (post-tax) increase in capital recognized upon our initial adoption of CECL, offset by 25% of the \$9.2 billion increase in our ACL under CECL from January 1, 2020, through March 31, 2021.
- (3) Under the Advanced Approach the allowance for credit losses that exceeds expected credit losses is eligible for inclusion in tier 2 capital, to the extent the excess allowance does not exceed 0.60% of Advanced credit RWAs, and under the Standardized Approach, the allowance for credit losses is includable in tier 2 capital up to 1.25% of Standardized credit RWAs, in each case with any excess allowance for credit losses being deducted from the respective total RWAs.
- (4) RWAs calculated under the Advanced Approach utilize a risk-sensitive methodology, which relies upon the use of internal credit models based upon our experience with internal rating grades. Advanced Approach also includes an operational risk component, which reflects the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events.
- (5) Includes an increase of \$1.0 billion under the Standardized Approach and a decrease of \$1.4 billion under the Advanced Approach related to the impact of the CECL transition provision on our excess allowance for credit losses as of March 31, 2021. See footnote (3) to this table.

Capital Management (continued)

Table 39 presents the changes in CET1 under the Advanced Approach for the three months ended March 31, 2021.

Table 39: Analysis of Changes in Common Equity Tier 1 (Advanced Approach)

Net change in operational risk RWAs	1,725	—
Total change in RWAs	(49,001)	(14,748)
RWAs at March 31, 2021	\$ 1,109,354	1,178,996

- (1) Includes an increase of \$1.0 billion under the Standardized Approach and a decrease of \$1.4 billion under the Advanced Approach related to the impact of the CECL transition provision on our excess allowance for credit losses. See Table 38 for additional information.

TANGIBLE COMMON EQUITY We also evaluate our business based on certain ratios that utilize tangible common equity. Tangible common equity is a non-GAAP financial measure and represents total equity less preferred equity, noncontrolling interests, goodwill, certain identifiable intangible assets (other than MSRs) and goodwill and other intangibles on nonmarketable equity securities, net of applicable deferred taxes. The ratios are (i) tangible book value per common share, which represents tangible common equity divided by common shares outstanding; and (ii) return on average tangible common equity (ROTCE),

which represents our annualized earnings as a percentage of tangible common equity. The methodology of determining tangible common equity may differ among companies. Management believes that tangible book value per common share and return on average tangible common equity, which utilize tangible common equity, are useful financial measures because they enable management, investors, and others to assess the Company's use of equity.

Table 41 provides a reconciliation of these non-GAAP financial measures to GAAP financial measures.

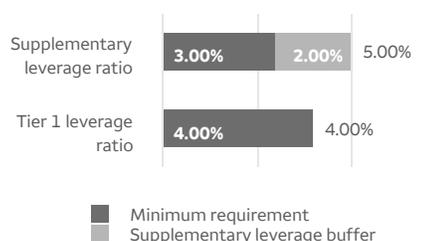

Table 41: Tangible Common Equity

(in millions, except ratios)		Balance at period end			Average balance		
		Quarter ended			Quarter ended		
		Mar 31, 2021	Dec 31, 2020	Mar 31, 2020	Mar 31, 2021	Dec 31, 2020	Mar 31, 2020
Total equity		\$ 188,348	185,920	183,330	189,332	185,748	188,170
Adjustments:							
Preferred stock		(21,170)	(21,136)	(21,347)	(21,840)	(21,223)	(21,794)

Tangible common equity	(B)	\$ 139,016	136,935	134,787	139,330	136,888	138,722
Common shares outstanding	(C)	4,141.1	4,144.0	4,096.4	N/A	N/A	N/A
Net income applicable to common stock	(D)	N/A	N/A	N/A	\$ 4,363	2,642	42
Book value per common share	(A)/(C)	\$ 40.34	39.76	39.71	N/A	N/A	N/A
Tangible book value per common share	(B)/(C)	33.57	33.04	32.90	N/A	N/A	N/A
Return on average common stockholders' equity (ROE) (annualized)	(D)/(A)	N/A	N/A	N/A	10.57 %	6.38	0.10
Return on average tangible common equity (ROTCE) (annualized)	(D)/(B)	N/A	N/A	N/A	12.70	7.68	0.12

(1) Determined by applying the combined federal statutory rate and composite state income tax rates to the difference between book and tax basis of the respective goodwill and intangible assets at period end.

LEVERAGE REQUIREMENTS As a BHC, we are required to maintain a supplementary leverage ratio (SLR) to avoid restrictions on capital distributions and discretionary bonus payments and maintain a minimum tier 1 leverage ratio. Table 42 presents the leverage requirements applicable to the Company as of March 31, 2021.

Table 42: Leverage Requirements Applicable to the Company

In addition, our IDIs are required to maintain an SLR of at least 6.00% to be considered well capitalized under applicable regulatory capital adequacy rules and maintain a minimum tier 1 leverage ratio of 4.00%.

The FRB and OCC have proposed amendments to the SLR rules. For information regarding the proposed amendments to the SLR rules, see the "Capital Management – Leverage Requirements" section in our 2020 Form 10-K.

In April 2020, the FRB issued an interim final rule that temporarily allowed a BHC to exclude on-balance sheet amounts of U.S. Treasury securities and deposits at Federal Reserve Banks from the calculation of its total leverage exposure in the denominator of the SLR. This interim final rule became effective on April 1, 2020, and expired on April 1, 2021.

At March 31, 2021, the Company's SLR was 7.91%, and each of our IDIs exceeded their applicable SLR requirements. In addition, the Company's SLR at March 31, 2021, would have been 6.97% without relying on the FRB's April 2020 interim final rule that temporarily allowed for the exclusion of specific on-balance sheet amounts. Table 43 presents information regarding the calculation and components of the Company's SLR and tier 1 leverage ratio.

Capital Management (continued)

Table 43: Leverage Ratios for the Company

(in millions, except ratio)	Quarter ended March 31, 2021	
Tier 1 capital	(A)	\$ 159,675
Total average assets		1,938,008
Less: Goodwill and other permitted Tier 1 capital deductions (net of deferred tax liabilities)		28,744
Less: Other SLR exclusions		272,860
Total adjusted average assets		1,636,404
Plus adjustments for off-balance sheet exposures:		
Derivatives (1)		66,520
Repo-style transactions (2)		3,650
Other (3)		312,815
Total off-balance sheet exposures		382,985
Total leverage exposure	(B)	\$ 2,019,389
Supplementary leverage ratio	(A)/(B)	7.91%
Tier 1 leverage ratio (4)		8.36%

- (1) Adjustment represents derivatives and collateral netting exposures as defined for supplementary leverage ratio determination purposes.
(2) Adjustment represents counterparty credit risk for repo-style transactions where Wells Fargo & Company is the principal counterparty facing the client.
(3) Adjustment represents credit equivalent amounts of other off-balance sheet exposures not already included as derivatives and repo-style transactions exposures.
(4) The tier 1 leverage ratio consists of tier 1 capital divided by total average assets, excluding goodwill and certain other items as determined under the rule.

TOTAL LOSS ABSORBING CAPACITY As a G-SIB, we are required to have a minimum amount of equity and unsecured long-term debt for purposes of resolvability and resiliency, often referred to as Total Loss Absorbing Capacity (TLAC). U.S. G-SIBs are required to have a minimum amount of TLAC (consisting of CET1 capital and additional tier 1 capital issued directly by the top-tier or covered BHC plus eligible external long-term debt) to avoid restrictions on capital distributions and discretionary bonus payments, as well as a minimum amount of eligible unsecured long-term debt. Our minimum TLAC and eligible unsecured long-term debt requirements as of March 31, 2021, are presented in Table 44.

Table 44: TLAC and Eligible Unsecured Long-Term Debt Requirements

TLAC requirement	
Greater of:	
18.00% of RWAs + TLAC buffer (equal to 2.50% of RWAs + method one G-SIB capital surcharge + any countercyclical buffer)	7.50% of total leverage exposure (the denominator of the SLR calculation) + External TLAC leverage buffer (equal to 2.00% of total leverage exposure)
Minimum amount of eligible unsecured long-term debt	
Greater of:	
6.00% of RWAs + Method two G-SIB capital surcharge	4.50% of total leverage exposure

The FRB and OCC have proposed amendments to the TLAC and eligible unsecured long-term debt requirements. For information regarding these proposed amendments, see the “Capital Management – Total Loss Absorbing Capacity” section in our 2020 Form 10-K.

As of March 31, 2021, our eligible external TLAC as a percentage of total RWAs was 25.18%, compared with a required minimum of 21.50%. Similar to the risk-based capital

requirements, our minimum TLAC requirement is assessed based on the greater of RWAs determined under the Standardized and Advanced Approaches.

OTHER REGULATORY CAPITAL AND LIQUIDITY MATTERS For information regarding the U.S. implementation of the Basel III LCR and NSFR, see the “Risk Management – Asset/ Liability Management – Liquidity Risk and Funding – Liquidity Standards” section in this Report.

Capital Planning and Stress Testing

Our planned long-term capital structure is designed to meet regulatory and market expectations. We believe that our long-term targeted capital structure enables us to invest in and grow our business, satisfy our customers’ financial needs in varying environments, access markets, and maintain flexibility to return capital to our shareholders. Our long-term targeted capital structure also considers capital levels sufficient to exceed capital requirements including the G-SIB capital surcharge. Accordingly, we currently target a long-term CET1 capital ratio at or in excess of 10.00%. Our capital targets are subject to change based on various factors, including changes to the regulatory capital framework and expectations for large banks promulgated by bank regulatory agencies, changes to the regulatory requirements for our capital ratios, planned capital actions, changes in our risk profile and other factors.

The FRB capital plan rule establishes capital planning and other requirements that govern capital distributions, including dividends and share repurchases, by certain BHCs, including Wells Fargo. The FRB assesses, among other things, the overall financial condition, risk profile, and capital adequacy of BHCs when evaluating their capital plans.

We submitted our 2021 capital plan to the FRB on April 5, 2021. As part of the 2021 CCAR, the FRB also generated a supervisory stress test. The FRB is expected to review the supervisory stress test results as required under the Dodd-Frank Act using a common set of capital actions for all large BHCs and is also expected to review the Company’s proposed capital actions. The FRB has indicated it will publish its supervisory stress test results by July 1, 2021.

On March 25, 2021, the FRB announced that it was extending measures it previously announced limiting large BHCs, including Wells Fargo, from making any capital distribution (excluding any capital distribution arising from the issuance of a capital instrument eligible for inclusion in the numerator of a regulatory capital ratio), unless otherwise approved by the FRB. The FRB has generally authorized BHCs to (i) provided that the BHC does not increase the amount of its common stock dividends to be larger than the level paid in second quarter 2020, pay common stock dividends and make share repurchases that, in the aggregate, do not exceed an amount equal to the average of the BHC’s net income for the four preceding calendar quarters; (ii) make share repurchases that equal the amount of share issuances related to expensed employee compensation; and (iii) redeem and make scheduled payments on additional tier 1 and tier 2 capital instruments. The FRB has also announced that if a BHC remains above all of its minimum risk-based capital requirements in this year’s supervisory stress test, these additional limitations on capital distributions will end for that BHC after June 30, 2021. However, a BHC that falls below any of its minimum risk-based capital requirements in this year’s supervisory stress test will remain subject to the additional limitations on capital distributions through September 30, 2021, and if the BHC remains below the capital required by the supervisory stress test at that time, the existing stress capital

buffer framework will impose even stricter capital distribution limitations.

Concurrently with CCAR, federal banking regulators also require large BHCs and banks to conduct their own stress tests to evaluate whether the institution has sufficient capital to continue to operate during periods of adverse economic and financial conditions.

Securities Repurchases

From time to time the Board authorizes the Company to repurchase shares of our common stock. Although we announce when the Board authorizes share repurchases, we typically do not give any public notice before we repurchase our shares. Various factors determine the amount of our share repurchases, including our capital requirements, the number of shares we

expect to issue for employee benefit plans and acquisitions, market conditions (including the trading price of our stock), and regulatory and legal considerations, including under the FRB's capital plan rule. Due to the various factors that may impact the amount of our share repurchases and the fact that we tend to be in the market regularly to satisfy repurchase considerations under our capital plan, our share repurchases occur at various price levels. We may suspend share repurchase activity at any time.

At March 31, 2021, we had remaining Board authority to repurchase approximately 650 million shares, subject to regulatory and legal conditions. For additional information about share repurchases during first quarter 2021, see Part II, Item 2 in this Report.

Regulatory Matters

The U.S. financial services industry is subject to significant regulation and regulatory oversight initiatives. This regulation and oversight may continue to impact how U.S. financial services companies conduct business and may continue to result in increased regulatory compliance costs.

For a discussion of certain consent orders applicable to the Company, see the "Overview" section in this Report. For a discussion of other significant regulations and regulatory oversight initiatives that have affected or may affect our business, see the "Regulatory Matters" and "Risk Factors" sections in our 2020 Form 10-K.

Critical Accounting Policies

Our significant accounting policies (see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K) are fundamental to understanding our results of operations and financial condition because they require that we use estimates and assumptions that may affect the value of our assets or liabilities and financial results. Six of these policies are critical because they require management to make difficult, subjective and complex judgments about matters that are inherently uncertain and because it is likely that materially different amounts would be reported under different conditions or using different assumptions. These policies govern:

- the allowance for credit losses;
- the valuation of residential MSRs;
- the fair value of financial instruments;
- income taxes;
- liability for contingent litigation losses; and
- goodwill impairment.

Management has discussed these critical accounting policies and the related estimates and judgments with the Board's Audit Committee. For additional information on these policies, see the "Critical Accounting Policies" section and Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

Current Accounting Developments

The following significant accounting update has been issued by the Financial Accounting Standards Board (FASB) and is applicable to us, but is not yet effective:

- ASU 2018-12 – Financial Services – Insurance (Topic 944): *Targeted Improvements to the Accounting for Long-Duration Contracts* and subsequent related updates

ASU 2018-12 See the "Current Accounting Developments" section in our 2020 Form 10-K for information on the effective date and our assessment of the expected financial statement impact upon adoption.

Other Accounting Developments

The following Update is applicable to us but is not expected to have a material impact on our consolidated financial statements:

- ASU 2020-06 – Debt – Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging – Contracts in Entity's Own Equity (Subtopic 815-40): *Accounting for Convertible Instruments and Contracts in an Entity's Own Equity*

Forward-Looking Statements

This document contains forward-looking statements. In addition, we may make forward-looking statements in our other documents filed or furnished with the Securities and Exchange Commission, and our management may make forward-looking statements orally to analysts, investors, representatives of the media and others. Forward-looking statements can be identified by words such as “anticipates,” “intends,” “plans,” “seeks,” “believes,” “estimates,” “expects,” “target,” “projects,” “outlook,” “forecast,” “will,” “may,” “could,” “should,” “can” and similar references to future periods. In particular, forward-looking statements include, but are not limited to, statements we make about: (i) the future operating or financial performance of the Company, including our outlook for future growth; (ii) our noninterest expense and efficiency ratio; (iii) future credit quality and performance, including our expectations regarding future loan losses, our allowance for credit losses, and the economic scenarios considered to develop the allowance; (iv) our expectations regarding net interest income and net interest margin; (v) loan growth or the reduction or mitigation of risk in our loan portfolios; (vi) future capital or liquidity levels, ratios or targets; (vii) the performance of our mortgage business and any related exposures; (viii) the expected outcome and impact of legal, regulatory and legislative developments, as well as our expectations regarding compliance therewith; (ix) future common stock dividends, common share repurchases and other uses of capital; (x) our targeted range for return on assets, return on equity, and return on tangible common equity; (xi) expectations regarding our effective income tax rate; (xii) the outcome of contingencies, such as legal proceedings; (xiii) environmental, social and governance related goals or commitments; and (xiv) the Company’s plans, objectives and strategies.

Forward-looking statements are not based on historical facts but instead represent our current expectations and assumptions regarding our business, the economy and other future conditions. Because forward-looking statements relate to the future, they are subject to inherent uncertainties, risks and changes in circumstances that are difficult to predict. Our actual results may differ materially from those contemplated by the forward-looking statements. We caution you, therefore, against relying on any of these forward-looking statements. They are neither statements of historical fact nor guarantees or assurances of future performance. While there is no assurance that any list of risks and uncertainties or risk factors is complete, important factors that could cause actual results to differ materially from those in the forward-looking statements include the following, without limitation:

- current and future economic and market conditions, including the effects of declines in housing prices, high unemployment rates, U.S. fiscal debt, budget and tax matters, geopolitical matters, and any slowdown in global economic growth;
- the effect of the COVID-19 pandemic, including on our credit quality and business operations, as well as its impact on general economic and financial market conditions;
- our capital and liquidity requirements (including under regulatory capital standards, such as the Basel III capital standards) and our ability to generate capital internally or raise capital on favorable terms;
- current, pending or future legislation or regulation that could have a negative effect on our revenue and businesses,

including rules and regulations relating to bank products and financial services;

- developments in our mortgage banking business, including the extent of the success of our mortgage loan modification efforts, the amount of mortgage loan repurchase demands that we receive, any negative effects relating to our mortgage servicing, loan modification or foreclosure practices, and the effects of regulatory or judicial requirements or guidance impacting our mortgage banking business and any changes in industry standards;
- our ability to realize any efficiency ratio or expense target as part of our expense management initiatives, including as a result of business and economic cyclicality, seasonality, changes in our business composition and operating environment, growth in our businesses and/or acquisitions, and unexpected expenses relating to, among other things, litigation and regulatory matters;
- the effect of the current interest rate environment or changes in interest rates or in the level or composition of our assets or liabilities on our net interest income, net interest margin and our mortgage originations, mortgage servicing rights and mortgage loans held for sale;
- significant turbulence or a disruption in the capital or financial markets, which could result in, among other things, reduced investor demand for mortgage loans, a reduction in the availability of funding or increased funding costs, and declines in asset values and/or recognition of impairments of securities held in our debt securities and equity securities portfolios;
- the effect of a fall in stock market prices on our investment banking business and our fee income from our brokerage and wealth management businesses;
- negative effects from the retail banking sales practices matter and from other instances where customers may have experienced financial harm, including on our legal, operational and compliance costs, our ability to engage in certain business activities or offer certain products or services, our ability to keep and attract customers, our ability to attract and retain qualified employees, and our reputation;
- resolution of regulatory matters, litigation, or other legal actions, which may result in, among other things, additional costs, fines, penalties, restrictions on our business activities, reputational harm, or other adverse consequences;
- a failure in or breach of our operational or security systems or infrastructure, or those of our third-party vendors or other service providers, including as a result of cyber attacks;
- the effect of changes in the level of checking or savings account deposits on our funding costs and net interest margin;
- fiscal and monetary policies of the Federal Reserve Board;
- changes to U.S. tax guidance and regulations, as well as the effect of discrete items on our effective income tax rate;
- our ability to develop and execute effective business plans and strategies; and
- the other risk factors and uncertainties described under “Risk Factors” in our Annual Report on Form 10-K for the year ended December 31, 2020.

In addition to the above factors, we also caution that the amount and timing of any future common stock dividends or repurchases will depend on the earnings, cash requirements and

financial condition of the Company, market conditions, capital requirements (including under Basel capital standards), common stock issuance requirements, applicable law and regulations (including federal securities laws and federal banking regulations), and other factors deemed relevant by the Company's Board of Directors, and may be subject to regulatory approval or conditions.

For additional information about factors that could cause actual results to differ materially from our expectations, refer to our reports filed with the Securities and Exchange Commission, including the discussion under "Risk Factors" in our Annual Report on Form 10-K for the year ended December 31, 2020, as filed with the Securities and Exchange Commission and available on its website at www.sec.gov.¹

Any forward-looking statement made by us speaks only as of the date on which it is made. Factors or events that could cause our actual results to differ may emerge from time to time, and it is not possible for us to predict all of them. We undertake no obligation to publicly update any forward-looking statement, whether as a result of new information, future developments or otherwise, except as may be required by law.

Forward-looking Non-GAAP Financial Measures. From time to time management may discuss forward-looking non-GAAP financial measures, such as forward-looking estimates or targets for return on average tangible common equity. We are unable to provide a reconciliation of forward-looking non-GAAP financial measures to their most directly comparable GAAP financial measures because we are unable to provide, without unreasonable effort, a meaningful or accurate calculation or estimation of amounts that would be necessary for the reconciliation due to the complexity and inherent difficulty in forecasting and quantifying future amounts or when they may occur. Such unavailable information could be significant to future results.

Risk Factors

An investment in the Company involves risk, including the possibility that the value of the investment could fall substantially and that dividends or other distributions on the investment could be reduced or eliminated. For a discussion of risk factors that could adversely affect our financial results and condition, and the value of, and return on, an investment in the Company, we refer you to the “Risk Factors” section in our 2020 Form 10-K.

Controls and Procedures

Disclosure Controls and Procedures

The Company's management evaluated the effectiveness, as of March 31, 2021, of the Company's disclosure controls and procedures. The Company's chief executive officer and chief financial officer participated in the evaluation. Based on this evaluation, the Company's chief executive officer and chief financial officer concluded that the Company's disclosure controls and procedures were effective as of March 31, 2021.

Internal Control Over Financial Reporting

Internal control over financial reporting is defined in Rule 13a-15(f) promulgated under the Securities Exchange Act of 1934 as a process designed by, or under the supervision of, the Company's principal executive and principal financial officers and effected by the Company's Board, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. generally accepted accounting principles (GAAP) and includes those policies and procedures that:

- pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of assets of the Company;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with GAAP, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. No change occurred during first quarter 2021 that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting.

Notes to Financial Statements

-See the Glossary of Acronyms at the end of this Report for terms used throughout the Financial Statements and related Notes.

Note 1: Summary of Significant Accounting Policies

Wells Fargo & Company is a diversified financial services company. We provide banking, investment and mortgage products and services, as well as consumer and commercial finance, through banking locations and offices, the internet and other distribution channels to individuals, businesses and institutions in all 50 states, the District of Columbia, and in countries outside the U.S. When we refer to “Wells Fargo,” “the Company,” “we,” “our” or “us,” we mean Wells Fargo & Company and Subsidiaries (consolidated). Wells Fargo & Company (the Parent) is a financial holding company and a bank holding company. We also hold a majority interest in a real estate investment trust, which has publicly traded preferred stock outstanding.

Our accounting and reporting policies conform with U.S. generally accepted accounting principles (GAAP) and practices in the financial services industry. For discussion of our significant accounting policies, see Note 1 (Summary of Significant Accounting Policies) in our Annual Report on Form 10-K for the year ended December 31, 2020 (2020 Form 10-K). There were no material changes to these policies in first quarter 2021.

To prepare the financial statements in conformity with GAAP, management must make estimates based on assumptions about future economic and market conditions (for example, unemployment, market liquidity, real estate prices, etc.) that affect the reported amounts of assets and liabilities at the date of the financial statements, income and expenses during the reporting period and the related disclosures. Although our estimates contemplate current conditions and how we expect them to change in the future, it is reasonably possible that actual conditions could be worse than anticipated in those estimates, which could materially affect our results of operations and financial condition. Management has made significant estimates in several areas, including:

- allowance for credit losses (Note 4 (Loans and Related Allowance for Credit Losses));
- valuations of residential mortgage servicing rights (MSRs) (Note 8 (Securitizations and Variable Interest Entities) and Note 9 (Mortgage Banking Activities));
- valuations of financial instruments (Note 15 (Fair Values of Assets and Liabilities));
- liabilities for contingent litigation losses (Note 13 (Legal Actions));
- income taxes; and
- goodwill impairment (Note 10 (Intangible Assets)).

Actual results could differ from those estimates.

These unaudited interim financial statements reflect all adjustments that are, in the opinion of management, necessary for a fair statement of the results for the periods presented. These adjustments are of a normal recurring nature, unless otherwise disclosed in this Form 10-Q. The results of operations in the interim financial statements do not necessarily indicate the results that may be expected for the full year. The interim financial information should be read in conjunction with our 2020 Form 10-K.

Accounting Standards Adopted in 2021

In first quarter 2021, we adopted the following new accounting guidance:

- Accounting Standards Update (ASU or Update) 2021-01 – Reference Rate Reform (Topic 848): *Scope*
- ASU 2020-08 – Codification Improvements to Subtopic 310-20, *Receivables – Nonrefundable Fees and Other Costs*
- ASU 2020-01 – Investments – Equity Securities (Topic 321), Investments – Equity Method and Joint Ventures (Topic 323), and Derivatives and Hedging (Topic 815): *Clarifying the Interactions between Topic 321, Topic 323, and Topic 815 (a consensus of the Financial Accounting Standards Board (FASB) Emerging Issues Task Force)*
- ASU 2019-12 – Income Taxes (Topic 740): *Simplifying the Accounting for Income Taxes*

ASU 2021-01 clarifies the scope of Topic 848 to include derivatives affected by changes in interest rates for margining, discounting, or contract price alignment as part of the market-wide transition to new reference rate (commonly referred to as the “discounting transition”), even if they do not reference the London Interbank Offered Rate or another rate that is expected to be discontinued as a result of reference rate reform. The guidance also clarifies other aspects of the relief provided in Accounting Standards Codification (ASC) 848. We adopted ASU 2021-01 in first quarter 2021, and the guidance will be followed until the Update terminates on December 31, 2022. This guidance is applied on a prospective basis. The Update did not have a material impact on our consolidated financial statements.

ASU 2020-08 clarifies the accounting for purchased callable debt securities carried at a premium and was issued to correct an unintended application of ASU 2017-08 – Receivables— Nonrefundable Fees and Other Costs (Subtopic 310-20): *Premium Amortization on Purchased Callable Debt Securities*, which requires amortization of such premiums to the earliest call date, but was not clear for the method to be used for instruments with multiple call dates. This Update now specifies that such premiums are amortized to the next call date and requires reassessment throughout the life of the instruments with multiple call dates. The Update did not have an impact on our consolidated financial statements, as we had interpreted the provisions of ASU 2017-08 in this manner upon our adoption in first quarter 2019.

ASU 2020-01 clarifies the accounting for equity securities upon transition between the measurement alternative and equity method. The Update also clarifies for forward contracts and options to purchase equity securities an entity need not consider whether upon settlement of the forward contract or option if the equity securities would be accounted for by the equity method or the fair value option. We adopted this Update in first quarter 2021. The Update did not have an impact on our consolidated financial statements.

ASU 2019-12 provides narrow scope simplifications and improvements to the general principles in ASC Topic 740 – Income Taxes related to intraperiod tax allocation, basis differences when there are changes in ownership of foreign investments and interim periods income tax accounting for year to date losses that exceed anticipated annual losses. The Update did not have an impact on our consolidated financial statements.

Supplemental Cash Flow Information

Significant noncash activities are presented in Table 1.1.

Table 1.1: Supplemental Cash Flow Information

(in millions)	Quarter ended March 31,	
	2021	2020
Held-to-maturity debt securities purchased from securitization of LHFS (1)	10,252	62
Transfers from loans to LHFS (2)	6,249	1,063
Transfers from available-for-sale debt securities to held-to-maturity debt securities	16,617	—

- (1) For the quarter ended March 31, 2021, predominantly represents agency mortgage-backed securities purchased upon settlement of the sale and securitization of our conforming residential mortgage loans. See Note 8 (Securitizations and Variable Interest Entities) for additional information.
- (2) Prior periods have been revised to conform to the current period presentation.

Subsequent Events

We have evaluated the effects of events that have occurred subsequent to March 31, 2021, and there have been no material events that would require recognition in our first quarter 2021 consolidated financial statements or disclosure in the Notes to the consolidated financial statements.

Note 2: Trading Activities

Table 2.1 presents a summary of our trading assets and liabilities measured at fair value through earnings.

Table 2.1: Trading Assets and Liabilities

(in millions)	Mar 31, 2021	Dec 31, 2020
Trading assets:		
Debt securities	\$ 72,784	75,095

Netting (1)	(37,269)	(39,444)
Total trading derivative liabilities	12,027	13,841
Total trading liabilities	\$ 34,760	36,282

(1) Represents balance sheet netting for trading derivative asset and liability balances, and trading portfolio level counterparty valuation adjustments.

Table 2.2 provides a summary of the net interest income earned from trading securities, and net gains and losses due to the realized and unrealized gains and losses from trading activities.

Net interest income also includes dividend income on trading securities and dividend expense on trading securities we have sold, but not yet purchased.

Table 2.2: Net Interest Income and Net Gains (Losses) on Trading Activities

(in millions)	Quarter ended March 31,	
	2021	2020
Interest income:		
Debt securities	\$ 529	766
Equity securities	103	137
Loans held for sale	12	12
Total interest income	644	915
Less: Interest expense	110	141
Net interest income	534	774
Net gains (losses) from trading activities (1):		
Debt securities	(2,106)	2,355
Equity securities	1,153	(4,401)
Loans held for sale	24	(12)
Derivatives (2)	1,277	2,122
Total net gains from trading activities	348	64
Total trading-related net interest and noninterest income	\$ 882	838

(1) Represents realized gains (losses) from our trading activities and unrealized gains (losses) due to changes in fair value of our trading positions.

(2) Excludes economic hedging of mortgage banking and asset/liability management activities, for which hedge results (realized and unrealized) are reported with the respective hedged activities.

Note 3: Available-for-Sale and Held-to-Maturity Debt Securities

Table 3.1 provides the amortized cost, net of the allowance for credit losses (ACL) for debt securities, and fair value by major categories of available-for-sale (AFS) debt securities, which are carried at fair value, and held-to-maturity (HTM) debt securities, which are carried at amortized cost, net of the ACL. The net unrealized gains (losses) for AFS debt securities are reported as a component of cumulative other comprehensive income (OCI), net of the ACL and applicable income taxes. Information on debt

securities held for trading is included in Note 2 (Trading Activities).

Outstanding balances exclude accrued interest receivable on AFS and HTM debt securities, which are included in other assets. See Note 7 (Other Assets) for additional information on accrued interest receivable. Amounts considered to be uncollectible are reversed through interest income. The interest income reversed in first quarter 2021 and 2020 was insignificant.

Table 3.1: Available-for-Sale and Held-to-Maturity Debt Securities Outstanding

(in millions)	Amortized cost, net (1)	Gross unrealized gains	Gross unrealized losses	Fair value

Federal agency mortgage-backed securities	115,437	4,182	(21)	119,598
Non-agency mortgage-backed securities	890	51	(8)	933
Collateralized loan obligations	16,238	148	—	16,386
Total held-to-maturity debt securities	205,720	6,791	(204)	212,307
Total (4)	\$ 421,253	11,913	(467)	432,699

- (1) Represents amortized cost of the securities, net of the ACL of \$41 million and \$28 million related to AFS debt securities and \$89 million and \$41 million related to HTM debt securities at March 31, 2021, and December 31, 2020, respectively.
- (2) Includes investments in tax-exempt preferred debt securities issued by investment funds or trusts that predominantly invest in tax-exempt municipal securities. The amortized cost, net of the ACL and fair value of these types of securities, was \$5.2 billion at March 31, 2021, and \$5.0 billion at December 31, 2020.
- (3) Predominantly consists of commercial mortgage-backed securities at both March 31, 2021, and December 31, 2020.
- (4) We held AFS and HTM debt securities from Federal National Mortgage Association (FNMA) and Federal Home Loan Mortgage Corporation (FHLMC) that each exceeded 10% of stockholders' equity, with an amortized cost of \$103.4 billion and \$89.5 billion and a fair value of \$104.5 billion and \$90.5 billion at March 31, 2021, and an amortized cost of \$99.8 billion and \$88.7 billion and a fair value of \$103.2 billion and \$91.5 billion at December 31, 2020, respectively.

Note 3: Available-for-Sale and Held-to-Maturity Debt Securities (continued)

Table 3.2 details the breakout of purchases of and transfers to HTM debt securities by major category of security.

Table 3.2: Held-to-Maturity Debt Securities Purchases and Transfers

(in millions)	Quarter ended March 31,	
	2021	2020
Purchases of held-to-maturity debt securities (1):		
Securities of U.S. Treasury and federal agencies	\$ —	3,016
Securities of U.S. states and political subdivisions	1,910	866
Federal agency mortgage-backed securities	24,867	15,863
Non-agency mortgage-backed securities	29	62
Collateralized loan obligations	3,953	—
Total purchases of held-to-maturity debt securities	30,759	19,807
Transfers from available-for-sale debt securities to held-to-maturity debt securities:		
Federal agency mortgage-backed securities	16,617	—
Total transfers from available-for-sale debt securities to held-to-maturity debt securities	\$ 16,617	—

(1) Inclusive of securities purchased but not yet settled and noncash purchases from securitization of loans held for sale (LHFS).

Table 3.3 shows the composition of interest income, provision for credit losses, and gross realized gains and losses from sales and impairment write-downs included in earnings related to AFS and HTM debt securities (pre-tax).

Table 3.3: Income Statement Impacts for Available-for-Sale and Held-to-Maturity Debt Securities

(in millions)	Quarter ended March 31,	
	2021	2020
Interest income (1):		
Available-for-sale	\$ 811	1,726
Held-to-maturity	972	980
Total interest income	1,783	2,706
Provision for credit losses:		
Available-for-sale	22	168
Held-to-maturity	47	4
Total provision for credit losses	69	172
Realized gains and losses (2):		
Gross realized gains	151	256
Gross realized losses	—	(4)
Impairment write-downs	—	(15)
Net realized gains	\$ 151	237

(1) Excludes interest income from trading debt securities, which is disclosed in Note 2 (Trading Activities).

(2) Realized gains and losses relate to AFS debt securities. There were no realized gains or losses from HTM debt securities in all periods presented.

Credit Quality

We monitor credit quality of debt securities by evaluating various attributes and utilize such information in our evaluation of the appropriateness of the ACL for debt securities. The credit quality indicators that we most closely monitor include credit ratings and delinquency status and are based on information as of our financial statement date.

CREDIT RATINGS Credit ratings express opinions about the credit quality of a debt security. We determine the credit rating of a security according to the lowest credit rating made available by national recognized statistical rating organizations (NRSROs). Debt securities rated investment grade, that is those with ratings similar to BBB-/Baa3 or above, as defined by NRSROs, are generally considered by the rating agencies and market participants to be low credit risk. Conversely, debt securities rated below investment grade, labeled as “speculative grade” by the rating agencies, are considered to be distinctively higher credit risk than investment grade debt securities. For debt

securities not rated by NRSROs, we determine an internal credit grade of the debt securities (used for credit risk management purposes) equivalent to the credit ratings assigned by major credit agencies. Substantially all of our debt securities were rated by NRSROs at March 31, 2021, and December 31, 2020.

Table 3.4 shows the percentage of fair value of AFS debt securities and amortized cost of HTM debt securities determined to be rated investment grade, inclusive of securities rated based on internal credit grades.

Table 3.4: Investment Grade Debt Securities

(\$ in millions)	Available-for-Sale		Held-to-Maturity	
	Fair value	% investment grade	Amortized cost	% investment grade
March 31, 2021				
Total portfolio (1)	\$ 200,850	99%	232,281	99%
Breakdown by category:				
Securities of U.S. Treasury and federal agencies (2)	\$ 142,874	100%	184,735	100%
Securities of U.S. states and political subdivisions	19,657	99	27,587	100
Collateralized loan obligations (3)	9,850	100	19,031	100
All other debt securities (4)	28,469	92	928	5
December 31, 2020				
Total portfolio (1)	\$ 220,392	99%	205,761	99%
Breakdown by category:				
Securities of U.S. Treasury and federal agencies (2)	\$ 161,229	100%	162,732	100%
Securities of U.S. states and political subdivisions	19,406	99	25,870	100
Collateralized loan obligations (3)	9,018	100	16,255	100
All other debt securities (4)	30,739	93	904	6

(1) 93% and 92% were rated AA- and above at March 31, 2021, and December 31, 2020, respectively.

(2) Includes federal agency mortgage-backed securities.

(3) 99% and 98% were rated AA- and above at March 31, 2021, and December 31, 2020, respectively.

(4) Includes non-U.S. government, non-agency mortgage-backed, and all other debt securities.

DELINQUENCY STATUS AND NONACCRUAL DEBT SECURITIES

Debt security issuers that are delinquent in payment of amounts due under contractual debt agreements have a higher probability of recognition of credit losses. As such, as part of our monitoring of the credit quality of the debt security portfolio, we consider whether debt securities we own are past due in payment of principal or interest payments and whether any securities have been placed into nonaccrual status.

Debt securities that are past due and still accruing were insignificant at both March 31, 2021, and December 31, 2020. The carrying value of debt securities in nonaccrual status was insignificant at both March 31, 2021, and December 31, 2020. Charge-offs on debt securities were insignificant for the quarters ended March 31, 2021 and 2020.

Purchased debt securities with credit deterioration (PCD) are not considered to be in nonaccrual status, as payments from issuers of these securities remain current. PCD securities were insignificant during the quarters ended March 31, 2021 and 2020.

Note 3: Available-for-Sale and Held-to-Maturity Debt Securities (continued)

Unrealized Losses of Available-for-Sale Debt Securities

Table 3.5 shows the gross unrealized losses and fair value of AFS debt securities by length of time those individual securities in each category have been in a continuous loss position. Debt securities on which we have recorded credit impairment are

categorized as being “less than 12 months” or “12 months or more” in a continuous loss position based on the point in time that the fair value declined to below the amortized cost basis, net of allowance for credit losses.

Table 3.5: Gross Unrealized Losses and Fair Value – Available-for-Sale Debt Securities

(in millions)	Less than 12 months		12 months or more		Total	
	Gross unrealized losses	Fair value	Gross unrealized losses	Fair value	Gross unrealized losses	Fair value
March 31, 2021						
Available-for-sale debt securities:						
Securities of U.S. Treasury and federal agencies	\$ (63)	10,584	—	—	(63)	10,584

December 31, 2020						
Available-for-sale debt securities:						
Securities of U.S. Treasury and federal agencies	\$ —	—	—	—	—	—
Non-U.S. government securities	(3)	16,812	—	—	(3)	16,812
Securities of U.S. states and political subdivisions	(51)	3,681	(30)	1,101	(81)	4,782
Federal agency mortgage-backed securities	(27)	11,310	(1)	316	(28)	11,626
Non-agency mortgage-backed securities	(28)	1,366	(18)	534	(46)	1,900
Collateralized loan obligations	(27)	5,082	(17)	1,798	(44)	6,880
Other debt securities	(16)	647	(45)	1,604	(61)	2,251
Total available-for-sale debt securities	\$ (152)	38,898	(111)	5,353	(263)	44,251

We have assessed each debt security with gross unrealized losses included in the previous table for credit impairment. As part of that assessment we evaluated and concluded that we do not intend to sell any of the debt securities, and that it is more likely than not that we will not be required to sell, prior to recovery of the amortized cost basis. We evaluate, where necessary, whether credit impairment exists by comparing the present value of the expected cash flows to the debt securities' amortized cost basis. Credit impairment is recorded as an ACL for debt securities.

For descriptions of the factors we consider when analyzing debt securities for impairment as well as methodology and significant inputs used to measure credit losses, see Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K.

Contractual Maturities

Table 3.6 and Table 3.7 show the remaining contractual maturities, amortized cost, net of the ACL, fair value and weighted average effective yields of AFS and HTM debt securities, respectively. The remaining contractual principal

maturities for mortgage-backed securities (MBS) do not consider prepayments. Remaining expected maturities will differ from contractual maturities because borrowers may have the right to prepay obligations before the underlying mortgages mature.

Table 3.6: Contractual Maturities – Available-for-Sale Debt Securities

Note 4: Loans and Related Allowance for Credit Losses

Table 4.1 presents total loans outstanding by portfolio segment and class of financing receivable. Outstanding balances include unearned income, net deferred loan fees or costs, and unamortized discounts and premiums. These amounts were less than 1% of our total loans outstanding at March 31, 2021, and December 31, 2020.

Outstanding balances exclude accrued interest receivable on loans, except for certain revolving loans, such as credit card loans.

See Note 7 (Other Assets) for additional information on accrued interest receivable. Amounts considered to be uncollectible are reversed through interest income. During first quarter 2021, we reversed accrued interest receivable of \$16 million for our commercial portfolio segment and \$51 million for our consumer portfolio segment, compared with \$9 million and \$63 million, respectively, for the same period a year ago.

Table 4.1: Loans Outstanding

(in millions)	Mar 31, 2021	Dec 31, 2020
Commercial:		
Commercial and industrial	\$ 319,055	318,805
Real estate mortgage	121,198	121,720
Real estate construction	21,533	21,805
Lease financing	15,734	16,087
Total commercial	477,520	478,417
Consumer:		
Residential mortgage – first lien	254,363	276,674
Residential mortgage – junior lien	21,308	23,286
Credit card	34,246	36,664
Auto	49,210	48,187
Other consumer	24,925	24,409
Total consumer	384,052	409,220
Total loans	\$ 861,572	887,637

Our non-U.S. loans are reported by respective class of financing receivable in the table above. Substantially all of our non-U.S. loan portfolio is commercial loans. Table 4.2 presents total non-U.S. commercial loans outstanding by class of financing receivable.

Table 4.2: Non-U.S. Commercial Loans Outstanding

(in millions)	Mar 31, 2021	Dec 31, 2020

Loan Purchases, Sales, and Transfers

Table 4.3 presents the proceeds paid or received for purchases and sales of loans and transfers from loans held for investment to mortgages/loans held for sale. The table excludes loans for

which we have elected the fair value option and government insured/guaranteed residential mortgage – first lien loans because their loan activity normally does not impact the ACL.

Table 4.3: Loan Purchases, Sales, and Transfers

(in millions)	2021			2020		
	Commercial	Consumer	Total	Commercial	Consumer	Total
Quarter ended March 31,						
Purchases	\$ 48	1	49	341	1	342
Sales	(273)	(188)	(461)	(813)	(26)	(839)
Transfers (to)/from LHFS	(435)	63	(372)	77	2	79

Commitments to Lend

A commitment to lend is a legally binding agreement to lend to a customer, usually at a stated interest rate, if funded, and for specific purposes and time periods. We generally require a fee to extend such commitments. Certain commitments are subject to loan agreements with covenants regarding the financial performance of the customer or borrowing base formulas on an ongoing basis that must be met before we are required to fund the commitment. We may reduce or cancel consumer commitments, including home equity lines and credit card lines, in accordance with the contracts and applicable law. For unconditionally cancelable commitments at our discretion, we do not recognize an ACL.

We may, as a representative for other lenders, advance funds or provide for the issuance of letters of credit under syndicated loan or letter of credit agreements. Any advances are generally repaid in less than a week and would normally require default of both the customer and another lender to expose us to loss. The unfunded amount of these temporary advance arrangements totaled approximately \$81.9 billion at March 31, 2021.

We issue commercial letters of credit to assist customers in purchasing goods or services, typically for international trade. At both March 31, 2021, and December 31, 2020, we had \$1.3 billion, of outstanding issued commercial letters of credit. We also originate multipurpose lending commitments under which borrowers have the option to draw on the facility for different purposes in one of several forms, including a standby letter of credit. See Note 11 (Guarantees and Other Commitments) for additional information on standby letters of credit.

When we enter into commitments, we are exposed to credit risk. The maximum credit risk for these commitments will generally be lower than the contractual amount because a significant portion of these commitments are not funded. We manage the potential risk in commitments to lend by limiting the total amount of commitments, both by individual customer and in total, by monitoring the size and maturity structure of these commitments and by applying the same credit standards for these commitments as for all of our credit activities.

For loans and commitments to lend, we generally require collateral or a guarantee. We may require various types of collateral, including commercial and consumer real estate, autos, other short-term liquid assets such as accounts receivable or inventory and long-lived assets, such as equipment and other business assets. Collateral requirements for each loan or commitment may vary based on the loan product and our assessment of a customer's credit risk according to the specific credit underwriting, including credit terms and structure.

The contractual amount of our unfunded credit commitments, including unissued standby and commercial letters of credit, is summarized by portfolio segment and class of financing receivable in Table 4.4. The table excludes the issued standby and commercial letters of credit and temporary advance arrangements described above.

Table 4.4: Unfunded Credit Commitments

(in millions)	Mar 31, 2021	Dec 31, 2020
Commercial:		
Commercial and industrial	\$ 385,575	378,167
Real estate mortgage	8,584	7,993

Total consumer	244,077	234,625
Total unfunded credit commitments	\$ 653,386	636,435

Allowance for Credit Losses

Table 4.5 presents the allowance for credit losses (ACL) for loans, which consists of the allowance for loan losses and the allowance for unfunded credit commitments. The ACL for loans decreased

\$1.7 billion from December 31, 2020, due to continued improvement in the economic environment.

Table 4.5: Allowance for Credit Losses for Loans

(1) Represents the overall decrease in our ACL for loans as a result of our adoption of CECL on January 1, 2020.

(2) Represents the allowance estimated for PCI loans that automatically became PCD loans with the adoption of CECL. For additional information, see Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K.

(3) Loans with an allowance measured by discounting expected cash flows using the loan's effective interest rate over the remaining life of the loan recognize changes in allowance attributable to the passage of time as interest income.

Credit Quality

We monitor credit quality by evaluating various attributes and utilize such information in our evaluation of the appropriateness of the ACL for loans. The following sections provide the credit quality indicators we most closely monitor. The credit quality indicators are generally based on information as of our financial statement date, with the exception of updated Fair Isaac Corporation (FICO) scores and updated loan-to-value (LTV)/combined LTV (CLTV). We obtain FICO scores at loan origination and the scores are generally updated at least quarterly, except in limited circumstances, including compliance with the Fair Credit Reporting Act (FCRA). Generally, the LTV and CLTV indicators are updated in the second month of each quarter, with updates no older than December 31, 2020.

COMMERCIAL CREDIT QUALITY INDICATORS We manage a consistent process for assessing commercial loan credit quality.

Generally, commercial loans are subject to individual risk assessment using our internal borrower and collateral quality ratings, which is our primary credit quality indicator. Our ratings are aligned to regulatory definitions of pass and criticized categories with the criticized segmented among special mention, substandard, doubtful and loss categories.

Table 4.7 provides the outstanding balances of our commercial loan portfolio by risk category. Credit quality information is provided with the year of origination for term loans. Revolving loans may convert to term loans as a result of a contractual provision in the original loan agreement or if modified in a troubled debt restructuring (TDR). At March 31, 2021, we had \$445.6 billion and \$31.9 billion of pass and criticized commercial loans, respectively.

Note 4: Loans and Related Allowance for Credit Losses (continued)

Table 4.8 provides past due information for commercial loans, which we monitor as part of our credit risk management practices; however, delinquency is not a primary credit quality indicator for commercial loans. Payment deferral activities

instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies for customers who otherwise would have moved into past due status.

Table 4.8: Commercial Loan Categories by Delinquency Status

(in millions)	Commercial and industrial	Real estate mortgage	Real estate construction	Lease financing	Total

Total commercial loans	\$ 318,805	121,720	21,805	16,087	478,417

CONSUMER CREDIT QUALITY INDICATORS We have various classes of consumer loans that present unique credit risks. Loan delinquency, FICO credit scores and LTV for residential mortgage loans are the primary credit quality indicators that we monitor and utilize in our evaluation of the appropriateness of the ACL for the consumer loan portfolio segment.

Many of our loss estimation techniques used for the ACL for loans rely on delinquency-based models; therefore, delinquency is an important indicator of credit quality in the establishment of our ACL for loans.

Table 4.9 provides the outstanding balances of our consumer loan portfolio by delinquency status. Payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies for customers who otherwise would have moved into past due status.

Credit quality information is provided with the year of origination for term loans. Revolving loans may convert to term loans as a result of a contractual provision in the original loan agreement or if modified in a TDR. The revolving loans converted to term loans in the credit card loan category represent credit card loans with modified terms that require payment over a specific term.

(1) Represents loans whose repayments are predominantly insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA). Loans insured/guaranteed by the FHA/VA and 90+ DPD totaled \$8.1 billion and \$11.1 billion at March 31, 2021, and December 31, 2020, respectively.

Of the \$3.2 billion of consumer loans not government insured/guaranteed that are 90 days or more past due at March 31, 2021, \$598 million was accruing, compared with

\$2.7 billion past due and \$612 million accruing at December 31, 2020.

Table 4.10 provides the outstanding balances of our consumer loan portfolio by FICO score. Substantially all of the scored consumer portfolio has an updated FICO score of 680 and above, reflecting a strong current borrower credit profile. FICO scores are not available for certain loan types or may not be required if we deem it unnecessary due to strong collateral and

other borrower attributes. Loans not requiring a FICO score totaled \$14.7 billion and \$13.2 billion at March 31, 2021, and December 31, 2020, respectively. Substantially all loans not requiring a FICO score are securities-based loans originated through retail brokerage.

(1) Represents loans whose repayments are predominantly insured by the FHA or guaranteed by the VA.

LTV refers to the ratio comparing the loan's unpaid principal balance to the property's collateral value. CLTV refers to the combination of first lien mortgage and junior lien mortgage (including unused line amounts for credit line products) ratios. LTVs and CLTVs are updated quarterly using a cascade approach which first uses values provided by automated valuation models (AVMs) for the property. If an AVM is not available, then the

value is estimated using the original appraised value adjusted by the change in Home Price Index (HPI) for the property location. If an HPI is not available, the original appraised value is used. The HPI value is normally the only method considered for high value properties, generally with an original value of \$1 million or more, as the AVM values have proven less accurate for these properties.

Table 4.11 shows the most updated LTV and CLTV distribution of the residential mortgage – first lien and residential mortgage – junior lien loan portfolios. We consider the trends in residential real estate markets as we monitor credit risk and establish our ACL. In the event of a default, any loss should be

limited to the portion of the loan amount in excess of the net realizable value of the underlying real estate collateral value. Certain loans do not have an LTV or CLTV due to industry data availability and portfolios acquired from or serviced by other institutions.

(1) Reflects total loan balances with LTV/CLTV amounts in excess of 100%. In the event of default, the loss content would generally be limited to only the amount in excess of 100% LTV/CLTV.
(2) Represents loans whose repayments are predominantly insured by the FHA or guaranteed by the VA.

Note 4: Loans and Related Allowance for Credit Losses (continued)

NONACCRUAL LOANS Table 4.12 provides loans on nonaccrual status. In connection with our adoption of CECL, nonaccrual loans may have an ACL or a negative allowance for credit losses from expected recoveries of amounts previously written off. Payment

deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies for customers who otherwise would have moved into nonaccrual status.

Table 4.12: Nonaccrual Loans

(1) Nonaccrual loans may not have an allowance for credit losses if the loss expectations are zero given solid collateral value.

LOANS IN PROCESS OF FORECLOSURE Our recorded investment in consumer mortgage loans collateralized by residential real estate property that are in process of foreclosure was \$1.3 billion and \$2.1 billion at March 31, 2021, and December 31, 2020, respectively, which included \$947 million and \$1.7 billion, respectively, of loans that are government insured/guaranteed. Under the Consumer Financial Protection Bureau guidelines, we do not commence the foreclosure process on residential mortgage loans until after the loan is 120 days delinquent. Foreclosure procedures and timelines vary depending on whether the property address resides in a judicial or non-judicial state. Judicial states require the foreclosure to be processed through the state's courts while non-judicial states are processed without court intervention. Foreclosure timelines vary according to state law. In connection with our actions to support customers during the COVID-19 pandemic, we have suspended certain mortgage foreclosure activities.

LOANS 90 DAYS OR MORE PAST DUE AND STILL ACCRUING Certain loans 90 days or more past due are still accruing, because they are (1) well-secured and in the process of collection or (2) residential mortgage or consumer loans exempt under regulatory rules from being classified as nonaccrual until later delinquency, usually 120 days past due.

Table 4.13 shows loans 90 days or more past due and still accruing by class for loans not government insured/guaranteed.

Total, not government insured/ guaranteed	\$ 867	690

(1) Represents loans whose repayments are predominantly insured by the FHA or guaranteed by the VA.

TROUBLED DEBT RESTRUCTURINGS (TDRs) When, for economic or legal reasons related to a borrower's financial difficulties, we grant a concession for other than an insignificant period of time to a borrower that we would not otherwise consider, the related loan is classified as a TDR, the balance of which totaled \$13.3 billion and \$14.5 billion at March 31, 2021, and December 31, 2020, respectively. We do not consider loan resolutions such as foreclosure or short sale to be a TDR. In addition, COVID-related modifications are generally not classified as TDRs due to the relief under the CARES Act and the Interagency Statement. For additional information on the TDR relief, see Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K.

We may require some consumer borrowers experiencing financial difficulty to make trial payments generally for a period of three to four months, according to the terms of a planned permanent modification, to determine if they can perform according to those terms. These arrangements represent trial modifications, which we classify and account for as TDRs. While loans are in trial payment programs, their original terms are not considered modified and they continue to advance through delinquency status and accrue interest according to their original terms.

Commitments to lend additional funds on loans whose terms have been modified in a TDR amounted to \$506 million and \$489 million at March 31, 2021, and December 31, 2020, respectively.

Table 4.14 summarizes our TDR modifications for the periods presented by primary modification type and includes the financial effects of these modifications. For those loans that modify more than once, the table reflects each modification that occurred during the period. Loans that both modify and are paid off or written-off within the period, as well as changes in recorded investment during the period for loans modified in prior periods, are not included in the table.

- (1) Amounts represent the recorded investment in loans after recognizing the effects of the TDR, if any. TDRs may have multiple types of concessions, but are presented only once in the first modification type based on the order presented in the table above. The reported amounts include loans remodified of \$256 million and \$263 million for first quarter 2021 and 2020, respectively.
- (2) Other concessions include loans discharged in bankruptcy, loan renewals, term extensions and other interest and noninterest adjustments, but exclude modifications that also forgive principal and/or reduce the contractual interest rate.
- (3) Charge-offs include write-downs of the investment in the loan in the period it is contractually modified. The amount of charge-off will differ from the modification terms if the loan has been charged down prior to the modification based on our policies. In addition, there may be cases where we have a charge-off/down with no legal principal modification. No modifications resulted in deferring or legally forgiving principal in first quarter 2021, while \$29 million modifications resulted in deferring or legally forgiving principal for the same period in 2020.
- (4) Recorded investment related to interest rate reduction reflects the effect of reduced interest rates on loans with an interest rate concession as one of their concession types, which includes loans reported as a principal primary modification type that also have an interest rate concession.
- (5) Trial modifications are granted a delay in payments due under the original terms during the trial payment period. However, these loans continue to advance through delinquency status and accrue interest according to their original terms. Any subsequent permanent modification generally includes interest rate related concessions; however, the exact concession type and resulting financial effect are usually not known until the loan is permanently modified. Trial modifications for the period are presented net of previously reported trial modifications that became permanent in the current period.

Table 4.15 summarizes permanent modification TDRs that have defaulted in the current period within 12 months of their permanent modification date. We are reporting these defaulted

TDRs based on a payment default definition of 90 days past due for the commercial portfolio segment and 60 days past due for the consumer portfolio segment.

Note 5: Leasing Activity

The information below provides a summary of our leasing activities as a lessor and lessee. See Note 5 (Leasing Activity) in our 2020 Form 10-K for additional information about our leasing activities.

As a Lessor

Noninterest income on leases, which is presented in Table 5.1, is included in other noninterest income on our consolidated statement of income. Lease expense, included in other noninterest expense on our consolidated statement of income, was \$226 million and \$260 million in first quarter 2021 and 2020, respectively.

Table 5.1: Leasing Revenue

(in millions)	Quarter ended March 31,	
	2021	2020
Interest income on lease financing	\$ 171	211
Other lease revenues:		
Variable revenues on lease financing	26	27

Total equity method	20,352	20,455
Other:		
Federal Reserve Bank stock and other at cost (1)	3,585	3,588
Private equity (2)	4,643	4,208
Total equity securities not held for trading	39,727	39,228
Total equity securities	\$ 59,981	62,260

(1) Substantially all relates to investments in Federal Reserve Bank stock at both March 31, 2021, and December 31, 2020.

(2) Represents nonmarketable equity securities accounted for under the measurement alternative.

Equity Securities Held for Trading

Equity securities held for trading purposes are marketable equity securities traded on organized exchanges. These securities are held as part of our customer accommodation trading activities. For additional information on these activities, see Note 2 (Trading Activities).

Equity Securities Not Held for Trading

We also hold equity securities unrelated to trading activities. These securities include private equity and tax credit investments, securities held as economic hedges or to meet regulatory requirements (for example, Federal Reserve Bank and Federal Home Loan Bank stock).

FAIR VALUE Marketable equity securities held for purposes other than trading consist of holdings of publicly traded equity securities held for investment purposes and, to a lesser extent, exchange-traded equity funds held to economically hedge obligations related to our deferred compensation plans. We account for certain nonmarketable equity securities under the fair value method, and substantially all of these securities are economically hedged with equity derivatives.

EQUITY METHOD Our equity method investments consist of tax credit and private equity investments, the majority of which are our low-income housing tax credit (LIHTC) investments.

We invest in affordable housing projects that qualify for the LIHTC, which are designed to promote private development of low-income housing. These investments typically generate a return through realization of federal tax credit and other tax benefits. In first quarter 2021, we recognized pre-tax losses of \$326 million related to our LIHTC investments, compared with \$339 million in first quarter 2020. These losses were recognized in other noninterest income. We also recognized total tax benefits of \$435 million in first quarter 2021, which included tax credits recorded to income taxes of \$354 million. In first quarter 2020, total tax benefits were \$398 million, which included tax credits of \$314 million. We are periodically required to provide additional financial support during the investment period. A liability is recognized for unfunded commitments that are both legally binding and probable of funding. These commitments are predominantly funded within three years of initial investment. Our liability for these unfunded commitments was \$4.1 billion at March 31, 2021, and \$4.2 billion at December 31, 2020. This liability for unfunded commitments is included in long-term debt.

OTHER The remaining portion of our nonmarketable equity securities portfolio consists of securities accounted for using the cost or measurement alternative.

Note 6: Equity Securities (continued)

Realized Gains and Losses Not Held for Trading

Table 6.2 provides a summary of the net gains and losses from equity securities not held for trading, which excludes equity method adjustments for our share of the investee's earnings or

losses that are recognized in other noninterest income. Gains and losses for securities held for trading are reported in net gains on trading and securities.

Table 6.2: Net Gains (Losses) from Equity Securities Not Held for Trading

(in millions)	Quarter ended March 31,	
	2021	2020
Net gains (losses) from equity securities carried at fair value:		
Marketable equity securities	\$ 60	(803)
Nonmarketable equity securities	(358)	(1,104)
Total equity securities carried at fair value	(298)	(1,907)
Net gains (losses) from nonmarketable equity securities not carried at fair value (1):		
Impairment write-downs	(15)	(935)
Net unrealized gains related to measurement alternative observable transactions	225	222
Net realized gains on sale	55	—
Total nonmarketable equity securities not carried at fair value	265	(713)
Net losses from economic hedge derivatives (2)	425	1,219
Total net gains from equity securities not held for trading	\$ 392	(1,401)

(1) Includes impairment write-downs and net realized gains on sale related to private equity and venture capital investments in consolidated portfolio companies, which are not reported in equity securities on our consolidated balance sheet.

(2) Includes net gains (losses) on derivatives not designated as hedging instruments.

Measurement Alternative

Table 6.3 provides additional information about the impairment write-downs and observable price adjustments related to

nonmarketable equity securities accounted for under the measurement alternative. Gains and losses related to these adjustments are also included in Table 6.2.

Table 6.3: Net Gains (Losses) from Measurement Alternative Equity Securities

(in millions)	Quarter ended March 31,	
	2021	2020
Net gains (losses) recognized in earnings during the period:		
Gross unrealized gains due to observable price changes	\$ 225	222
Impairment write-downs	(12)	(354)
Realized net gains from sale	—	2
Total net gains recognized during the period	\$ 213	(130)

Table 6.4 presents cumulative carrying value adjustments to nonmarketable equity securities accounted for under the measurement alternative that were still held at the end of each reporting period presented.

Table 6.4: Measurement Alternative Cumulative Gains (Losses)

(in millions)	Mar 31,	Dec 31,

Due from customers on acceptances	227	268
Other	13,378	11,768
Total other assets	\$ 78,112	87,337

Note 8: Securitizations and Variable Interest Entities

Involvement with Variable Interest Entities (VIEs)

In the normal course of business, we enter into various types of on- and off-balance sheet transactions with special purpose entities (SPEs), which are corporations, trusts, limited liability companies or partnerships that are established for a limited purpose. SPEs are often formed in connection with securitization transactions whereby financial assets are transferred to an SPE. SPEs formed in connection with securitization transactions are generally considered variable interest entities (VIEs). The VIE may alter the risk profile of the asset by entering into derivative transactions or obtaining credit support, and issues various forms of interests in those assets to investors. When we transfer financial assets from our consolidated balance sheet to a VIE in connection with a securitization, we typically receive cash and sometimes other interests in the VIE as proceeds for the assets we transfer. In certain transactions with VIEs, we may retain the right to service the transferred assets and repurchase the transferred assets if the outstanding balance of the assets falls below the level at which the cost to service the assets exceed the benefits. In addition, we may purchase the right to service loans transferred to a VIE by a third party.

In connection with our securitization or other VIE activities, we have various forms of ongoing involvement with VIEs, which may include:

- underwriting securities issued by VIEs and subsequently making markets in those securities;
- providing credit enhancement on securities issued by VIEs through the use of letters of credit or financial guarantees;
- entering into other derivative contracts with VIEs;
- holding senior or subordinated interests in VIEs;
- acting as servicer or investment manager for VIEs;
- providing administrative or trustee services to VIEs; and
- providing seller financing to VIEs.

Loan Sales and Securitization Activity

We periodically transfer consumer and commercial loans and other types of financial assets in securitization and whole loan sale transactions.

MORTGAGE LOANS SOLD TO U.S. GOVERNMENT SPONSORED ENTITIES AND TRANSACTIONS WITH GINNIE MAE In the normal course of business we sell originated and purchased residential and commercial mortgage loans to government-sponsored entities (GSEs). These loans are generally transferred into securitizations sponsored by the GSEs, which provide certain credit guarantees to investors and servicers. We also transfer mortgage loans into securitizations pursuant to Government National Mortgage Association (GNMA) guidelines which are insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA). Mortgage loans eligible for securitization with the GSEs or GNMA are considered conforming loans. The GSEs or GNMA design the structure of these securitizations, sponsor the involved VIEs, and have power over the activities most significant to the VIE.

We account for loans transferred in conforming mortgage loan securitization transactions as sales and do not consolidate the VIEs as we are not the primary beneficiary. In exchange for the transfer of loans, we typically receive securities issued by the VIEs which we sell to third parties for cash or hold for investment purposes as HTM or AFS securities. We also retain servicing rights on the transferred loans. As a servicer, we retain the option

to repurchase loans from GNMA loan securitization pools, which becomes exercisable when three scheduled loan payments remain unpaid by the borrower. During the quarters ended March 31, 2021 and 2020, we repurchased loans of \$1.9 billion and \$1.5 billion, respectively, which predominantly represented repurchases of government insured loans. We recorded assets and related liabilities of \$133 million and \$176 million at March 31, 2021, and December 31, 2020, respectively, where we did not exercise our option to repurchase eligible loans.

Upon transfers of loans, we also provide indemnification for losses incurred due to material breaches of contractual representations and warranties, as well as other recourse arrangements. At March 31, 2021, and December 31, 2020, our liability associated with these provisions was \$209 million and \$221 million, respectively, and the maximum exposure to loss was \$13.4 billion and \$13.7 billion, respectively.

Off-balance sheet mortgage loans sold or securitized presented in Table 8.5 are predominantly loans securitized by the GSEs and GNMA. See Note 9 (Mortgage Banking Activities) for additional information about residential and commercial servicing rights, advances and servicing fees. Substantially all residential servicing activity is related to assets transferred to GSE and GNMA securitizations.

NONCONFORMING MORTGAGE LOAN SECURITIZATIONS In the normal course of business, we sell nonconforming residential and commercial mortgage loans in securitization transactions that we design and sponsor. Nonconforming mortgage loan securitizations do not involve a government credit guarantee, and accordingly, beneficial interest holders are subject to credit risk of the underlying assets held by the securitization VIE. We typically originate the transferred loans, account for the transfers as sales and do not consolidate the VIE. We also typically retain the right to service the loans and may hold other beneficial interests issued by the VIEs, such as debt securities held for investment purposes. Our servicing role related to nonconforming commercial mortgage loan securitizations is limited to primary or master servicer and the most significant decisions impacting the performance of the VIE are generally made by the special servicer or the controlling class security holder. For our residential nonconforming mortgage loan securitizations accounted for as sales, we either do not hold variable interests that we consider potentially significant or are not the primary servicer for a majority of the VIE assets.

WHOLE LOAN SALE TRANSACTIONS We also sell whole loans to VIEs where we have continuing involvement in the form of financing. We account for these transfers as sales, and do not consolidate the VIEs as we do not have the power to direct the most significant activities of the VIEs.

Table 8.1 presents information about transfers of assets during the period for which we recorded the transfers as sales and have continuing involvement with the transferred assets. In connection with these transfers, we received proceeds and recorded servicing assets, securities, and loans. Substantially all transfers were related to residential mortgage securitizations with the GSEs or GNMA and resulted in no gain or loss because the loans were already measured at fair value on a recurring basis. Each of these interests are initially measured at fair value. Servicing rights are classified as Level 3 measurements, and generally securities are classified as Level 2.

Table 8.1: Transfers with Continuing Involvement

(in millions)	2021		2020	
	Residential mortgages	Commercial mortgages	Residential mortgages	Commercial mortgages
Quarter ended March 31,				
Asset balances sold	\$ 40,586	3,191	38,385	2,728
Proceeds from transfer (1)	40,691	3,282	38,420	2,797
Net gains (losses) on sale	105	91	35	69
Continuing involvement (2):				
Servicing rights recognized	\$ 407	47	446	34
Securities recognized (3)	10,223	29	—	62
Loans recognized	926	—	—	—

(1) Represents cash proceeds and the fair value of non-cash beneficial interests recognized at securitization settlement. Prior periods have been revised to conform with the current period presentation.

(2) Represents assets or liabilities recognized at securitization settlement date related to our continuing involvement in the transferred assets.

(3) Represents debt securities obtained at securitization settlement held for investment purposes that are classified as available-for-sale or held-to-maturity, which predominantly relate to agency securities. Excludes trading debt securities held temporarily for market-marking purposes, which are sold to third parties at or shortly after securitization settlement, of \$6.8 billion and \$7.7 billion, during the quarters ended March 31, 2021 and 2020, respectively.

In the normal course of business we purchase certain non-agency securities at initial securitization or subsequently in the secondary market. We also provide seller financing in the form of loans. During the quarters ended March 31, 2021 and 2020, we received cash flows of \$75 million and \$73 million, respectively, predominantly related to principal and interest payments on these securities and loans.

Table 8.2 presents the key weighted-average assumptions we used to initially measure residential MSRs recognized during the periods presented.

Table 8.2: Residential Mortgage Servicing Rights

	2021	2020
Quarter ended March 31,		
Prepayment speed (1)	14.4 %	12.7
Discount rate	6.0	6.5
Cost to service (\$ per loan) (2)	\$ 82	91

(1) The prepayment speed assumption for residential MSRs includes a blend of prepayment speeds and default rates. Prepayment speed assumptions are influenced by mortgage interest rate inputs as well as our estimation of drivers of borrower behavior.

(2) Includes costs to service and unreimbursed foreclosure costs, which can vary period to period due to changes in model assumptions and the mix of modified government-guaranteed loans sold to GNMA.

See Note 15 (Fair Values of Assets and Liabilities) and Note 9 (Mortgage Banking Activities) for additional information on key economic assumptions for residential MSRs.

SALE OF STUDENT LOAN PORTFOLIO In first quarter 2021, we sold \$5.6 billion of student loans, servicing-released. We received \$5.8 billion in proceeds from the sale and recognized a \$208 million gain which is included in other noninterest income on our consolidated statement of income. In connection with the sale, we provided \$2.2 billion of collateralized loan financing to a third-party sponsored VIE. The loan is measured at amortized cost and is classified in loans on the consolidated balance sheet. The collateral supporting our loan includes the student loans we sold. We do not consolidate the VIE as we do not have power over the significant activities of the entity. Substantially all of the remaining portfolio was sold in second quarter 2021.

RESECURITIZATION ACTIVITIES We enter into resecuritization transactions as part of our trading activities to accommodate the investment and risk management activities of our customers. In our resecuritization transactions, we transfer trading debt securities to VIEs in exchange for new beneficial interests that are sold to third parties at or shortly after securitization settlement. This activity is performed for customers seeking a specific return or risk profile. Substantially all of our transactions involve the resecuritization of conforming mortgage-backed securities issued by the GSEs or GNMA. We do not consolidate the resecuritization VIEs as we share in the decision-making power with third parties and do not hold significant economic interests in the VIEs other than for market-making activities. Table 8.3 presents information about assets transferred to resecuritization VIEs and Table 8.4 presents information about our resecuritization VIEs.

Table 8.3: Transfers to Resecuritization VIEs

(in millions)	2021	2020
Quarter ended March 31,		
Assets transferred	\$ 17,429	9,472
Securities recognized	1,014	662

Table 8.4: Resecuritization VIEs

(in millions)	Mar 31, 2021	Dec 31, 2020
Total VIE assets	\$ 131,892	130,446
Carrying value of securities	1,343	1,461

Note 8: Securitizations and Variable Interest Entities (continued)

Off-Balance Sheet Loans

Table 8.5 presents information about the principal balances of off-balance sheet loans that were sold or securitized, including residential mortgage loans sold to the GSEs, GNMA and other investors, for which we have some form of continuing involvement (including servicer). Delinquent loans include loans 90 days or more past due and loans in bankruptcy, regardless of delinquency status. In accordance with applicable servicing

guidelines, delinquency status continues to advance for loans with COVID-related payment deferrals. For loans sold or securitized where servicing is our only form of continuing involvement, we generally experience a loss only if we were required to repurchase a delinquent loan or foreclosed asset due to a breach in representations and warranties associated with our loan sale or servicing contracts.

Table 8.5: Off-Balance Sheet Loans Sold or Securitized

(in millions)	Total loans		Delinquent loans and foreclosed assets (1)		Net charge-offs (2)	
	Mar 31, 2021	Dec 31, 2020	Mar 31, 2021	Dec 31, 2020	Quarter ended March 31,	
					2021	2020
Commercial	\$ 114,247	114,134	1,712	2,217	115	71
Residential	767,216	818,886	25,146	29,962	6	31
Total off-balance sheet sold or securitized loans (3)	\$ 881,463	933,020	26,858	32,179	121	102

(1) Includes \$242 million and \$394 million of commercial foreclosed assets and \$166 million and \$204 million of residential foreclosed assets at March 31, 2021, and December 31, 2020, respectively.

(2) Net charge-offs exclude loans sold to FNMA, FHLMC and GNMA as we do not service or manage the underlying real estate upon foreclosure and, as such, do not have access to net charge-off information.

(3) At March 31, 2021, and December 31, 2020, the table includes total loans of \$813.1 billion and \$864.8 billion, delinquent loans of \$23.9 billion and \$28.5 billion, and foreclosed assets of \$121 million and \$152 million, respectively, for FNMA, FHLMC and GNMA.

Transactions with Unconsolidated VIEs

MORTGAGE LOAN SECURITIZATIONS Table 8.6 includes nonconforming mortgage loan securitizations where we originate and transfer the loans to the unconsolidated securitization VIEs that we sponsor. For additional information about these VIEs, see the "Loan Sales and Securitization Activity" section within this Note. Nonconforming mortgage loan securitizations also include commercial mortgage loan securitizations sponsored by third parties where we did not originate or transfer the loans but serve as master servicer and invest in securities that could be potentially significant to the VIE.

Conforming loan securitization and resecuritization transactions involving the GSEs and GNMA are excluded from Table 8.6 because we are not the sponsor or we do not have power over the activities most significant to the VIEs. Additionally, due to the nature of the guarantees provided by the GSEs and the FHA and VA, our credit risk associated with these VIEs is limited. For additional information about conforming mortgage loan securitizations and resecuritizations, see the "Loan Sales and Securitization Activity" and "Resecuritization Activities" sections within this Note.

TAX CREDIT STRUCTURES We co-sponsor and make investments in affordable housing and sustainable energy projects that are designed to generate a return primarily through the realization of federal tax credits. The projects are typically managed by project sponsors who have the power over the VIE's assets. In some instances, our investments in these structures may require that we fund future capital commitments at the discretion of the project sponsors.

COMMERCIAL REAL ESTATE LOANS We transfer purchased industrial development bonds and GSE credit enhancements to VIEs in exchange for beneficial interests. We own all of the beneficial interests and may also service the underlying mortgages that serve as collateral to the bonds. Prior to first quarter 2021, we consolidated these VIEs as we controlled the key decisions. During first quarter 2021, we amended the structures such that we no longer control the key decisions of the VIEs. The GSEs have the power to direct the servicing and workout activities of the VIE in the event of a default. As a result,

we deconsolidated the VIEs during first quarter 2021, and recognized the beneficial interests at fair value on our consolidated balance sheet.

OTHER VIE STRUCTURES We engage in various forms of structured finance arrangements with other VIEs, including collateralized debt obligations, asset-backed finance structures and other securitizations collateralized by asset classes other than mortgages. Collateral may include rental properties, asset-backed securities, student loans, mortgage loans and auto loans. We may participate in structuring or marketing the arrangements, as well as provide financing, service one or more of the underlying assets, or enter into derivatives with the VIEs. We may also receive fees for those services. We are not the primary beneficiary of these structures because we do not have power to direct the most significant activities of the VIEs.

Table 8.6 provides a summary of our exposure to the unconsolidated VIEs described above, which includes investments in securities, loans, guarantees, liquidity agreements, commitments and certain derivatives. We exclude certain transactions with unconsolidated VIEs when our continuing involvement is temporary or administrative in nature or insignificant in size.

In Table 8.6, "Total VIE assets" represents the remaining principal balance of assets held by unconsolidated VIEs using the most current information available. For VIEs that obtain exposure to assets synthetically through derivative instruments, the notional amount of the derivative is included in the asset balance. "Carrying value" is the amount in our consolidated balance sheet related to our involvement with the unconsolidated VIEs. "Maximum exposure to loss" is determined as the carrying value of our investment in the VIEs excluding the unconditional repurchase options that have not been exercised, plus the remaining undrawn liquidity and lending commitments, the notional amount of net written derivative contracts, and generally the notional amount of, or stressed loss estimate for, other commitments and guarantees.

Debt, guarantees and other commitments include amounts related to loans sold that we may be required to repurchase, or otherwise indemnify or reimburse the investor or insurer for losses incurred, due to material breach of contractual

representations and warranties as well as other retained recourse arrangements. The maximum exposure to loss for material breach of contractual representations and warranties represents a stressed case estimate we utilize for determining stressed case regulatory capital needs and is considered to be a remote scenario.

“Maximum exposure to loss” represents estimated loss that would be incurred under severe, hypothetical circumstances, for

which we believe the possibility is extremely remote, such as where the value of our interests and any associated collateral declines to zero, without any consideration of recovery or offset from any economic hedges. Accordingly, this disclosure is not an indication of expected loss.

Table 8.6: Unconsolidated VIEs

(in millions)	Carrying value – asset (liability)						
	Total VIE assets	Loans	Debt securities (1)	Equity securities	All other assets (2)	Debt and other liabilities	Net assets
March 31, 2021

Other	—	89	—	51	62	230	432
Total	\$ 1,849	1,849	2,303	11,688	669	3,372	19,881

(1) Includes \$267 million and \$310 million of securities classified as trading at March 31, 2021, and December 31, 2020, respectively.

(2) All other assets includes mortgage servicing rights, derivative assets, and other assets (predominantly servicing advances).

(3) Prior period has been revised to conform with the current period presentation to reflect the carrying value of loans separately from all other assets.

Note 8: Securitizations and Variable Interest Entities (continued)

Consolidated VIEs

We consolidate VIEs where we are the primary beneficiary. We are the primary beneficiary of the following structure types:

COMMERCIAL AND INDUSTRIAL LOANS AND LEASES We securitize dealer floor plan loans and leases in a revolving master trust entity and hold the subordinated notes and residual equity interests. As servicer and residual interest holder, we control the key decisions of the trust and consolidate the entity. The total VIE assets held by the master trust represent a majority of the total VIE assets presented for this category in Table 8.7. In a separate transaction structure, we also provide the majority of debt and equity financing to an SPE that engages in lending and leasing to specific vendors and service the underlying collateral.

OTHER VIE STRUCTURES Other VIEs are primarily related to municipal tender option bond (MTOB) transactions and nonconforming mortgage loan securitizations that we sponsor. MTOBs are vehicles to finance the purchase of municipal bonds through the issuance of short-term debt to investors. Our involvement with MTOBs includes serving as the residual interest

holder, which provides control over the key decisions of the VIE, as well as the remarketing agent or liquidity provider related to the debt issued to investors. We also securitize nonconforming mortgage loans, in which our involvement includes servicer of the underlying assets and holder of subordinate or senior securities issued by the VIE.

Table 8.7 presents a summary of financial assets and liabilities of our consolidated VIEs. The carrying value represents assets and liabilities recorded on our consolidated balance sheet. Carrying values of assets are presented using GAAP measurement methods, which may include fair value, credit impairment or other adjustments, and therefore in some instances will differ from "Total VIE assets." For VIEs that obtain exposure synthetically through derivative instruments, the notional amount of the derivative is included in "Total VIE assets."

On our consolidated balance sheet, we separately disclose (1) the consolidated assets of certain VIEs that can only be used to settle the liabilities of those VIEs, and (2) the consolidated liabilities of certain VIEs for which the VIE creditors do not have recourse to Wells Fargo.

Table 8.7: Transactions with Consolidated VIEs

(in millions)	Total VIE assets	Carrying value – asset (liability)				
		Loans	Debt securities (1)	All other assets (2)	Long-term debt	All other liabilities (3)
March 31, 2021						
Commercial and industrial loans and leases	\$ 6,907	5,002	—	188	—	(192)
Commercial real estate loans (4)	—	—	—	—	—	—
Other	1,597	480	965	79	(192)	(899)
Total consolidated VIEs	\$ 8,504	5,482	965	267	(192)	(1,091)
December 31, 2020						
Commercial and industrial loans and leases	\$ 6,987	5,005	—	223	—	(200)
Commercial real estate loans (4)	5,369	5,357	—	12	—	—
Other	1,627	507	967	75	(203)	(900)
Total consolidated VIEs	\$ 13,983	10,869	967	310	(203)	(1,100)

(1) Includes \$269 million and \$269 million of securities classified as trading at March 31, 2021, and December 31, 2020, respectively.

(2) All other assets includes cash and due from banks, Interest-earning deposits with banks, derivative assets, equity securities, and other assets.

(3) All other liabilities includes short-term borrowings, derivative liabilities, and accrued expenses and other liabilities.

(4) For structure description, see the "Transactions with Unconsolidated VIEs" section within this Note. These consolidated VIEs were deconsolidated in first quarter 2021.

Other Transactions

In addition to the transactions included in the previous tables, we have used wholly-owned trust preferred security VIEs to issue debt securities or preferred equity exclusively to third-party investors. As the sole assets of the VIEs are receivables from us, we do not consolidate the VIEs even though we own all of the voting equity shares of the VIEs, have fully guaranteed the obligations of the VIEs, and may have the right to redeem the third-party securities under certain circumstances. In our consolidated balance sheet we reported the debt securities issued to the VIEs as long-term junior subordinated debt with a carrying value of \$710 million and \$704 million at March 31, 2021, and December 31, 2020, respectively. See Note 16 (Preferred Stock) for additional information about trust preferred securities.

Certain money market funds are also excluded from the previous tables because they are exempt from the consolidation analysis. We voluntarily waived a portion of our management fees for these money market funds to maintain a minimum level of daily net investment income. The amount of fees waived was not significant for first quarter 2021 or 2020.

Note 9: Mortgage Banking Activities

Mortgage banking activities consist of residential and commercial mortgage originations, sales and servicing.

We apply the amortization method to commercial MSR's and apply the fair value method to residential MSR's. The amortized

cost of commercial MSR's was \$1.3 billion and \$1.4 billion with an estimated fair value of \$1.7 billion and \$1.5 billion at March 31, 2021, and March 31, 2020, respectively. Table 9.1 presents the changes in MSR's measured using the fair value method.

Table 9.1: Analysis of Changes in Fair Value MSR's

(in millions)	Quarter ended March 31,	
	2021	2020
Fair value, beginning of year	\$ 6,125	11,517
Servicing from securitizations or asset transfers (1)	406	461
Sales and other (2)	(1)	(31)
Net additions	405	430
Changes in fair value:		
Due to valuation inputs or assumptions:		
Mortgage interest rates (3)	1,630	(3,022)
Servicing and foreclosure costs (4)	9	(73)
Discount rates	47	27
Prepayment estimates and other (5)	(95)	(189)
Net changes in valuation inputs or assumptions	1,591	(3,257)
Changes due to collection/realization of expected cash flows (6)	(585)	(564)
Total changes in fair value	1,006	(3,821)
Fair value, end of period	\$ 7,536	8,126

(1) Includes impacts associated with exercising cleanup calls on securitizations and our right to repurchase delinquent loans from GNMA loan securitization pools. MSR's may increase upon repurchase due to servicing liabilities associated with these delinquent GNMA loans.

(2) Includes sales and transfers of MSR's, which can result in an increase in MSR's if related to portfolios with servicing liabilities.

(3) Includes prepayment speed changes as well as other valuation changes due to changes in mortgage interest rates.

(4) Includes costs to service and unreimbursed foreclosure costs.

(5) Represents other changes in valuation model inputs or assumptions including prepayment speed estimation changes that are independent of mortgage interest rate changes.

(6) Represents the reduction in the MSR fair value for the cash flows expected to be collected during the period, net of income accreted due to the passage of time.

Table 9.2 provides key economic assumptions and sensitivity of the current fair value of residential MSR's to immediate adverse changes in those assumptions. Amounts for residential MSR's include purchased servicing rights as well as servicing

rights resulting from the transfer of loans. See Note 15 (Fair Values of Assets and Liabilities) for additional information on key economic assumptions for residential MSR's.

Table 9.2: Economic Assumptions and Sensitivity of Residential MSR's

(\$ in millions, except cost to service amounts)	Mar 31, 2021	Dec 31, 2020
Fair value of interests held	\$ 7,536	6,125
Expected weighted-average life (in years)	4.5	3.7
Key economic assumptions:		
Prepayment speed assumption	15.6 %	19.9
Impact on fair value from 10% adverse change	\$ 447	434
Impact on fair value from 25% adverse change	1,041	1,002
Discount rate assumption	6.1 %	5.8
Impact on fair value from 100 basis point increase	\$ 317	229
Impact on fair value from 200 basis point increase	608	440
Cost to service assumption (\$ per loan)	115	130
Impact on fair value from 10% adverse change	181	181
Impact on fair value from 25% adverse change	452	454

The sensitivities in the preceding table are hypothetical and caution should be exercised when relying on this data. Changes in value based on variations in assumptions generally cannot be extrapolated because the relationship of the change in the assumption to the change in value may not be linear. Also, the effect of a variation in a particular assumption on the value of the other interests held is calculated independently without changing any other assumptions. In reality, changes in one factor may

result in changes in others, which might magnify or counteract the sensitivities.

Note 9: Mortgage Banking Activities (continued)

We present the components of our managed servicing portfolio in Table 9.3 at unpaid principal balance for loans serviced and subserviced for others and at book value for owned loans serviced.

Table 9.3: Managed Servicing Portfolio

(in billions)	Mar 31, 2021	Dec 31, 2020
Residential mortgage servicing:		
Serviced and subserviced for others	\$ 804	859
Owned loans serviced	302	323
Total residential servicing	1,106	1,182
Commercial mortgage servicing:		
Serviced and subserviced for others	581	583
Owned loans serviced	122	123
Total commercial servicing	703	706
Total managed servicing portfolio	\$ 1,809	1,888
Total serviced for others, excluding subserviced for others	\$ 1,373	1,431
MSRs as a percentage of loans serviced for others	0.64 %	0.52
Weighted average note rate (mortgage loans serviced for others)	3.99	4.03

At March 31, 2021, and December 31, 2020, we had servicer advances, net of an allowance for uncollectible amounts, of \$3.3 billion and \$3.4 billion, respectively. As the servicer of loans for others, we advance certain payments of principal, interest, taxes, insurance, and default-related expenses which are generally reimbursed within a short timeframe from cash flows from the trust, GSEs, insurer or borrower. The credit risk related to these advances is limited since the reimbursement is generally senior to cash payments to investors. We also advance payments of taxes and insurance for our owned loans which are collectible

from the borrower. We maintain an allowance for uncollectible amounts for advances on loans serviced for others that may not be reimbursed if the payments were not made in accordance with applicable servicing agreements or if the insurance or servicing agreements contain limitations on reimbursements. Servicing advances on owned loans are charged-off when deemed uncollectible.

Table 9.4 presents the components of mortgage banking noninterest income.

Table 9.4: Mortgage Banking Noninterest Income

(in millions)	Quarter ended March 31,	
	2021	2020
Servicing fees:		
Contractually specified servicing fees, late charges and ancillary fees	\$ 724	865
Unreimbursed direct servicing costs (1)	(124)	(107)
Servicing fees	600	758
Amortization	(65)	(66)
Changes due to collection/realization of expected cash flows (2)	(A) (585)	(564)
Net servicing fees	(50)	128
Changes in fair value of MSR due to valuation inputs or assumptions (3)	(B) 1,591	(3,257)
Net derivative gains (losses) from economic hedges (4)	(1,640)	3,400
Market-related valuation changes to MSR, net of hedge results	(49)	143
Total servicing income (loss), net	(99)	271
Net gains on mortgage loan originations/sales (5)	1,425	108
Total mortgage banking noninterest income	\$ 1,326	379
Total changes in fair value of MSR carried at fair value	(A)+(B) \$ 1,006	(3,821)

(1) Includes costs associated with foreclosures, unreimbursed interest advances to investors, and other interest costs.

(2) Represents the reduction in the MSR fair value for the cash flows expected to be collected during the period, net of income accreted due to the passage of time.

(3) Refer to the analysis of changes in fair value MSR presented in Table 9.1 in this Note for more detail.

(4) See Note 14 (Derivatives) for additional discussion and detail on economic hedges.

(5) Includes net gains (losses) of \$1.3 billion and \$(929) million in first quarter 2021 and 2020, respectively, related to derivatives used as economic hedges of mortgage loans held for sale and derivative loan commitments.

Note 10: Intangible Assets

Table 10.1 presents the gross carrying value of intangible assets and accumulated amortization.

Table 10.1: Intangible Assets

(in millions)	March 31, 2021			December 31, 2020		
	Gross carrying value	Accumulated amortization	Net carrying value	Gross carrying value	Accumulated amortization	Net carrying value
Amortized intangible assets (1):						
MSRs (2)	\$ 4,661	(3,365)	1,296	4,612	(3,300)	1,312
Customer relationship and other intangibles	880	(572)	308	879	(551)	328
Total amortized intangible assets	\$ 5,541	(3,937)	1,604	5,491	(3,851)	1,640
Unamortized intangible assets:						
MSRs (carried at fair value) (2)	\$ 7,536			6,125		
Goodwill	26,290			26,392		
Trademark	14			14		

(1) Balances are excluded commencing in the period following full amortization.

(2) Includes a \$37 million valuation allowance recorded for amortized MSRs at both March 31, 2020, and December 31, 2020. See Note 9 (Mortgage Banking Activities) for additional information on MSRs.

Table 10.2 provides the current year and estimated future amortization expense for amortized intangible assets. We based our projections of amortization expense shown below on existing

asset balances at March 31, 2021. Future amortization expense may vary from these projections.

Table 10.2: Amortization Expense for Intangible Assets

(in millions)	Amortized MSRs	Customer relationship and other intangibles	Total
Three months ended March 31, 2021 (actual)	\$ 65	21	86
Estimate for the remainder of 2021	\$ 184	61	245
Estimate for year ended December 31,			
2022	218	68	286
2023	191	59	250
2024	166	48	214
2025	143	39	182
2026	109	32	141

In February 2021, we announced an agreement to sell Wells Fargo Asset Management and transferred the associated goodwill from the Wealth and Investment Management operating segment to Corporate. Also in first quarter 2021, we

recognized a goodwill write-down related to the sale of a portion of the student loan portfolio. Table 10.3 shows the allocation of goodwill to our reportable operating segments.

Table 10.3: Goodwill

(in millions)	Consumer Banking and Lending	Commercial Banking	Corporate and Investment Banking	Wealth and Investment Management	Corporate	Consolidated Company
December 31, 2020	\$ 16,418	3,018	5,375	1,276	305	26,392

Foreign currency translation	—	2	—	—	—	2
Transfers of goodwill	—	—	—	(932)	932	—
March 31, 2021	\$ 16,418	3,020	5,375	344	1,133	26,290

Note 11: Guarantees and Other Commitments

Guarantees are contracts that contingently require us to make payments to a guaranteed party based on an event or a change in an underlying asset, liability, rate or index. Guarantees are generally in the form of standby and direct pay letters of credit,

written options, recourse obligations, and other types of similar arrangements. Table 11.1 shows carrying value, maximum exposure to loss on our guarantees and the related non-investment grade amounts.

Table 11.1: Guarantees – Carrying Value and Maximum Exposure to Loss

(in millions)	Carrying value of obligation (asset)	Maximum exposure to loss						
		Expires in one year or less	Expires after one year through three years	Expires after three years through five years	Expires after five years	Total	Non-investment grade	
March 31, 2021								
Standby letters of credit	\$ 145	12,184	4,672	1,692	439	18,987	7,097	
Direct pay letters of credit	14	2,394	2,565	524	54	5,537	1,093	
Written options (1)	(554)	11,965	7,794	755	58	20,572	13,757	
Loans and LHFS sold with recourse (2)	33	199	848	2,922	9,484	13,453	11,221	
Exchange and clearing house guarantees	—	—	—	—	7,163	7,163	—	
Other guarantees and indemnifications (3)	—	623	3	—	306	932	577	
Total guarantees	\$ (362)	27,365	15,882	5,893	17,504	66,644	33,745	
December 31, 2020								
Standby letters of credit	\$ 156	11,977	4,962	1,897	433	19,269	7,528	
Direct pay letters of credit	18	2,256	2,746	531	39	5,572	1,102	
Written options (1)	(538)	12,735	7,972	889	58	21,654	13,394	
Loans and LHFS sold with recourse (2)	33	177	819	1,870	9,723	12,589	10,332	
Exchange and clearing house guarantees	—	—	—	—	5,510	5,510	—	
Other guarantees and indemnifications (3)	—	734	1	1	1,414	2,150	590	
Total guarantees	\$ (331)	27,879	16,500	5,188	17,177	66,744	32,946	

- (1) Written options, which are in the form of derivatives, are also included in the derivative disclosures in Note 14 (Derivatives). Carrying value net asset position is a result of certain deferred premium option trades.
- (2) Represent recourse provided, all to the GSEs, on loans sold under various programs and arrangements.
- (3) Includes indemnifications provided to certain third-party clearing agents. Estimated maximum exposure to loss was \$277 million and \$1.4 billion with related collateral of \$2.0 billion and \$1.2 billion as of March 31, 2021 and December 31, 2020, respectively.

“Maximum exposure to loss” and “Non-investment grade” are required disclosures under GAAP. Maximum exposure to loss represents the estimated loss that would be incurred under an assumed hypothetical circumstance, despite what we believe is a remote possibility, where the value of our interests and any associated collateral declines to zero. Maximum exposure to loss estimates in Table 11.1 do not reflect economic hedges or collateral we could use to offset or recover losses we may incur under our guarantee agreements. Accordingly, this required disclosure is not an indication of expected loss. We believe the carrying value is more representative of our exposure to loss than maximum exposure to loss. The carrying value represents the fair value of the guarantee, if any, and also includes an ACL for guarantees, if applicable.

Non-investment grade represents those guarantees on which we have a higher risk of performance under the terms of the guarantee. If the underlying assets under the guarantee are non-investment grade (that is, an external rating that is below investment grade or an internal credit default grade that is equivalent to a below investment grade external rating), we consider the risk of performance to be high. Internal credit default grades are determined based upon the same credit policies that we use to evaluate the risk of payment or performance when making loans and other extensions of credit. Credit quality indicators we usually consider in evaluating risk of payments or performance are described in Note 4 (Loans and Related Allowance for Credit Losses).

MERCHANT PROCESSING SERVICES We provide debit and credit card transaction processing services through payment networks directly for merchants and as a sponsor for merchant processing servicers, including our joint venture with a third party that is accounted for as an equity method investment. In our role as the merchant acquiring bank, we have a potential obligation in connection with payment and delivery disputes between the merchant and the cardholder that are resolved in favor of the cardholder. If we are unable to collect the amounts from the merchant, we incur a loss for the refund to the cardholder. We are secondarily obligated to make a refund for transactions involving sponsored merchant processing servicers. We generally have a low likelihood of loss in connection with our merchant processing services because most products and services are delivered when purchased and amounts are generally refunded when items are returned to the merchant. In addition, we may reduce our risk in connection with these transactions by withholding future payments and requiring cash or other collateral. For first quarter 2021, we processed card transaction volume of \$372.5 billion as a merchant acquiring bank, and related losses, including those from our joint venture entity, were immaterial.

GUARANTEES OF SUBSIDIARIES In the normal course of business, the Parent may provide counterparties with guarantees related to its subsidiaries' obligations. These obligations are included in the Company's consolidated balance sheet or are reflected as off-balance sheet commitments, and therefore, the Parent has not recognized a separate liability for these guarantees.

The Parent fully and unconditionally guarantees the payment of principal, interest, and any other amounts that may be due on securities that its 100% owned finance subsidiary, Wells Fargo Finance LLC, may issue. These securities are not guaranteed by any other subsidiary of the Parent. The guaranteed liabilities were \$1.8 billion and \$2.3 billion at March 31, 2021, and December 31, 2020, respectively. These guarantees rank on parity with all of the Parent's other unsecured and unsubordinated indebtedness. The assets of the Parent consist primarily of equity in its subsidiaries, and the Parent is a separate and distinct legal entity from its subsidiaries. As a result, the Parent's ability to address claims of holders of these debt securities against the Parent under the guarantee depends on the Parent's receipt of dividends, loan payments and other funds from its subsidiaries. If any of the Parent's subsidiaries becomes insolvent, the direct creditors of that subsidiary will have a prior claim on that subsidiary's assets. The rights of the Parent and the rights of the Parent's creditors will be subject to that prior claim unless the Parent is also a direct creditor of that subsidiary. For additional information regarding other restrictions on the Parent's ability to receive dividends, loan payments and other funds from its subsidiaries, see Note 23 (Regulatory Capital Requirements and Other Restrictions).

OTHER COMMITMENTS To meet the financing needs of our customers, we may enter into commitments to purchase debt and equity securities to provide capital for their funding, liquidity or other future needs. As of both March 31, 2021, and December 31, 2020, we had commitments to purchase debt securities of \$18 million and commitments to purchase equity securities of \$3.1 billion and \$3.2 billion, respectively.

As part of maintaining our memberships in certain clearing organizations, we are required to stand ready to provide liquidity to sustain market clearing activity in the event unforeseen events occur or are deemed likely to occur. Certain of these obligations are guarantees of other members' performance and accordingly are included in Table 11.1 in Other guarantees and indemnifications.

Also, we have commitments to purchase loans and securities under resale agreements from certain counterparties, including central clearing organizations. The amount of our unfunded contractual commitments was \$8.7 billion and \$12.0 billion as of March 31, 2021, and December 31, 2020, respectively.

Given the nature of these commitments, they are excluded from Table 4.4 (Unfunded Credit Commitments) in Note 4 (Loans and Related Allowance for Credit Losses).

Note 12: Pledged Assets and Collateral

Pledged Assets

Table 12.1 provides the carrying amount of on-balance sheet pledged assets and the fair value of other pledged collateral. Other pledged collateral is collateral we have received from third parties, have the right to repledge and is not recognized on our consolidated balance sheet.

TRADING RELATED ACTIVITY Our trading businesses may pledge debt and equity securities in connection with securities sold under agreements to repurchase (repurchase agreements) and securities lending arrangements. The collateral that we pledge related to our trading activities may include our own collateral as well as collateral that we have received from third parties and have the right to repledge. All of the trading activity pledged collateral is eligible to be repledged or sold by the secured party.

NON-TRADING RELATED ACTIVITY As part of our liquidity management strategy, we may pledge loans, debt securities, and

other financial assets to secure trust and public deposits, borrowings and letters of credit from the Federal Home Loan Bank (FHLB) and the Board of Governors of the Federal Reserve System (FRB) and for other purposes as required or permitted by law or insurance statutory requirements. Substantially all of the non-trading activity pledged collateral is not eligible to be repledged or sold by the secured party.

VIE RELATED We pledge assets in connection with various types of transactions entered into with VIEs. These pledged assets can only be used to settle the liabilities of those entities.

We also have loans recorded on our consolidated balance sheet which represent certain delinquent loans that are eligible for repurchase from GNMA loan securitizations. See Note 8 (Securitizations and Variable Interest Entities) for additional information on consolidated VIE assets.

Table 12.1: Pledged Assets

(in millions)	Mar 31, 2021	Dec 31, 2020
Related to trading activities:		
Repledged third-party owned debt and equity securities	\$ 51,214	44,765
Trading debt securities and other	20,805	19,572
Equity securities	716	470
Total pledged assets related to trading activities	72,735	64,807
Related to non-trading activities:		
Loans	313,479	344,220
Debt securities:		
Available-for-sale	52,487	57,289
Held-to-maturity	13,318	17,290
Other financial assets	727	230
Total pledged assets related to non-trading activities	380,011	419,029
Related to VIEs:		
Consolidated VIE assets	6,714	12,146
Loans eligible for repurchase from GNMA securitizations	135	179
Total pledged assets related to VIEs	6,849	12,325
Total pledged assets	\$ 459,595	496,161

Securities Financing Activities

We enter into resale and repurchase agreements and securities borrowing and lending agreements (collectively, “securities financing activities”) typically to finance trading positions (including securities and derivatives), acquire securities to cover short trading positions, accommodate customers’ financing needs, and settle other securities obligations. These activities are conducted through our broker-dealer subsidiaries and, to a lesser extent, through other bank entities. Our securities financing activities primarily involve high-quality, liquid securities such as U.S. Treasury securities and government agency securities and, to a lesser extent, less liquid securities, including equity securities, corporate bonds and asset-backed securities. We account for these transactions as collateralized financings in which we typically receive or pledge securities as collateral. We believe these financing transactions generally do not have material credit risk given the collateral provided and the related monitoring processes.

OFFSETTING OF SECURITIES FINANCING ACTIVITIES Table 12.2 presents resale and repurchase agreements subject to master repurchase agreements (MRA) and securities borrowing and lending agreements subject to master securities lending agreements (MSLA). Collateralized financings, and those with a single counterparty, are presented net on our consolidated balance sheet, provided certain criteria are met that permit balance sheet netting. Substantially all transactions subject to these agreements do not meet those criteria and thus are not eligible for balance sheet netting.

Collateral we pledged consists of non-cash instruments, such as securities or loans, and is not netted on the consolidated balance sheet against the related liability. Collateral we received includes securities or loans and is not recognized on our consolidated balance sheet. Collateral pledged or received may be increased or decreased over time to maintain certain contractual thresholds, as the assets underlying each arrangement fluctuate in value. Generally, these agreements require collateral to exceed the asset or liability recognized on the balance sheet. The following table includes the amount of

collateral pledged or received related to exposures subject to enforceable MRAs or MSLAs. While these agreements are typically over-collateralized, U.S. GAAP requires disclosure in this table to limit the reported amount of such collateral to the amount of the related recognized asset or liability for each counterparty.

In addition to the amounts included in Table 12.2, we also have balance sheet netting related to derivatives that is disclosed in Note 14 (Derivatives).

Table 12.2: Offsetting – Securities Financing Activities

(in millions)	Mar 31, 2021	Dec 31, 2020
Assets:		
Resale and securities borrowing agreements		
Gross amounts recognized	\$ 113,611	92,446
Gross amounts offset in consolidated balance sheet (1)	(16,480)	(11,513)
Net amounts in consolidated balance sheet (2)	97,131	80,933
Collateral not recognized in consolidated balance sheet (3)	(96,386)	(80,158)
Net amount (4)	\$ 745	775
Liabilities:		
Repurchase and securities lending agreements		
Gross amounts recognized	\$ 63,062	57,622
Gross amounts offset in consolidated balance sheet (1)	(16,480)	(11,513)
Net amounts in consolidated balance sheet (5)	46,582	46,109
Collateral pledged but not netted in consolidated balance sheet (6)	(46,371)	(45,819)
Net amount (4)	\$ 211	290

(1) Represents recognized amount of resale and repurchase agreements with counterparties subject to enforceable MRAs that have been offset in the consolidated balance sheet.

(2) Includes \$79.4 billion and \$65.6 billion classified on our consolidated balance sheet in federal funds sold and securities purchased under resale agreements at March 31, 2021, and December 31, 2020, respectively. Also includes securities purchased under long-term resale agreements (generally one year or more) classified in loans, which totaled \$17.7 billion and \$15.3 billion, at March 31, 2021, and December 31, 2020, respectively.

(3) Represents the fair value of collateral we have received under enforceable MRAs or MSLAs, limited in the table above to the amount of the recognized asset due from each counterparty. At March 31, 2021, and December 31, 2020, we have received total collateral with a fair value of \$131.2 billion and \$108.5 billion, respectively, all of which we have the right to sell or repledge. These amounts include securities we have sold or repledged to others with a fair value of \$47.2 billion and \$36.1 billion at March 31, 2021, and December 31, 2020, respectively.

(4) Represents the amount of our exposure (assets) or obligation (liabilities) that is not collateralized and/or is not subject to an enforceable MRA or MSLA.

(5) Amount is classified in short-term borrowings on our consolidated balance sheet.

(6) Represents the fair value of collateral we have pledged, related to enforceable MRAs or MSLAs, limited in the table above to the amount of the recognized liability owed to each counterparty. At March 31, 2021, and December 31, 2020, we have pledged total collateral with a fair value of \$64.6 billion and \$59.2 billion, respectively, substantially all of which may be sold or repledged by the counterparty.

REPURCHASE AND SECURITIES LENDING AGREEMENTS Securities sold under repurchase agreements and securities lending arrangements are effectively short-term collateralized borrowings. In these transactions, we receive cash in exchange for transferring securities as collateral and recognize an obligation to reacquire the securities for cash at the transaction's maturity. These types of transactions create risks, including (1) the counterparty may fail to return the securities at maturity, (2) the fair value of the securities transferred may decline below the amount of our obligation to reacquire the securities, and therefore create an obligation for us to pledge additional amounts, and (3) the counterparty may accelerate the maturity on demand, requiring us to reacquire the security prior to contractual maturity. We attempt to mitigate these risks in various ways. Our collateral primarily consists of highly liquid securities. In addition, we underwrite and monitor the financial strength of our counterparties, monitor the fair value of collateral pledged relative to contractually required repurchase amounts, and monitor that our collateral is properly returned through the clearing and settlement process in advance of our cash repayment. Table 12.3 provides the gross amounts recognized on the consolidated balance sheet (before the effects of offsetting) of our liabilities for repurchase and securities lending agreements disaggregated by underlying collateral type.

Note 12: Pledged Assets and Collateral (continued)

Table 12.3: Gross Obligations by Underlying Collateral Type

(in millions)		Mar 31, 2021	Dec 31, 2020
Repurchase agreements:			
Securities of U.S. Treasury and federal agencies	\$	28,507	22,922
Securities of U.S. States and political subdivisions		9	4
Federal agency mortgage-backed securities		12,678	15,353
Non-agency mortgage-backed securities		1,007	1,069
Corporate debt securities		10,291	9,944
Asset-backed securities		1,072	1,054
Equity securities		1,211	1,500
Other		683	336
Total repurchases		55,458	52,182
Securities lending arrangements:			
Securities of U.S. Treasury and federal agencies		19	64
Federal agency mortgage-backed securities		53	23
Corporate debt securities		38	79
Equity securities (1)		7,375	5,189
Other		119	85
Total securities lending		7,604	5,440
Total repurchases and securities lending	\$	63,062	57,622

(1) Equity securities are generally exchange traded and represent collateral received from third parties that has been repledged. We received the collateral through either margin lending agreements or contemporaneous securities borrowing transactions with other counterparties.

Table 12.4 provides the contractual maturities of our gross obligations under repurchase and securities lending agreements.

Table 12.4: Contractual Maturities of Gross Obligations

(in millions)		Overnight/ continuous	Up to 30 days	30-90 days	>90 days	Total gross obligation
March 31, 2021						
Repurchase agreements	\$	41,585	3,483	5,025	5,365	55,458
Securities lending arrangements		6,804	200	600	—	7,604
Total repurchases and securities lending (1)	\$	48,389	3,683	5,625	5,365	63,062
December 31, 2020						
Repurchase agreements	\$	36,946	5,251	5,100	4,885	52,182
Securities lending arrangements		4,690	400	350	—	5,440
Total repurchases and securities lending (1)	\$	41,636	5,651	5,450	4,885	57,622

(1) Securities lending is executed under agreements that allow either party to terminate the transaction without notice, while repurchase agreements have a term structure to them that technically matures at a point in time. The overnight/continuous repurchase agreements require election of both parties to roll the trade rather than the election to terminate the arrangement as in securities lending.

Note 13: Legal Actions

Wells Fargo and certain of our subsidiaries are involved in a number of judicial, regulatory, governmental, arbitration, and other proceedings or investigations concerning matters arising from the conduct of our business activities, and many of those proceedings and investigations expose Wells Fargo to potential financial loss. These proceedings and investigations include actions brought against Wells Fargo and/or our subsidiaries with respect to corporate-related matters and transactions in which Wells Fargo and/or our subsidiaries were involved. In addition, Wells Fargo and our subsidiaries may be requested to provide information or otherwise cooperate with government authorities in the conduct of investigations of other persons or industry groups.

Although there can be no assurance as to the ultimate outcome, Wells Fargo and/or our subsidiaries have generally denied, or believe we have a meritorious defense and will deny, liability in all significant legal actions pending against us, including the matters described below, and we intend to defend vigorously each case, other than matters we describe as having settled. We establish accruals for legal actions when potential losses associated with the actions become probable and the costs can be reasonably estimated. For such accruals, we record the amount we consider to be the best estimate within a range of potential losses that are both probable and estimable; however, if we cannot determine a best estimate, then we record the low end of the range of those potential losses. The actual costs of resolving legal actions may be substantially higher or lower than the amounts accrued for those actions.

ATM ACCESS FEE LITIGATION In October 2011, plaintiffs filed a putative class action, *Mackmin, et al. v. Visa, Inc. et al.*, against Wells Fargo & Company, Wells Fargo Bank, N.A., Visa, MasterCard, and several other banks in the United States District Court for the District of Columbia. Plaintiffs allege that the Visa and MasterCard requirement that if an ATM operator charges an access fee on Visa and MasterCard transactions, then that fee cannot be greater than the access fee charged for transactions on other networks, violates antitrust rules. Plaintiffs seek treble damages, restitution, injunctive relief, and attorneys' fees where available under federal and state law. Two other antitrust cases that make similar allegations were filed in the same court, but these cases did not name Wells Fargo as a defendant. On February 13, 2013, the district court granted defendants' motions to dismiss the three actions. Plaintiffs appealed the dismissals and, on August 4, 2015, the United States Court of Appeals for the District of Columbia Circuit vacated the district court's decisions and remanded the three cases to the district court for further proceedings. On June 28, 2016, the United States Supreme Court granted defendants' petitions for writ of certiorari to review the decisions of the United States Court of Appeals for the District of Columbia. On November 17, 2016, the United States Supreme Court dismissed the petitions as improvidently granted, and the three cases returned to the district court for further proceedings. The Company has entered into an agreement pursuant to which the Company will pay \$20.8 million to resolve the cases, subject to court approval.

AUTOMOBILE LENDING MATTERS On April 20, 2018, the Company entered into consent orders with the Office of the Comptroller of the Currency (OCC) and the Consumer Financial Protection Bureau (CFPB) to resolve, among other things, investigations by the agencies into the Company's compliance risk management

program and its past practices involving certain automobile collateral protection insurance (CPI) policies and certain mortgage interest rate lock extensions. The consent orders require remediation to customers and the payment of a total of \$1.0 billion in civil money penalties to the agencies. In July 2017, the Company announced a plan to remediate customers who may have been financially harmed due to issues related to automobile CPI policies purchased through a third-party vendor on their behalf. Multiple putative class actions alleging, among other things, unfair and deceptive practices relating to these CPI policies, have been filed against the Company and consolidated into one multi-district litigation in the United States District Court for the Central District of California. The Company has reached an agreement to resolve the multi-district litigation pursuant to which the Company has agreed to pay, consistent with its remediation obligations under the consent orders, approximately \$693 million in remediation to customers with CPI policies placed between October 15, 2005, and September 30, 2016. The settlement amount is not incremental to the Company's remediation obligations under the consent orders, but instead encompasses those obligations, including remediation payments to date. The settlement amount is subject to change as the Company finalizes its remediation activity under the consent orders. In addition, the Company has agreed to contribute \$1 million to a common fund for the class. The district court granted final approval of the settlement on November 21, 2019. Shareholders also filed a putative securities fraud class action against the Company and its executive officers alleging material misstatements and omissions of CPI-related information in the Company's public disclosures. In January 2020, the court dismissed this action as to all defendants except the Company and a former executive officer and limited the action to two alleged misstatements. In addition, the Company is subject to a class action in the United States District Court for the Central District of California alleging that customers are entitled to refunds related to the unused portion of guaranteed automobile protection (GAP) waiver or insurance agreements between the customer and dealer and, by assignment, the lender. Allegations related to the CPI and GAP programs are among the subjects of a shareholder derivative lawsuit pending in the United States District Court for the Northern District of California. These and other issues related to the origination, servicing, and collection of consumer auto loans, including related insurance products, have also subjected the Company to formal or informal inquiries, investigations, or examinations from federal and state government agencies, including the CFPB. In December 2018, the Company entered into an agreement with all 50 state Attorneys General and the District of Columbia to resolve an investigation into the Company's retail sales practices, CPI and GAP, and mortgage interest rate lock matters, pursuant to which the Company paid \$575 million.

COMMERCIAL LENDING SHAREHOLDER LITIGATION In October and November 2020, plaintiffs filed two putative securities fraud class actions in the United States District Court for the Northern District of California alleging that the Company and certain of its former executive officers made false and misleading statements or omissions regarding, among other things, the Company's commercial lending underwriting practices, the credit quality of its commercial credit portfolios, and the value of its commercial loans, collateralized loan obligations and commercial mortgage-backed securities.

Note 13: Legal Actions (continued)

CONSENT ORDER DISCLOSURE LITIGATION Wells Fargo shareholders have brought a putative securities fraud class action in the United States District Court for the Southern District of New York alleging that the Company and certain of its current and former executive officers and directors made false or misleading statements regarding the Company's efforts to comply with the February 2018 consent order with the Federal Reserve Board and the April 2018 consent orders with the CFPB and OCC. Allegations related to the Company's efforts to comply with these three consent orders are also among the subjects of a shareholder derivative lawsuit pending in the United States District Court for the Northern District of California.

CONSUMER DEPOSIT ACCOUNT RELATED REGULATORY INVESTIGATIONS The CFPB is conducting an investigation into whether customers were unduly harmed by the Company's historical practices associated with the freezing (and, in many cases, closing) of consumer deposit accounts after the Company detected suspected fraudulent activity (by third parties or account holders) that affected those accounts. The CFPB is also investigating certain of the Company's past disclosures to customers regarding the minimum qualifying debit card usage required for customers to receive a waiver of monthly service fees on certain consumer deposit accounts.

CORONAVIRUS AID, RELIEF, AND ECONOMIC SECURITY ACT/ PAYCHECK PROTECTION PROGRAM Plaintiffs filed putative class actions in various federal courts against the Company. The actions sought damages and injunctive relief related to the Company's offering of Paycheck Protection Program (PPP) loans under the Coronavirus Aid, Relief, and Economic Security Act, as well as claims for fees by purported agents who allegedly assisted customers with preparing PPP loan applications submitted to the Company. These actions have been dismissed or, in a limited number of cases, are proceeding on an individual basis. The Company has also received formal and informal inquiries from federal and state government agencies regarding its offering of PPP loans.

FOREIGN EXCHANGE BUSINESS The United States Department of Justice (Department of Justice) is investigating certain activities in the Company's foreign exchange business, including whether customers may have received pricing inconsistent with commitments made to those customers. Previous investigations by other federal government agencies have been resolved.

INTERCHANGE LITIGATION Plaintiffs representing a class of merchants have filed putative class actions, and individual merchants have filed individual actions, against Wells Fargo Bank, N.A., Wells Fargo & Company, Wachovia Bank, N.A., and Wachovia Corporation regarding the interchange fees associated with Visa and MasterCard payment card transactions. Visa, MasterCard, and several other banks and bank holding companies are also named as defendants in these actions. These actions have been consolidated in the United States District Court for the Eastern District of New York. The amended and consolidated complaint asserts claims against defendants based on alleged violations of federal and state antitrust laws and seeks damages, as well as injunctive relief. Plaintiff merchants allege that Visa, MasterCard, and payment card issuing banks unlawfully colluded to set interchange rates. Plaintiffs also allege that enforcement of certain Visa and MasterCard rules and alleged tying and bundling of services offered to merchants are anticompetitive. Wells Fargo and Wachovia, along with other defendants and entities, are parties to Loss and Judgment

Sharing Agreements, which provide that they, along with other entities, will share, based on a formula, in any losses from the Interchange Litigation. On July 13, 2012, Visa, MasterCard, and the financial institution defendants, including Wells Fargo, signed a memorandum of understanding with plaintiff merchants to resolve the consolidated class action and reached a separate settlement in principle of the consolidated individual actions. The settlement payments to be made by all defendants in the consolidated class and individual actions totaled approximately \$6.6 billion before reductions applicable to certain merchants opting out of the settlement. The class settlement also provided for the distribution to class merchants of 10 basis points of default interchange across all credit rate categories for a period of eight consecutive months. The district court granted final approval of the settlement, which was appealed to the United States Court of Appeals for the Second Circuit by settlement objector merchants. Other merchants opted out of the settlement and are pursuing several individual actions. On June 30, 2016, the Second Circuit vacated the settlement agreement and reversed and remanded the consolidated action to the United States District Court for the Eastern District of New York for further proceedings. On November 23, 2016, prior class counsel filed a petition to the United States Supreme Court, seeking review of the reversal of the settlement by the Second Circuit, and the Supreme Court denied the petition on March 27, 2017. On November 30, 2016, the district court appointed lead class counsel for a damages class and an equitable relief class. The parties have entered into a settlement agreement to resolve the money damages class claims pursuant to which defendants will pay a total of approximately \$6.2 billion, which includes approximately \$5.3 billion of funds remaining from the 2012 settlement and \$900 million in additional funding. The Company's allocated responsibility for the additional funding is approximately \$94.5 million. The court granted final approval of the settlement on December 13, 2019, which was appealed to the United States Court of Appeals for the Second Circuit by settlement objector merchants. Several of the opt-out and direct action litigations have been settled while others remain pending.

LOW INCOME HOUSING TAX CREDITS Federal government agencies have undertaken formal or informal inquiries or investigations regarding the manner in which the Company purchased, and negotiated the purchase of, certain federal low income housing tax credits in connection with the financing of low income housing developments.

MORTGAGE LOAN MODIFICATION MATTERS Plaintiffs representing a class of mortgage borrowers have filed separate putative class actions, *Hernandez v. Wells Fargo, et al.*, *Coordes v. Wells Fargo, et al.*, *Ryder v. Wells Fargo*, *Liguori v. Wells Fargo*, and *Dore v. Wells Fargo*, against Wells Fargo Bank, N.A., in the United States District Court for the Northern District of California, the United States District Court for the District of Washington, the United States District Court for the Southern District of Ohio, the United States District Court for the Southern District of New York, and the United States District Court for the Western District of Pennsylvania, respectively. Plaintiffs allege that Wells Fargo improperly denied mortgage loan modifications or repayment plans to customers in the foreclosure process due to the overstatement of foreclosure attorneys' fees that were included for purposes of determining whether a customer in the foreclosure process qualified for a mortgage loan modification or repayment plan. In March 2020, the Company entered into an agreement pursuant to which the Company paid \$18.5 million to resolve the claims of the initial certified class in the *Hernandez*

case, which was approved by the district court in October 2020. The *Hernandez* settlement has been reopened to include additional borrowers who the Company determined should have been included in the settlement class because the Company identified a population of additional borrowers during the relevant class period whose loans had not previously been reviewed for inclusion in the original population of impacted customers. The identification of these additional borrowers will increase the potential class of mortgage borrowers in the other pending matters. In addition, federal banking regulators and other government agencies have undertaken formal or informal inquiries or investigations regarding these and other mortgage servicing matters.

NOMURA/NATIXIS MORTGAGE-RELATED LITIGATION In August 2014 and August 2015, Nomura Credit & Capital Inc. (Nomura) and Natixis Real Estate Holdings, LLC (Natixis) filed a total of seven third-party complaints against Wells Fargo Bank, N.A., in New York state court. In the underlying first-party actions, Nomura and Natixis have been sued for alleged breaches of representations and warranties made in connection with residential mortgage-backed securities sponsored by them. In the third-party actions, Nomura and Natixis allege that Wells Fargo, as master servicer, primary servicer or securities administrator, failed to notify Nomura and Natixis of their own breaches, failed to properly oversee the primary servicers, and failed to adhere to accepted servicing practices. Natixis additionally alleges that Wells Fargo failed to perform default oversight duties. Wells Fargo has asserted counterclaims alleging that Nomura and Natixis failed to provide Wells Fargo notice of their representation and warranty breaches.

OFAC RELATED INVESTIGATION The Company has self-identified an issue whereby certain foreign banks utilized a Wells Fargo software-based solution to conduct import/export trade-related financing transactions with countries and entities prohibited by the Office of Foreign Assets Control (OFAC) of the United States Department of the Treasury. We do not believe any funds related to these transactions flowed through accounts at Wells Fargo as a result of the aforementioned conduct. The Company has made voluntary self-disclosures to OFAC and is cooperating with an inquiry from the Department of Justice.

ORDER OF POSTING LITIGATION Plaintiffs filed a series of putative class actions against Wachovia Bank, N.A., and Wells Fargo Bank, N.A., as well as many other banks, challenging the “high to low” order in which the banks post debit card transactions to consumer deposit accounts. Most of these actions were consolidated in multi-district litigation proceedings (MDL proceedings) in the United States District Court for the Southern District of Florida. The court in the MDL proceedings has certified a class of putative plaintiffs, and Wells Fargo moved to compel arbitration of the claims of unnamed class members. The court denied the motions to compel arbitration in October 2016, and Wells Fargo appealed this decision to the United States Court of Appeals for the Eleventh Circuit. In May 2018, the Eleventh Circuit ruled in Wells Fargo’s favor and found that Wells Fargo had not waived its arbitration rights and remanded the case to the district court for further proceedings. On September 26, 2019, the district court entered an order granting Wells Fargo’s motion and dismissed the claims of unnamed class members in favor of arbitration, which was appealed by plaintiffs to the United States Court of Appeals for the Eleventh Circuit. In April 2021, the Eleventh Circuit upheld the district court’s decision.

RETAIL SALES PRACTICES MATTERS A number of bodies or entities, including (a) federal, state, and local government agencies, including the Department of Justice, the United States Securities and Exchange Commission (SEC), and the United States Department of Labor, (b) state attorneys general, including the New York Attorney General, and (c) Congressional committees, have undertaken formal or informal inquiries, investigations, or examinations arising out of certain retail sales practices of the Company that were the subject of settlements with the CFPB, the OCC, and the Office of the Los Angeles City Attorney announced by the Company on September 8, 2016. The Company has responded to requests from certain of the foregoing. As previously disclosed, the Company entered into agreements to resolve the state attorneys general investigations. On February 21, 2020, the Company entered into an agreement with the Department of Justice to resolve the Department of Justice’s criminal investigation into the Company’s retail sales practices, as well as a separate agreement to resolve the Department of Justice’s civil investigation. As part of the Department of Justice criminal settlement, no charges will be filed against the Company provided the Company abides by all the terms of the agreement. The Department of Justice criminal settlement also includes the Company’s agreement that the facts set forth in the settlement document constitute sufficient facts for the finding of criminal violations of statutes regarding bank records and personal information. On February 21, 2020, the Company also entered into an order to resolve the SEC’s investigation arising out of the Company’s retail sales practices. The SEC order contains a finding, to which the Company consented, that the facts set forth include violations of Section 10(b) of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder. As part of the resolution of the Department of Justice and SEC investigations, the Company made payments totaling \$3.0 billion. In addition, as part of the settlements and included in the \$3.0 billion amount, the Company agreed to the creation of a \$500 million Fair Fund for the benefit of investors who were harmed by the conduct covered in the SEC settlement.

In addition, a number of lawsuits were filed by non-governmental parties seeking damages or other remedies related to these retail sales practices. As previously disclosed, the Company entered into various settlements to resolve these lawsuits. A purported Employee Retirement Income Security Act (ERISA) class action was filed in the United States District Court for the District of Minnesota on behalf of 401(k) plan participants. The district court dismissed the action, and on July 27, 2020, the United States Court of Appeals for the Eighth Circuit affirmed the dismissal. The 401(k) plan participants filed a writ of certiorari to the United States Supreme Court, which was denied on May 3, 2021.

RMBS TRUSTEE LITIGATION In December 2014, Phoenix Light SF Limited and certain related entities and the National Credit Union Administration (NCUA) filed complaints in the United States District Court for the Southern District of New York against Wells Fargo Bank, N.A., alleging claims against the Company in its capacity as trustee for a number of residential mortgage-backed securities trusts. Complaints raising similar allegations have been filed by Commerzbank AG in the Southern District of New York and by IKB International and IKB Deutsche Industriebank in New York state court. In each case, the plaintiffs allege that Wells Fargo Bank, N.A., as trustee, caused losses to investors, and plaintiffs assert causes of action based upon, among other things, the trustee’s alleged failure to notify and enforce repurchase obligations of mortgage loan sellers for purported breaches of representations and warranties, notify investors of

Note 13: Legal Actions (continued)

alleged events of default, and abide by appropriate standards of care following alleged events of default. The Company previously settled two class actions with similar allegations that were filed in November 2014 and December 2016 by institutional investors in the Southern District of New York and New York state court, respectively. In March 2021, the Company entered into an agreement to resolve the case filed by the NCUA.

SEMINOLE TRIBE TRUSTEE LITIGATION The Seminole Tribe of Florida filed a complaint in Florida state court alleging that Wells Fargo, as trustee, charged excess fees in connection with the administration of a minor's trust and failed to invest the assets of the trust prudently. The complaint was later amended to include three individual current and former beneficiaries as plaintiffs and to remove the Tribe as a party to the case. In December 2016, the Company filed a motion to dismiss the amended complaint on the grounds that the Tribe is a necessary party and that the individual beneficiaries lack standing to bring claims. The motion was denied in June 2018. The case is pending trial.

OUTLOOK As described above, the Company establishes accruals for legal actions when potential losses associated with the actions become probable and the costs can be reasonably estimated. The high end of the range of reasonably possible potential losses in excess of the Company's accrual for probable and estimable losses was approximately \$2.6 billion as of March 31, 2021. The outcomes of legal actions are unpredictable and subject to significant uncertainties, and it is inherently difficult to determine whether any loss is probable or even possible. It is also inherently difficult to estimate the amount of any loss and there may be matters for which a loss is probable or reasonably possible but not currently estimable. Accordingly, actual losses may be in excess of the established accrual or the range of reasonably possible loss. Based on information currently available, advice of counsel, available insurance coverage, and established reserves, Wells Fargo believes that the eventual outcome of the actions against Wells Fargo and/or its subsidiaries will not, individually or in the aggregate, have a material adverse effect on Wells Fargo's consolidated financial condition. However, it is possible that the ultimate resolution of a matter, if unfavorable, may be material to Wells Fargo's results of operations for any particular period.

Note 14: Derivatives

We use derivatives to manage exposure to market risk, including interest rate risk, credit risk and foreign currency risk, and to assist customers with their risk management objectives. We designate certain derivatives as hedging instruments in qualifying hedge accounting relationships (fair value or cash flow hedges). Our remaining derivatives consist of economic hedges that do not qualify for hedge accounting and derivatives held for customer accommodation trading or other purposes. For additional information on our derivative activities, see Note 16 (Derivatives) in our 2020 Form 10-K.

Table 14.1 presents the total notional or contractual amounts and fair values for our derivatives. Derivative transactions can be measured in terms of the notional amount, but this amount is not recorded on our consolidated balance sheet and is not, when viewed in isolation, a meaningful measure of the risk profile of the instruments. The notional amount is generally not exchanged, but is used only as the basis on which interest and other payments are determined.

Table 14.1: Notional or Contractual Amounts and Fair Values of Derivatives

(in millions)	March 31, 2021			December 31, 2020

Total derivatives before netting		65,949	54,071		65,682	58,065
Netting		(40,520)	(39,141)		(39,836)	(41,556)
Total	\$	25,429	14,930		25,846	16,509

Table 14.2 provides information on the gross fair values of derivative assets and liabilities, the balance sheet netting adjustments and the resulting net fair value amount recorded on our consolidated balance sheet, as well as the non-cash collateral associated with such arrangements. We execute substantially all of our derivative transactions under master netting arrangements and reflect all derivative balances and related cash collateral subject to enforceable master netting arrangements on a net basis within the consolidated balance sheet. The "Gross amounts recognized" column in the following table includes \$55.9 billion and \$48.0 billion of gross derivative assets and liabilities, respectively, at March 31, 2021, and \$54.6 billion and \$50.1 billion, respectively, at December 31, 2020, with counterparties subject to enforceable master netting arrangements that are eligible for balance sheet netting adjustments. The majority of these amounts are interest rate contracts executed in over-the-counter (OTC) markets. The remaining gross derivative assets and liabilities of \$10.0 billion and \$6.1 billion, respectively, at March 31, 2021, and \$11.1 billion

and \$8.0 billion, respectively, at December 31, 2020, include those with counterparties subject to master netting arrangements for which we have not assessed the enforceability because they are with counterparties where we do not currently have positions to offset, those subject to master netting arrangements where we have not been able to confirm the enforceability and those not subject to master netting arrangements. As such, we do not net derivative balances or collateral within the consolidated balance sheet for these counterparties. Cash collateral receivables and payables that have not been offset against our derivatives were \$1.6 billion and \$2.9 billion, respectively, at March 31, 2021, and \$1.8 billion and \$984 million, respectively, at December 31, 2020.

We determine the balance sheet netting adjustments based on the terms specified within each master netting arrangement. We disclose the balance sheet netting amounts within the column titled "Gross amounts offset in consolidated balance sheet." Balance sheet netting adjustments are determined at the counterparty level for which there may be multiple contract

Note 14: Derivatives (continued)

types. For disclosure purposes, we allocate these netting adjustments to the contract type for each counterparty proportionally based upon the “Gross amounts recognized” by counterparty. As a result, the net amounts disclosed by contract type may not represent the actual exposure upon settlement of the contracts.

We do not net non-cash collateral that we receive and pledge on our consolidated balance sheet. For disclosure purposes, we present the fair value of this non-cash collateral in the column titled “Gross amounts not offset in consolidated balance sheet (Disclosure-only netting)” within the table. We determine and allocate the Disclosure-only netting amounts in the same manner as balance sheet netting amounts.

The “Net amounts” column within Table 14.2 represents the aggregate of our net exposure to each counterparty after considering the balance sheet and Disclosure-only netting adjustments. We manage derivative exposure by monitoring the credit risk associated with each counterparty using counterparty-specific credit risk limits, using master netting arrangements and obtaining collateral. Derivative contracts executed in OTC markets include bilateral contractual arrangements that are not cleared through a central clearing organization but are typically subject to master netting arrangements. The proportion of these derivative contracts relative to our total derivative assets and liabilities are presented in the “Percent exchanged in over-the-counter market” column in Table 14.2. In addition to the netting amounts included in the table, we also have balance sheet netting related to resale and repurchase agreements that are disclosed within Note 12 (Pledged Assets and Collateral).

Table 14.2: Gross Fair Values of Derivative Assets and Liabilities

(in millions)	Gross amounts recognized	Gross amounts offset in consolidated balance sheet (1)	Net amounts in consolidated balance sheet	Gross amounts not offset in consolidated balance sheet (Disclosure-only netting)	Net amounts	Percent exchanged in over-the-counter market

Total derivative liabilities	\$ 58,065	(41,556)	16,509	(3,588)	12,921	

(1) Represents amounts with counterparties subject to enforceable master netting arrangements that have been offset in the consolidated balance sheet, including related cash collateral and portfolio level counterparty valuation adjustments. Counterparty valuation adjustments related to derivative assets were \$293 million and \$399 million and debit valuation adjustments related to derivative liabilities were \$205 million and \$201 million as of March 31, 2021, and December 31, 2020, respectively. Cash collateral totaled \$5.8 billion and \$4.5 billion, netted against derivative assets and liabilities, respectively, at March 31, 2021, and \$5.5 billion and \$7.5 billion, respectively, at December 31, 2020.

Fair Value and Cash Flow Hedges

For fair value hedges, we use interest rate swaps to convert certain of our fixed-rate long-term debt and time certificates of deposit to floating rates to hedge our exposure to interest rate risk. We also enter into cross-currency swaps, cross-currency interest rate swaps and forward contracts to hedge our exposure to foreign currency risk and interest rate risk associated with the issuance of non-U.S. dollar denominated long-term debt. In addition, we use interest rate swaps, cross-currency swaps, cross-currency interest rate swaps and forward contracts to hedge against changes in fair value of certain investments in available-for-sale debt securities due to changes in interest rates, foreign currency rates, or both. For certain fair value hedges of foreign currency risk, changes in fair value of cross-currency swaps attributable to changes in cross-currency basis spreads are excluded from the assessment of hedge effectiveness and recorded in other comprehensive income. See Note 21 (Other Comprehensive Income) for the amounts recognized in other comprehensive income.

For cash flow hedges, we use interest rate swaps to hedge the variability in interest payments received on certain floating-

rate commercial loans, and paid on certain floating-rate debt due to changes in the contractually specified interest rate. We also use cross-currency swaps to hedge variability in interest payments on fixed-rate foreign currency-denominated long-term debt due to changes in foreign exchange rates.

We estimate \$107 million pre-tax of deferred net losses related to cash flow hedges in OCI at March 31, 2021, will be reclassified into net interest income during the next twelve months. The deferred losses expected to be reclassified into net interest income are predominantly related to discontinued hedges of floating rate loans. For cash flow hedges as of March 31, 2021, we are hedging our foreign currency exposure to the variability of future cash flows for all forecasted transactions for a maximum of 9 years. For additional information on our accounting hedges, see Note 1 (Summary of Significant Accounting Policies).

Table 14.3 and Table 14.4 show the net gains (losses) related to derivatives in fair value and cash flow hedging relationships, respectively.

Table 14.3: Gains (Losses) Recognized on Fair Value Hedging Relationships

Table 14.5 shows the carrying amount and associated cumulative basis adjustment related to the application of hedge accounting that is included in the carrying amount of hedged assets and liabilities in fair value hedging relationships.

Table 14.5: Hedged Items in Fair Value Hedging Relationship

(in millions)	Hedged items currently designated		Hedged items no longer designated (1)	
	Carrying amount of assets/ (liabilities) (2)(4)	Hedge accounting basis adjustment assets/ (liabilities) (3)	Carrying amount of assets/ (liabilities) (4)	Hedge accounting basis adjustment assets/ (liabilities)
March 31, 2021				
Available-for-sale debt securities (5)	\$ 28,215	(462)	16,946	1,050
Deposits	(16,276)	(358)	—	—
Long-term debt	(146,687)	(4,956)	(5,236)	14
December 31, 2020				
Available-for-sale debt securities (5)	\$ 29,538	827	17,091	1,111
Deposits	(22,384)	(477)	—	—
Long-term debt	(156,907)	(12,466)	(14,468)	31

- (1) Represents hedged items no longer designated in qualifying fair value hedging relationships for which an associated basis adjustment exists at the balance sheet date.
- (2) Does not include the carrying amount of hedged items where only foreign currency risk is the designated hedged risk. The carrying amount excluded for debt securities is \$15.3 billion and for long-term debt is \$(4.5) billion as of March 31, 2021, and \$17.6 billion for debt securities and \$(4.7) billion for long-term debt as of December 31, 2020.
- (3) The balance includes \$202 million and \$153 million of debt securities and long-term debt cumulative basis adjustments as of March 31, 2021, respectively, and \$205 million and \$130 million of debt securities and long-term debt cumulative basis adjustments as of December 31, 2020, respectively, on terminated hedges whereby the hedged items have subsequently been re-designated into existing hedges.
- (4) Represents the full carrying amount of the hedged asset or liability item as of the balance sheet date, except for circumstances in which only a portion of the asset or liability was designated as the hedged item in which case only the portion designated is presented.
- (5) Carrying amount represents the amortized cost.

Derivatives Not Designated as Hedging Instruments

Derivatives not designated as hedging instruments include economic hedges and derivatives entered into for customer accommodation trading purposes.

We use economic hedge derivatives to manage our exposure to interest rate risk, equity price risk, foreign currency risk, and credit risk. We also use economic hedge derivatives to mitigate the periodic earnings volatility caused by mismatches between the changes in fair value of the hedged item and hedging instrument recognized on our fair value accounting hedges. In second quarter 2020, we entered into arrangements to

transition the economic hedges of our deferred compensation plan liabilities from equity securities to derivative instruments. Changes in the fair values of derivatives used to economically hedge the deferred compensation plan are reported in personnel expense.

For additional information on economic hedges and other derivatives, see Note 16 (Derivatives) in our 2020 Form 10-K.

Table 14.6 shows the net gains (losses), recognized by income statement lines, related to derivatives not designated as hedging instruments.

Table 14.6: Gains (Losses) on Derivatives Not Designated as Hedging Instruments

(1) Mortgage banking amounts for first quarter 2021 are comprised of gains (losses) of \$(1.6) billion related to derivatives used as economic hedges of MSR's measured at fair value offset by gains (losses) of \$1.3 billion related to derivatives used as economic hedges of mortgage loans held for sale and derivative loan commitments. The corresponding amounts for first quarter 2020 are comprised of gains (losses) of \$3.4 billion offset by gains (losses) of \$(929) million.

Note 14: Derivatives (continued)

Credit Derivatives

Credit derivative contracts are arrangements whose value is derived from the transfer of credit risk of a reference asset or entity from one party (the purchaser of credit protection) to another party (the seller of credit protection). We use credit derivatives to assist customers with their risk management objectives. We may also use credit derivatives in structured product transactions or liquidity agreements written to special purpose vehicles. The maximum exposure of sold credit derivatives is managed through posted collateral, purchased credit derivatives and similar products in order to achieve our desired credit risk profile. This credit risk management provides an ability to recover a significant portion of any amounts that would be paid under sold credit derivatives. We would be

required to perform under the sold credit derivatives in the event of default by the referenced obligors. Events of default include events such as bankruptcy, capital restructuring or lack of principal and/or interest payment. In certain cases, other triggers may exist, such as the credit downgrade of the referenced obligors or the inability of the special purpose vehicle for which we have provided liquidity to obtain funding.

Table 14.7 provides details of sold and purchased credit derivatives.

Table 14.7: Sold and Purchased Credit Derivatives

Total credit derivatives	\$ 10	39	12,085	8,067	3,599	8,486	18,718	

Protection sold represents the estimated maximum exposure to loss that would be incurred under an assumed hypothetical circumstance, where the value of our interests and any associated collateral declines to zero, without any consideration of recovery or offset from any economic hedges. We believe this hypothetical circumstance to be an extremely remote possibility and accordingly, this required disclosure is not an indication of expected loss. The amounts under non-investment grade represent the notional amounts of those credit derivatives on which we have a higher risk of being required to perform under the terms of the credit derivative and are a function of the underlying assets.

We consider the risk of performance to be high if the underlying assets under the credit derivative have an external rating that is below investment grade or an internal credit default grade that is equivalent thereto. We believe the net protection sold, which is representative of the net notional amount of protection sold and purchased with identical underlyings, in combination with other protection purchased, is more representative of our exposure to loss than either non-investment grade or protection sold. Other protection purchased represents additional protection, which may offset the exposure to loss for protection sold, that was not purchased with an identical underlying of the protection sold.

Credit-Risk Contingent Features

Certain of our derivative contracts contain provisions whereby if the credit rating of our debt were to be downgraded by certain major credit rating agencies, the counterparty could demand additional collateral or require termination or replacement of derivative instruments in a net liability position. Table 14.8 illustrates our exposure to OTC bilateral derivative contracts with credit-risk contingent features, collateral we have posted, and the additional collateral we would be required to post if the credit rating of our debt was downgraded below investment grade.

Table 14.8: Credit-Risk Contingent Features

(in billions)	Mar 31, 2021	Dec 31, 2020
Net derivative liabilities with credit-risk contingent features	\$ 10.3	10.5
Collateral posted	9.1	9.0
Additional collateral to be posted upon a below investment grade credit rating (1)	1.2	1.5

(1) Any credit rating below investment grade requires us to post the maximum amount of collateral.

Note 15: Fair Values of Assets and Liabilities

We use fair value measurements to record fair value adjustments to certain assets and liabilities and to determine fair value disclosures. Assets and liabilities recorded at fair value on a recurring basis, such as derivatives, residential MSRs, and trading or AFS debt securities, are presented in Table 15.1 in this Note. Additionally, from time to time, we record fair value adjustments on a nonrecurring basis. These nonrecurring adjustments typically involve application of lower of cost or fair value (LOCOM) accounting, write-downs of individual assets or application of the measurement alternative for nonmarketable equity securities. Assets recorded at fair value on a nonrecurring basis are presented in Table 15.4 in this Note. We provide in Table 15.8 estimates of fair value for financial instruments that are not recorded at fair value, such as loans and debt liabilities carried at amortized cost.

See Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K for discussion of how we determine fair value. For descriptions of the valuation methodologies we use for assets and liabilities recorded at fair value on a recurring or nonrecurring basis, see Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K.

FAIR VALUE HIERARCHY We classify our assets and liabilities recorded at fair value as either Level 1, 2, or 3 in the fair value hierarchy. The highest priority (Level 1) is assigned to valuations based on unadjusted quoted prices in active markets and the lowest priority (Level 3) is assigned to valuations based on significant unobservable inputs. See Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K for a detailed description of the fair value hierarchy.

In the determination of the classification of financial instruments in Level 2 or Level 3 of the fair value hierarchy, we consider all available information, including observable market data, indications of market liquidity and orderliness, and our understanding of the valuation techniques and significant inputs used. This determination is ultimately based upon the specific facts and circumstances of each instrument or instrument category and judgments are made regarding the significance of the unobservable inputs to the instruments' fair value measurement in its entirety. If unobservable inputs are considered significant, the instrument is classified as Level 3.

We do not classify nonmarketable equity securities in the fair value hierarchy if we use the non-published net asset value (NAV) per share (or its equivalent) as a practical expedient to measure fair value. Marketable equity securities with published NAVs are classified in the fair value hierarchy.

Note 15: Fair Values of Assets and Liabilities (continued)

Assets and Liabilities Recorded at Fair Value on a Recurring Basis

Table 15.1 presents the balances of assets and liabilities recorded at fair value on a recurring basis.

- (1) Includes net gains (losses) included in both net income and other comprehensive income. All amounts represent net gains (losses) included in net income except for \$14 million and \$(91) million included in other comprehensive income from available-for-sale debt securities for first quarter 2021 and 2020, respectively.
- (2) Includes originations of mortgage servicing rights and loans held for sale.
- (3) All assets and liabilities transferred into Level 3 were previously classified within Level 2.
- (4) All assets and liabilities transferred out of Level 3 are classified as Level 2.
- (5) Includes net unrealized gains (losses) related to assets and liabilities held at period end included in both net income and other comprehensive income. All amounts represent net unrealized gains (losses) included in net income except for \$0 million and \$(88) million included in other comprehensive income from available-for-sale debt securities for first quarter 2021 and 2020, respectively.
- (6) Included in net gains (losses) on trading and securities in the consolidated statement of income.
- (7) Included in mortgage banking income in the consolidated statement of income.
- (8) For additional information on the changes in mortgage servicing rights, see Note 9 (Mortgage Banking Activities).
- (9) Included in mortgage banking income, net gains (losses) on trading and securities, and other noninterest income in the consolidated statement of income.

Table 15.3 provides quantitative information about the valuation techniques and significant unobservable inputs used in the valuation of our Level 3 assets and liabilities measured at fair value on a recurring basis for which we use an internal model.

The significant unobservable inputs for Level 3 assets and liabilities inherent in the fair values obtained from third-party vendors are not included in the table, as the specific inputs applied are not provided by the vendor (for additional information on vendor-developed valuations, see Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K).

Weighted averages of inputs are calculated using outstanding unpaid principal balance for cash instruments, such as loans and securities, and notional amounts for derivative instruments.

Note 15: Fair Values of Assets and Liabilities (continued)

			Weighted average life	0.5 - 2.0 yrs	1.0
	(534)	Option model	Correlation factor	(77.0) - 99.0 %	24.8
			Volatility factor	6.5 - 96.6	26.4
Nonmarketable equity securities	9,228	Market comparable pricing	Comparability adjustment	(20.3) - (3.2)	(13.8)
Insignificant Level 3 assets, net of liabilities	44				
Total Level 3 assets, net of liabilities	\$ 19,930	(3)			

(1) The high end of the range of inputs is for servicing modified loans. For non-modified loans the range is \$57 - \$244 at March 31, 2021, and \$63 - \$252 at December 31, 2020.

(2) Includes a blend of prepayment speeds and expected defaults. Prepayment speeds are influenced by mortgage interest rates as well as our estimation of drivers of borrower behavior.

(3) Consists of total Level 3 assets of \$23.0 billion and \$21.9 billion and total Level 3 liabilities of \$2.4 billion and \$2.0 billion, before netting of derivative balances, at March 31, 2021, and December 31, 2020, respectively.

For additional information on the internal valuation techniques and significant unobservable inputs used in the valuation of our Level 3 assets and liabilities, including how changes in these inputs affect fair value estimates, see Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K.

Assets and Liabilities Recorded at Fair Value on a Nonrecurring Basis

We may be required, from time to time, to measure certain assets at fair value on a nonrecurring basis in accordance with GAAP. These adjustments to fair value usually result from application of LOCOM accounting, write-downs of individual assets, or application of the measurement alternative for nonmarketable equity securities.

Table 15.4 provides the fair value hierarchy and fair value at the date of the nonrecurring fair value adjustment for all assets

that were still held as of March 31, 2021, and December 31, 2020, and for which a nonrecurring fair value adjustment was recorded during the quarter ended March 31, 2021, and year ended December 31, 2020.

Table 15.5 presents the increase (decrease) in value of certain assets held at the end of the respective reporting periods presented for which a nonrecurring fair value adjustment was recognized during the periods presented.

Table 15.4: Fair Value on a Nonrecurring Basis

(in millions)	March 31, 2021			December 31, 2020		
	Level 2	Level 3	Total	Level 2	Level 3	Total
Loans held for sale (1)	4,517	1,661	6,178	2,672	2,945	5,617
Loans:						
Commercial	338	—	338	1,385	—	1,385
Consumer	208	—	208	395	—	395
Total loans	546	—	546	1,780	—	1,780
Mortgage servicing rights (commercial)	—	—	—	—	510	510
Nonmarketable equity securities	611	26	637	2,397	790	3,187
Other assets	922	50	972	1,350	428	1,778
Total assets at fair value on a nonrecurring basis	\$ 6,596	1,737	8,333	8,199	4,673	12,872

(1) Predominantly consists of commercial mortgages and residential mortgage – first lien loans.

Nonmarketable equity securities includes impairment on private equity and venture capital investments and gains or losses under the measurement alternative. Other assets includes impairments of operating lease ROU assets, valuation losses on foreclosed real estate and other collateral owned, and impairment on private equity and venture capital investments in consolidated portfolio companies.

Table 15.5: Change in Value of Assets with Nonrecurring Fair Value Adjustment

(in millions)	Quarter ended March 31,	
	2021	2020
Loans held for sale	\$ 25	(39)
Loans:		
Commercial	(130)	(95)
Consumer	(47)	(71)
Total loans	(177)	(166)
Nonmarketable equity securities	210	(424)
Other assets	(19)	(334)
Total	\$ 39	(963)

Table 15.6 provides quantitative information about the valuation techniques and significant unobservable inputs used in the valuation of our Level 3 assets that are measured at fair value on a nonrecurring basis and determined using an internal model. The table is limited to financial instruments that had nonrecurring fair value adjustments during the periods presented. Weighted averages of inputs are calculated using outstanding unpaid principal balance for cash instruments, such as loans, and carrying value prior to the nonrecurring fair value measurement for nonmarketable equity securities.

Note 15: Fair Values of Assets and Liabilities (continued)

Table 15.6: Valuation Techniques – Nonrecurring Basis

Insignificant Level 3 assets	19				
Total	\$ 4,673				

(1) See Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K for additional information on the valuation technique(s) and significant unobservable inputs used in the valuation of Level 3 assets.

(2) Consists of approximately \$1.4 billion and \$2.6 billion of government insured/guaranteed loans purchased from GNMA-guaranteed mortgage securitizations at March 31, 2021, and December 31, 2020, respectively, and approximately \$300 million of other mortgage loans that are not government insured/guaranteed at both March 31, 2021, and December 31, 2020.

(3) Applies only to non-government insured/guaranteed loans.

(4) Includes the impact on prepayment rate of expected defaults for government insured/guaranteed loans, which impact the frequency and timing of early resolution of loans.

(5) Includes \$417 million of private equity and venture capital investments in consolidated portfolio companies classified in other assets on the consolidated balance sheet at December 31, 2020.

Fair Value Option

The fair value option is an irrevocable election, generally only permitted upon initial recognition of financial assets or liabilities, to measure eligible financial instruments at fair value with changes in fair value reflected in earnings. We may elect the fair value option to align the measurement model with how the financial assets or liabilities are managed or to reduce complexity or accounting asymmetry. Following is a discussion of the portfolios for which we elected the fair value option. For additional information, including the basis for our fair value

option elections, see Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K.

Table 15.7 reflects differences between the fair value carrying amount of the assets for which we have elected the fair value option and the contractual aggregate unpaid principal amount at maturity. Nonaccrual loans and loans 90 days or more past due and still accruing included in LHFS which we have elected the fair value option were insignificant at March 31, 2021, and December 31, 2020.

Table 15.7: Fair Value Option

(in millions)	March 31, 2021			December 31, 2020		
	Fair value carrying amount	Aggregate unpaid principal	Fair value carrying amount less aggregate unpaid principal	Fair value carrying amount	Aggregate unpaid principal	Fair value carrying amount less aggregate unpaid principal
Loans held for sale	\$ 23,538	23,429	109	18,806	18,217	589

The changes in fair value related to initial measurement and subsequent changes in fair value included in earnings for LHFS accounted for under the fair value option were \$363 million and \$335 million for the quarters ended March 31, 2021 and 2020, respectively. Substantially all of these amounts were included in the mortgage banking noninterest income line of the consolidated statement of income. For performing loans, instrument-specific credit risk gains or losses were derived principally by determining the change in fair value of the loans due to changes in the observable or implied credit spread. Credit spread is the market yield on the loans less the relevant risk-free benchmark interest rate. For nonperforming loans, we attribute all changes in fair value to instrument-specific credit risk. Gains and losses attributable to instrument-specific credit risk related to assets accounted for under the fair value option for the quarters ended March 31, 2021 and 2020 were insignificant.

Disclosures about Fair Value of Financial Instruments

Table 15.8 presents a summary of fair value estimates for financial instruments that are not carried at fair value on a recurring basis. Some financial instruments are excluded from the scope of this table, such as certain insurance contracts, certain nonmarketable equity securities, and leases. This table also excludes assets and liabilities that are not financial instruments such as the value of the long-term relationships with our deposit, credit card and trust customers, MSRs, premises and equipment, goodwill and deferred taxes.

Loan commitments, standby letters of credit and commercial and similar letters of credit are not included in Table 15.8. A reasonable estimate of the fair value of these instruments is the carrying value of deferred fees plus the allowance for unfunded credit commitments, which totaled \$1.3 billion and \$1.4 billion at March 31, 2021, and December 31, 2020, respectively.

The total of the fair value calculations presented does not represent, and should not be construed to represent, the underlying fair value of the Company.

Table 15.8: Fair Value Estimates for Financial Instruments

(in millions)	Carrying amount	Estimated fair value				Total
		Level 1	Level 2	Level 3

Total financial liabilities	\$ 324,728	—	311,641	21,321	—	332,962

(1) Amounts consist of financial instruments for which carrying value approximates fair value.

(2) Excludes lease financing with a carrying amount of \$15.1 billion and \$15.4 billion at March 31, 2021, and December 31, 2020, respectively.

(3) Excludes deposit liabilities with no defined or contractual maturity of \$1.4 trillion at both March 31, 2021, and December 31, 2020, respectively.

(4) Excludes capital lease obligations under capital leases of \$28 million at both March 31, 2021, and December 31, 2020, respectively.

Note 16: Preferred Stock

We are authorized to issue 20 million shares of preferred stock and 4 million shares of preference stock, both without par value. Preferred shares outstanding rank senior to common shares both as to dividends and liquidation preference but have no general voting rights. We have not issued any preference shares under this authorization. If issued, preference shares would be limited to one vote per share. Our total authorized, issued and outstanding preferred stock is presented in the following two

tables along with the Employee Stock Ownership Plan (ESOP) Cumulative Convertible Preferred Stock.

In January 2021, we issued \$3.5 billion of our Preferred Stock, Series BB, and in February 2021, we issued \$1.05 billion of our Preferred Stock, Series CC. In March 2021, we redeemed our Preferred Stock Series I, Series P and Series W, and partially redeemed our Preferred Stock, Series N, for an aggregate cost of \$4.5 billion.

Total		5,652,642		5,557,652

- (1) Series I preferred stock issuance relates to trust preferred securities. See Note 8 (Securitizations and Variable Interest Entities) for additional information. This issuance has a floating interest rate that is the greater of three-month London Interbank Offered Rate (LIBOR) plus 0.93% and 5.56975%. In first quarter 2021, Preferred Stock, Series I, was redeemed.
- (2) Preferred Stock, Series L, may be converted at any time, at the option of the holder, into 6.3814 shares of our common stock, plus cash in lieu of fractional shares, subject to anti-dilution adjustments.
- (3) In first quarter 2021, 16,000 shares of Preferred Stock, Series N, were redeemed. In addition, Preferred Stock, Series P and Series W were fully redeemed.
- (4) See the "ESOP Cumulative Convertible Preferred Stock" section in this Note for additional information about the liquidation preference for the ESOP Cumulative Convertible Preferred Stock.

- (1) Floating rate for Preferred Stock, Series I, is the greater of three-month London Interbank Offered Rate (LIBOR) plus 0.93% and 5.56975%. In first quarter 2021, Preferred Stock, Series I, was redeemed.
- (2) Preferred Stock, Series L, may be converted at any time, at the option of the holder, into 6.3814 shares of our common stock, plus cash in lieu of fractional shares, subject to anti-dilution adjustments.
- (3) In first quarter 2021, \$400 million of Preferred Stock, Series N, was redeemed. In addition, Preferred Stock, Series P and Series W were fully redeemed.
- (4) See the "ESOP Cumulative Convertible Preferred Stock" section in this Note for additional information about the liquidation preference for the ESOP Cumulative Convertible Preferred Stock.

Note 16: Preferred Stock (continued)

ESOP CUMULATIVE CONVERTIBLE PREFERRED STOCK All shares of our ESOP Cumulative Convertible Preferred Stock (ESOP Preferred Stock) were issued to a trustee acting on behalf of the Wells Fargo & Company 401(k) Plan (the 401(k) Plan). Dividends on the ESOP Preferred Stock are cumulative from the date of initial issuance and are payable quarterly at annual rates based upon the year of issuance. Each share of ESOP Preferred Stock released from the unallocated reserve of the 401(k) Plan is converted into shares of our common stock based on the stated

value of the ESOP Preferred Stock and the then current market price of our common stock. The ESOP Preferred Stock is also convertible at the option of the holder at any time, unless previously redeemed. We have the option to redeem the ESOP Preferred Stock at any time, in whole or in part, at a redemption price per share equal to the higher of (a) \$1,000 per share plus accrued and unpaid dividends or (b) the fair market value, as defined in the Certificates of Designation for the ESOP Preferred Stock.

Table 16.3: ESOP Preferred Stock

(in millions, except shares)	Shares issued and outstanding		Carrying value		Adjustable dividend rate	
	Mar 31, 2021	Dec 31, 2020	Mar 31, 2021	Dec 31, 2020	Minimum	Maximum
ESOP Preferred Stock						
\$1,000 liquidation preference per share						
2018	221,945	221,945	\$ 222	222	7.00 %	8.00 %
2017	163,210	163,210	163	163	7.00	8.00
2016	162,450	162,450	162	162	9.30	10.30
2015	92,904	92,904	93	93	8.90	9.90
2014	99,151	99,151	99	99	8.70	9.70
2013	61,948	61,948	62	62	8.50	9.50
2012	20,634	20,634	21	21	10.00	11.00
Total ESOP Preferred Stock (1)	822,242	822,242	\$ 822	822		
Unearned ESOP shares (2)			\$ (875)	(875)		

(1) At both March 31, 2021, and December 31, 2020, additional paid-in capital included \$53 million related to ESOP preferred stock.

(2) We recorded a corresponding charge to unearned ESOP shares in connection with the issuance of the ESOP Preferred Stock. The unearned ESOP shares are reduced as shares of the ESOP Preferred Stock are committed to be released.

Note 17: Revenue from Contracts with Customers (continued)

Trust services include acting as a trustee or agent for corporate trust, personal trust, and agency assets. Obligations for trust services are generally satisfied over time; however, obligations for activities that are transitional in nature are satisfied at the time of the transaction.

COMMISSIONS AND BROKERAGE SERVICES FEES are earned for providing brokerage services.

Commissions from transactional accounts with brokerage customers are earned for executing transactions at the client's direction. Our obligation is generally satisfied upon the execution of the transaction and the fees are based on the size and number of transactions executed.

Fees earned from other brokerage services include securities clearance, omnibus and networking fees received from mutual fund companies in return for providing record keeping and other administrative services, and annual account maintenance fees charged to customers. Our obligation is satisfied at the time we provide the service which is generally at the time of the transaction.

For a description of our other revenues, see Note 20 (Revenue from Contracts with Customers) in our 2020 Form 10-K.

Note 18: Employee Benefits and Other Expenses

Pension and Postretirement Plans

We sponsor a frozen noncontributory qualified defined benefit retirement plan, the Wells Fargo & Company Cash Balance Plan (Cash Balance Plan), which covers eligible employees of Wells Fargo. The Cash Balance Plan was frozen on July 1, 2009, and no new benefits accrue after that date. For additional information on our pension and postretirement plans, including plan assumptions, investment strategy and asset allocation,

projected benefit payments, and valuation methodologies used for assets measured at fair value, see Note 21 (Employee Benefits and Other Expenses) in our 2020 Form 10-K.

Table 18.1 presents the components of net periodic benefit cost. Service cost is reported in personnel expense and all other components of net periodic benefit cost are reported in other noninterest expense on the consolidated statement of income.

Table 18.1: Net Periodic Benefit Cost

(in millions)	2021			2020		
	Pension benefits		Other benefits	Pension benefits		
	Qualified	Non-qualified		Qualified	Non-qualified	Other benefits
Quarter ended March 31,						
Service cost	\$ 4	—	—	3	—	—
Interest cost	71	3	3	86	4	4
Expected return on plan assets	(152)	—	(5)	(148)	—	(6)
Amortization of net actuarial loss (gain)	37	4	(5)	36	4	(5)
Amortization of prior service credit	—	—	(2)	—	—	(2)
Settlement loss	—	2	—	—	3	—
Net periodic benefit cost	\$ (40)	9	(9)	(23)	11	(9)

Other Expenses

Regulatory Charges and Assessments expense, which is included in other noninterest expense, was \$217 million and \$163 million in first quarter 2021 and 2020, respectively, and primarily consisted of Federal Deposit Insurance Corporation (FDIC) deposit assessment expense.

Note 19: Restructuring Charges

The Company began pursuing various initiatives to reduce expenses and create a more efficient and streamlined organization in third quarter 2020. Actions from these initiatives may include (i) reorganizing and simplifying business processes and structures to improve internal operations and the customer experience, (ii) reducing headcount, (iii) optimizing third-party spending, including for our technology infrastructure, and (iv) rationalizing our branch and administrative locations, which may include consolidations and closures.

Restructuring charges are recorded as a component of noninterest expense on our consolidated statement of income.

The following costs associated with these initiatives are included in restructuring charges.

- Personnel costs – Severance costs associated with headcount reductions with payments made over time in accordance with our severance plan, as well as payments for other employee benefit costs such as incentive compensation.
- Facility closure costs – Write-downs and acceleration of depreciation and amortization of owned or leased assets for branch and administrative locations, as well as related decommissioning costs.
- Other – Impairment of other assets and costs associated with our technology infrastructure.

Table 19.1 provides details on our restructuring charges.

Table 19.1: Accruals for Restructuring Charges

(in millions)	Personnel costs	Facility closure costs	Other	Total
December 31, 2019	\$ —	—	—	—
Restructuring charges	1,371	80	144	1,595
Payments and utilization	(105)	(80)	(100)	(285)
Changes in estimates (1)	(96)	—	—	(96)
December 31, 2020	\$ 1,170	—	44	1,214
Restructuring charges	130	15	—	145
Payments and utilization	(157)	(15)	(1)	(173)
Changes in estimates (1)	(133)	—	1	(132)
March 31, 2021	\$ 1,010	—	44	1,054

(1) Represents reduction of expense for changes in previously estimated amounts based on refinements of assumptions.

Note 20: Earnings and Dividends Per Common Share

Table 20.1 shows earnings per common share and diluted earnings per common share and reconciles the numerator and denominator of both earnings per common share calculations.

Table 20.1: Earnings Per Common Share Calculations

(in millions, except per share amounts)	Quarter ended March 31,	
	2021	2020
Wells Fargo net income	\$ 4,742	653
Less: Preferred stock dividends and other (1)	379	611
Wells Fargo net income applicable to common stock (numerator)	\$ 4,363	42
Earnings per common share		
Average common shares outstanding (denominator)	4,141.3	4,104.8
Per share	\$ 1.05	0.01
Diluted earnings per common share		
Average common shares outstanding	4,141.3	4,104.8
Add: Restricted share rights (2)	29.7	30.5
Diluted average common shares outstanding (denominator)	4,171.0	4,135.3
Per share	\$ 1.05	0.01

- (1) The quarters ended March 31, 2021 and 2020, includes \$44 million and \$272 million, respectively, from the elimination of discounts or issuance costs associated with redemptions of preferred stock.
(2) Calculated using the treasury stock method.

Table 20.2 presents the outstanding securities that were anti-dilutive and therefore not included in the calculation of diluted earnings per common share.

Table 20.2: Outstanding Anti-Dilutive Securities

(in millions)	Weighted-average shares	
	Quarter ended March 31,	
	2021	2020
Convertible Preferred Stock, Series L (1)	25.3	25.3
Restricted share rights (2)	0.3	—

- (1) Calculated using the if-converted method.
(2) Calculated using the treasury stock method.

Table 20.3 presents dividends declared per common share.

Table 20.3: Dividends Declared Per Common Share

	Quarter ended March 31,	
	2021	2020
Per common share	\$ 0.10	0.51

Note 21: Other Comprehensive Income

Table 21.1 provides the components of other comprehensive income (OCI), reclassifications to net income by income statement line item, and the related tax effects.

Table 21.1: Summary of Other Comprehensive Income

(in millions)	Quarter ended March 31,					
	2021			2020		
	Before tax	Tax effect	Net of tax	Before tax	Tax effect	Net of tax
Debt securities:						
Net unrealized losses arising during the period	\$ (2,012)	500	(1,512)	\$ (110)	22	(88)
Reclassification of net (gains) losses to net income:						
Interest income on debt securities (1)	137	(34)	103	66	(16)	50
Net gains on debt securities	(151)	35	(116)	(237)	48	(189)
Other noninterest income	—	—	—	(1)	—	(1)
Subtotal reclassifications to net income	(14)	1	(13)	(172)	32	(140)
Net change	(2,026)	501	(1,525)	(282)	54	(228)
Derivatives and hedging activities:						
Fair Value Hedges:						
Change in fair value of excluded components on fair value hedges (2)	25	(6)	19	144	(35)	109
Cash Flow Hedges:						
Net unrealized losses arising during the period on cash flow hedges	(31)	8	(23)	(20)	5	(15)
Reclassification of net losses to net income:						
Interest income on loans	52	(13)	39	56	(14)	42
Interest expense on long-term debt	1	—	1	2	(1)	1

Balance, end of period	1,324	(71)	(270)	(2,193)	(354)	(1,564)

(1) Substantially all of the amounts for fair value hedges are foreign exchange contracts.

(2) Substantially all of the amounts for cash flow hedges are interest rate contracts.

Note 22: Operating Segments

Our management reporting is organized into four reportable operating segments: Consumer Banking and Lending; Commercial Banking; Corporate and Investment Banking; and Wealth and Investment Management. All other business activities that are not included in the reportable operating segments have been included in Corporate. We define our reportable operating segments by type of product and customer segment, and their results are based on our management reporting process. The management reporting process measures the performance of the reportable operating segments based on the Company's management structure, and the results are regularly reviewed by our Chief Executive Officer and Operating Committee. The management reporting process is based on U.S. GAAP and includes specific adjustments, such as funds transfer pricing for asset/liability management, shared revenues and expenses, and taxable-equivalent adjustments to consistently reflect income from taxable and tax-exempt sources, which allows management to assess performance consistently across the operating segments.

In February 2021, we announced an agreement to sell Wells Fargo Asset Management (WFAM) and moved the business from the Wealth and Investment Management operating segment to Corporate. Prior period balances have been revised to conform with the current period presentation. This change did not impact the previously reported consolidated financial results of the Company.

Consumer Banking and Lending offers diversified financial products and services for consumers and small businesses with annual sales generally up to \$5 million. These financial products and services include checking and savings accounts, credit and debit cards, as well as home, auto, personal, and small business lending.

Commercial Banking provides financial solutions to private, family owned and certain public companies. Products and services include banking and credit products across multiple industry sectors and municipalities, secured lending and lease products, and treasury management.

Corporate and Investment Banking delivers a suite of capital markets, banking, and financial products and services to corporate, commercial real estate, government and institutional clients globally. Products and services include corporate banking, investment banking, treasury management, commercial real estate lending and servicing, equity and fixed income solutions, as well as sales, trading, and research capabilities.

Wealth and Investment Management provides personalized wealth management, investment and retirement products and services to clients across U.S.-based businesses including Wells Fargo Advisors and The Private Bank. We serve clients' brokerage needs, and deliver financial planning, private banking, credit, and fiduciary services to high-net worth and ultra-high-net worth individuals and families.

Corporate includes corporate treasury and enterprise functions, net of allocations (including funds transfer pricing, capital, liquidity and certain expenses), in support of the reportable operating segments, as well as our investment portfolio and affiliated venture capital and private equity partnerships. In addition, Corporate includes all restructuring charges related to our efficiency initiatives. See Note 19 (Restructuring Charges) for additional information on restructuring charges. Corporate also includes certain lines of business that management has determined are no longer consistent with the long-term strategic goals of the Company, including our student loan business, rail car leasing business, and WFAM, as well as results for previously divested businesses.

Basis of Presentation

FUNDS TRANSFER PRICING Corporate treasury manages a funds transfer pricing methodology that considers interest rate risk, liquidity risk, and other product characteristics. Operating segments pay a funding charge for their assets and receive a funding credit for their deposits, both of which are included in net interest income. The net impact of the funding charges or credits is recognized in corporate treasury.

REVENUE AND EXPENSE SHARING When lines of business jointly serve customers, the line of business that is responsible for providing the product or service recognizes revenue or expense with a referral fee paid or an allocation of cost to the other line of business based on established internal revenue-sharing agreements.

When a line of business uses a service provided by another line of business or enterprise function (included in Corporate), expense is generally allocated based on the cost and use of the service provided.

TAXABLE-EQUIVALENT ADJUSTMENTS Taxable-equivalent adjustments related to tax-exempt income on certain loans and debt securities are included in net interest income, while taxable-equivalent adjustments related to income tax credits for low-income housing and renewable energy investments are included in noninterest income, in each case with corresponding impacts to income tax expense (benefit). Adjustments are included in Corporate, Commercial Banking, and Corporate and Investment Banking and are eliminated to reconcile to the Company's consolidated financial results.

Note 22: Operating Segments (continued)

Table 22.1 presents our results by operating segment.

Table 22.1: Operating Segments

	Quarter ended March 31,						
(\$ in millions)	Consumer Banking and Lending	Commercial Banking	Corporate and Investment Banking	Wealth and Investment Management	Corporate	Reconciling Items (1)	Consolidated Company

2020							
Loans (average)	\$ 382,562	224,857	258,242	77,883	21,502	—	965,046
Assets (average)	439,386	244,438	551,987	85,638	629,210	—	1,950,659
Deposits (average)	652,706	193,454	266,167	145,388	80,248	—	1,337,963
Loans (period-end)	380,201	241,603	287,772	78,182	22,085	—	1,009,843
Assets (period-end)	435,976	260,644	574,660	87,274	622,795	—	1,981,349
Deposits (period-end)	672,603	209,495	260,281	162,370	71,783	—	1,376,532

- (1) Taxable-equivalent adjustments related to tax-exempt income on certain loans and debt securities are included in net interest income, while taxable-equivalent adjustments related to income tax credits for low-income housing and renewable energy investments are included in noninterest income, in each case with corresponding impacts to income tax expense (benefit). Adjustments are included in Corporate, Commercial Banking, and Corporate and Investment Banking and are eliminated to reconcile to the Company's consolidated financial results.
- (2) Net interest income is the difference between interest earned on assets and the cost of liabilities to fund those assets. Interest earned includes actual interest earned on segment assets as well as interest credits for any funding of a segment available to be provided to other segments. The cost of liabilities includes actual interest expense on segment liabilities as well as funding charges for any funding provided from other segments.

Note 23: Regulatory Capital Requirements and Other Restrictions

Regulatory Capital Requirements

The Company and each of its subsidiary banks are subject to regulatory capital adequacy requirements promulgated by federal banking regulators. The FRB establishes capital requirements for the consolidated financial holding company, and the OCC has similar requirements for the Company's national banks, including Wells Fargo Bank, N.A. (the Bank).

Table 23.1 presents regulatory capital information for Wells Fargo & Company and the Bank in accordance with Basel III capital requirements. Our capital adequacy is assessed based on the lower of our risk-based capital ratios calculated under the Standardized Approach and under the Advanced Approach. The Standardized Approach applies assigned risk weights to broad risk categories, while the calculation of risk-weighted assets (RWAs) under the Advanced Approach differs by requiring

applicable banks to utilize a risk-sensitive methodology, which relies upon the use of internal credit models, and includes an operational risk component. The Basel III capital requirements for calculating Common Equity Tier 1 (CET1) and tier 1 capital, along with RWAs, are fully phased-in. However, the requirements for determining tier 2 and total capital are still in accordance with transition requirements and are scheduled to be fully phased-in by the end of 2021. Accordingly, the information presented below reflects fully phased-in CET1 capital, tier 1 capital, and RWAs, but reflects total capital still in accordance with transition requirements.

At March 31, 2021, the Bank and our other insured depository institutions were considered well-capitalized under the requirements of the Federal Deposit Insurance Act.

Regulatory leverage:								
Total leverage exposure (3)	\$ 2,019,389		1,963,971		2,095,040		2,041,952	
Supplementary leverage ratio (SLR) (3)(4)		7.91 %		8.05		7.16		7.35
Tier 1 leverage ratio (5)		8.36		8.32		8.64		8.65

*Denotes the binding ratio based on the lower calculation under the Advanced and Standardized Approaches.

- At March 31, 2021, the impact of the CECL transition provision issued by federal banking regulators on the regulatory capital of the Company was an increase in capital of \$1.3 billion, reflecting a \$991 million (post-tax) increase in capital recognized upon our initial adoption of CECL, offset by 25% of the \$9.2 billion increase in our ACL under CECL from January 1, 2020, through March 31, 2021. The impact of the CECL transition provision on the regulatory capital of the Bank at March 31, 2021, was an increase in capital of \$1.3 billion.
- RWAs for the Company and the Bank included an increase of \$1.0 billion under the Standardized Approach and decreases of \$1.4 billion and \$1.3 billion, respectively, under the Advanced Approach related to the impact of the CECL transition provision on the excess allowance for credit losses as of March 31, 2021.
- The SLR consists of tier 1 capital divided by total leverage exposure. Total leverage exposure consists of total average assets, less goodwill and other permitted tier 1 capital deductions (net of deferred tax liabilities), plus certain off-balance sheet exposures.
- In 2020, the FRB issued an interim final rule that temporarily allowed the exclusion for on-balance sheet amounts of U.S. Treasury securities and deposits at Federal Reserve Banks from the calculation of total leverage exposure in the denominator of the SLR. The Company adopted this interim final rule, but the Bank did not elect to apply these exclusions. The interim final rule expired on April 1, 2021.
- The tier 1 leverage ratio consists of tier 1 capital divided by total average assets, excluding goodwill and certain other items as determined under the rule.

At March 31, 2021, under transition requirements, the CET1, tier 1 and total capital ratio requirements for the Company included a global systemically important bank (G-SIB) surcharge of 2.00%. The G-SIB surcharge is not applicable to the Bank. In addition, the CET1, tier 1 and total capital ratio requirements for the Company and the Bank included a stress capital buffer of 2.50% under the Standardized Approach and a capital conservation buffer of 2.50% under the Advanced Approach. The Company is required to maintain these risk-based capital ratios and to maintain an SLR of at least 5.00% (comprised of a 3.00% minimum requirement plus a supplementary leverage buffer of 2.00%) to avoid restrictions on capital distributions and discretionary bonus payments. The Bank is required to maintain an SLR of at least 6.00% to be considered well-capitalized under applicable regulatory capital adequacy rules. Table 23.2 presents the risk-based capital and leverage requirements under

transition requirements to which the Company and the Bank were subject as of March 31, 2021, and December 31, 2020, which were the same under both the Standardized and Advanced Approaches.

Table 23.2: Risk-Based Capital and Leverage Ratios – Transition Requirements

	Wells Fargo & Company	Wells Fargo Bank, N.A.
	Mar 31, 2021 and Dec 31, 2020	Mar 31, 2021 and Dec 31, 2020
Common Equity Tier 1 capital	9.00 %	7.00
Tier 1 capital	10.50	8.50
Total capital	12.50	10.50
Tier 1 leverage	4.00	4.00
Supplementary leverage	5.00	6.00

Note 23: Regulatory Capital Requirements and Other Restrictions (continued)

Capital Planning Requirements

The FRB's capital plan rule establishes capital planning and other requirements that govern capital distributions, including dividends and share repurchases, by certain large bank holding companies (BHCs), including Wells Fargo. The FRB conducts an annual Comprehensive Capital Analysis and Review exercise and has also published guidance regarding its supervisory expectations for capital planning, including capital policies regarding the process relating to common stock dividend and repurchase decisions in the FRB's SR Letter 15-18. The Parent's ability to make certain capital distributions is subject to the requirements of the capital plan rule and is also subject to the Parent meeting or exceeding certain regulatory capital minimums.

On March 25, 2021, the FRB announced that it was extending measures it previously announced limiting large BHCs, including Wells Fargo, from making any capital distribution (excluding any capital distribution arising from the issuance of a capital instrument eligible for inclusion in the numerator of a regulatory capital ratio), unless otherwise approved by the FRB. The FRB has generally authorized BHCs to (i) provided that the BHC does not increase the amount of its common stock dividends to be larger than the level paid in second quarter 2020, pay common stock dividends and make share repurchases that, in the aggregate, do not exceed an amount equal to the average of the BHC's net income for the four preceding calendar quarters; (ii) make share repurchases that equal the amount of share issuances related to expensed employee compensation; and (iii) redeem and make scheduled payments on additional tier 1 and tier 2 capital instruments. The FRB has also announced that if a BHC remains above all of its minimum risk-based capital requirements in this year's supervisory stress test, these additional limitations on capital distributions will end for that BHC after June 30, 2021. However, a BHC that falls below any of its minimum risk-based capital requirements in this year's supervisory stress test will remain subject to the additional limitations on capital distributions through September 30, 2021, and if the BHC remains below the capital required by the supervisory stress test at that time, the existing stress capital buffer framework will impose even stricter capital distribution limitations.

Loan and Dividend Restrictions

Federal law restricts the amount and the terms of both credit and non-credit transactions between a bank and its nonbank affiliates. Additionally, federal laws and regulations limit the dividends that a national bank may pay.

Our nonbank subsidiaries are also limited by certain federal and state statutory provisions and regulations covering the amount of dividends that may be paid in any given year. In addition, under a Support Agreement dated June 28, 2017, as amended and restated on June 26, 2019, among Wells Fargo & Company, the parent holding company (the "Parent"), WFC Holdings, LLC, an intermediate holding company and subsidiary of the Parent (the "IHC"), Wells Fargo Bank, N.A., Wells Fargo Securities, LLC, Wells Fargo Clearing Services, LLC, and certain other direct and indirect subsidiaries of the Parent designated as material entities for resolution planning purposes or identified as related support entities in our resolution plan, the IHC may be restricted from making dividend payments to the Parent if certain liquidity and/or capital metrics fall below defined triggers or if the Parent's board of directors authorizes it to file a case under the U.S. Bankruptcy Code.

For additional information on loan and dividend restrictions, see Note 28 (Regulatory Capital Requirements and Other Restrictions) in our 2020 Form 10-K.

Cash Restrictions

Cash and cash equivalents may be restricted as to usage or withdrawal. Table 23.3 provides a summary of restrictions on cash and cash equivalents.

Table 23.3: Nature of Restrictions on Cash and Cash Equivalents

(in millions)	Mar 31, 2021	Dec 31, 2020
Reserve balance for non-U.S. central banks	\$ 234	243
Segregated for benefit of brokerage customers under federal and other brokerage regulations	908	957

Glossary of Acronyms

ACL	Allowance for credit losses	HTM	Held-to-maturity
AFS	Available-for-sale	LCR	Liquidity coverage ratio
ALCO	Asset/Liability Committee	LHFS	Loans held for sale
ARM	Adjustable-rate mortgage	LIBOR	London Interbank Offered Rate
ASC	Accounting Standards Codification	LIHTC	Low-income housing tax credit
ASU	Accounting Standards Update	LOCOM	Lower of cost or fair value
AUA	Assets under administration	LTV	Loan-to-value
AUM	Assets under management	MBS	Mortgage-backed security
AVM	Automated valuation model	MSR	Mortgage servicing right
BCBS	Basel Committee on Banking Supervision	NAV	Net asset value
BHC	Bank holding company	NPA	Nonperforming asset
CCAR	Comprehensive Capital Analysis and Review	NSFR	Net stable funding ratio
CD	Certificate of deposit	OCC	Office of the Comptroller of the Currency
CECL	Current expected credit loss	OCI	Other comprehensive income
CET1	Common Equity Tier 1	OTC	Over-the-counter
CFPB	Consumer Financial Protection Bureau	OTTI	Other-than-temporary impairment
CLO	Collateralized loan obligation	PCD	Purchased credit-deteriorated
CLTV	Combined loan-to-value	PCI	Purchased credit-impaired
CPI	Collateral protection insurance	PTPP	Pre-tax pre-provision profit
CRE	Commercial real estate	RMBS	Residential mortgage-backed securities
DPD	Days past due	ROA	Return on average assets
ESOP	Employee Stock Ownership Plan	ROE	Return on average equity
FASB	Financial Accounting Standards Board	ROTCE	Return on average tangible common equity
FDIC	Federal Deposit Insurance Corporation	RWAs	Risk-weighted assets
FHA	Federal Housing Administration	SEC	Securities and Exchange Commission
FHLB	Federal Home Loan Bank	S&P	Standard & Poor's Ratings Services
FHLMC	Federal Home Loan Mortgage Corporation	SLR	Supplementary leverage ratio
FICO	Fair Isaac Corporation (credit rating)	SOFR	Secured Overnight Financing Rate
FNMA	Federal National Mortgage Association	SPE	Special purpose entity
FRB	Board of Governors of the Federal Reserve System	TDR	Troubled debt restructuring
GAAP	Generally accepted accounting principles	TLAC	Total Loss Absorbing Capacity
GNMA	Government National Mortgage Association	VA	Department of Veterans Affairs
GSE	Government-sponsored entity	VaR	Value-at-Risk
G-SIB	Global systemically important bank	VIE	Variable interest entity
HQLA	High-quality liquid assets	WIM	Wealth and Investment Management

Note 23: Regulatory Capital Requirements and Other Restrictions (continued)

PART II – OTHER INFORMATION

Item 1. Legal Proceedings

Information in response to this item can be found in Note 13 (Legal Actions) to Financial Statements in this Report which information is incorporated by reference into this item.

Item 1A. Risk Factors

Information in response to this item can be found under the “Financial Review – Risk Factors” section in this Report which information is incorporated by reference into this item.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

The following table shows Company repurchases of its common stock for each calendar month in the quarter ended March 31, 2021.

Calendar month	Total number of shares repurchased (1)	Weighted average price paid per share	Maximum number of shares that may yet be repurchased under the authorizations
January	11,558,076	\$ 32.15	655,683,183
February	53,726	34.67	655,629,457
March	5,599,343	39.71	650,030,114
Total	17,211,145		

(1) All shares were repurchased under an authorization covering up to 350 million shares of common stock approved by the Board of Directors and publicly announced by the Company on July 23, 2019. In addition, the Company publicly announced on January 15, 2021, that the Board of Directors authorized the repurchase of an additional 500 million shares of common stock. Unless modified or revoked by the Board, these authorizations do not expire.

Item 6. Exhibits

A list of exhibits to this Form 10-Q is set forth below.

The Company's SEC file number is 001-2979. On and before November 2, 1998, the Company filed documents with the SEC under the name Norwest Corporation. The former Wells Fargo & Company filed documents under SEC file number 001-6214.

<u>Exhibit Number</u>	<u>Description</u>	<u>Location</u>
3(a)	Restated Certificate of Incorporation, as amended and in effect on the date hereof.	Filed herewith.
3(b)	By-Laws.	Incorporated by reference to Exhibit 3.1 to the Company's Current Report on Form 8-K filed March 1, 2018.
4(a)	See Exhibits 3(a) and 3(b).	
4(b)	The Company agrees to furnish upon request to the Commission a copy of each instrument defining the rights of holders of senior and subordinated debt of the Company.	
22	Subsidiary guarantors and issuers of guaranteed securities and affiliates whose securities collateralize securities of the registrant.	Incorporated by reference to Exhibit 22 to the Company's Annual Report on Form 10-K for the year ended December 31, 2020.
31(a)	Certification of principal executive officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.	Filed herewith.
31(b)	Certification of principal financial officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.	Filed herewith.

NM – Not meaningful

- In second quarter 2021, we elected to change our accounting method for low-income housing tax credit investments and elected to change the presentation of investment tax credits related to solar energy investments. Prior period financial statement line items have been revised to conform with the current period presentation. Prior period risk-based capital and certain other regulatory related metrics were not revised. For additional information, see the "Recent Developments" section and Note 1 (Summary of Significant Accounting Policies) to Financial Statements in this Report.
- Pre-tax pre-provision profit (PTPP) (2) is total revenue less noninterest expense. Management believes that PTPP is a useful financial measure because it enables investors and others to assess the Company's ability to generate capital to cover credit losses through a credit cycle.
- In second quarter 2020, diluted average common shares outstanding equaled average common shares outstanding because our securities convertible into common shares had an anti-dilutive effect.
- Book value per common share is common stockholders' equity divided by common shares outstanding. Tangible book value per common share is tangible common equity divided by common shares outstanding.
- Tangible common equity is a non-GAAP financial measure and represents total equity less preferred equity, noncontrolling interests, goodwill, certain identifiable intangible assets (other than mortgage servicing rights) and goodwill and other intangibles on nonmarketable equity securities, net of applicable deferred taxes. The methodology of determining tangible common equity may differ among companies. Management believes that return on average tangible common equity and tangible book value per common share, which utilize tangible common equity, are useful financial measures because they enable management, investors, and others to assess the Company's use of equity. For additional information, including a corresponding reconciliation to generally accepted accounting principles (GAAP) financial measures, see the "Capital Management – Tangible Common Equity" section in this Report.
- Represents Wells Fargo net income (loss) divided by average assets.
- Represents Wells Fargo net income (loss) applicable to common stock divided by average common stockholders' equity.
- The efficiency ratio is noninterest expense divided by total revenue (net interest income and noninterest income).
- The information presented reflects fully phased-in CET1, tier 1 capital, and RWAs, but reflects total capital in accordance with transition requirements. For additional information, see the "Capital Management" section and Note 23 (Regulatory Capital Requirements and Other Restrictions) to Financial Statements in this Report.
- Represents TLAC divided by the greater of RWAs determined under the Standardized and Advanced Approaches, which is our binding TLAC ratio.
- Represents high-quality liquid assets divided by projected net cash outflows, as each is defined under the LCR rule.

This Quarterly Report, including the Financial Review and the Financial Statements and related Notes, contains forward-looking statements, which may include forecasts of our financial results and condition, expectations for our operations and business, and our assumptions for those forecasts and expectations. Do not unduly rely on forward-looking statements. Actual results may differ materially from our forward-looking statements due to several factors. Factors that could cause our actual results to differ materially from our forward-looking statements are described in this Report, including in the “Forward-Looking Statements” section, and in the “Risk Factors” and “Regulation and Supervision” sections of our Annual Report on Form 10-K for the year ended December 31, 2020 (2020 Form 10-K).

When we refer to “Wells Fargo,” “the Company,” “we,” “our,” or “us” in this Report, we mean Wells Fargo & Company and Subsidiaries (consolidated). When we refer to the “Parent,” we mean Wells Fargo & Company. See the Glossary of Acronyms for definitions of terms used throughout this Report.

Financial Review

Overview

Wells Fargo & Company is a leading financial services company that has approximately \$1.9 trillion in assets, proudly serves one in three U.S. households and more than 10% of small businesses in the U.S., and is the leading middle market banking provider in the U.S. We provide a diversified set of banking, investment and mortgage products and services, as well as consumer and commercial finance, through our four reportable operating segments: Consumer Banking and Lending, Commercial Banking, Corporate and Investment Banking, and Wealth and Investment Management. Wells Fargo ranked No. 37 on *Fortune’s* 2021 rankings of America’s largest corporations. We ranked fourth in assets and third in the market value of our common stock among all U.S. banks at June 30, 2021.

Wells Fargo’s top priority remains meeting its regulatory requirements to build the right foundation for all that lies ahead. The Company is subject to a number of consent orders and other regulatory actions, which may require the Company, among other things, to undertake certain changes to its business, operations, products and services, and risk management practices. Addressing these regulatory actions is expected to take multiple years, and we may experience issues or delays along the way in satisfying their requirements. Issues or delays with one regulatory action could affect our progress on others, and failure to satisfy the requirements of a regulatory action on a timely basis could result in additional penalties, enforcement actions, and other negative consequences. While we still have significant work to do, the Company is committed to devoting the resources necessary to operate with strong business practices and controls, maintain the highest level of integrity, and have an appropriate culture in place.

Federal Reserve Board Consent Order Regarding Governance Oversight and Compliance and Operational Risk Management

On February 2, 2018, the Company entered into a consent order with the Board of Governors of the Federal Reserve System (FRB). As required by the consent order, the Company’s Board of Directors (Board) submitted to the FRB a plan to further enhance the Board’s governance and oversight of the Company, and the Company submitted to the FRB a plan to further improve the Company’s compliance and operational risk management program. The Company continues to engage with the FRB as the Company works to address the consent order provisions. The consent order also requires the Company, following the FRB’s acceptance and approval of the plans and the Company’s adoption and implementation of the plans, to complete an initial third-party review of the enhancements and improvements provided for in the plans. Until this third-party review is complete and the plans are approved and implemented to the satisfaction

of the FRB, the Company’s total consolidated assets as defined under the consent order will be limited to the level as of December 31, 2017. Compliance with this asset cap is measured on a two-quarter daily average basis to allow for management of temporary fluctuations. Due to the COVID-19 pandemic, on April 8, 2020, the FRB amended the consent order to allow the Company to exclude from the asset cap any on-balance sheet exposure resulting from loans made by the Company in connection with the Small Business Administration’s Paycheck Protection Program and the FRB’s Main Street Lending Program. As required under the amendment to the consent order, to the extent the Company chooses to exclude these exposures from the asset cap, certain fees and other economic benefits received by the Company from loans made in connection with these programs shall be transferred to the U.S. Treasury or to non-profit organizations approved by the FRB that support small businesses. As of June 30, 2021, the Company had not excluded these exposures from the asset cap. After removal of the asset cap, a second third-party review must also be conducted to assess the efficacy and sustainability of the enhancements and improvements.

Consent Orders with the Consumer Financial Protection Bureau and Office of the Comptroller of the Currency Regarding Compliance Risk Management Program, Automobile Collateral Protection Insurance Policies, and Mortgage Interest Rate Lock Extensions

On April 20, 2018, the Company entered into consent orders with the Consumer Financial Protection Bureau (CFPB) and the Office of the Comptroller of the Currency (OCC) to pay an aggregate of \$1 billion in civil money penalties to resolve matters regarding the Company’s compliance risk management program and past practices involving certain automobile collateral protection insurance (CPI) policies and certain mortgage interest rate lock extensions. As required by the consent orders, the Company submitted to the CFPB and OCC an enterprise-wide compliance risk management plan and a plan to enhance the Company’s internal audit program with respect to federal consumer financial law and the terms of the consent orders. In addition, as required by the consent orders, the Company submitted for non-objection plans to remediate customers affected by the automobile collateral protection insurance and mortgage interest rate lock matters, as well as a plan for the management of remediation activities conducted by the Company. The Company continues to work to address the provisions of the consent orders. The Company has not yet satisfied certain aspects of the consent orders, and as a result, we believe regulators may impose additional penalties or take other enforcement actions.

Overview (continued)

Retail Sales Practices Matters

In September 2016, we announced settlements with the CFPB, the OCC, and the Office of the Los Angeles City Attorney, and entered into related consent orders with the CFPB and the OCC, in connection with allegations that some of our retail customers received products and services they did not request. As a result, it remains a top priority to rebuild trust through a comprehensive action plan that includes making things right for our customers, employees, and other stakeholders, and building a better Company for the future. Our priority of rebuilding trust has included numerous actions focused on identifying potential financial harm to customers resulting from these matters and providing remediation.

For additional information regarding retail sales practices matters, including related legal matters, see the “Risk Factors” section in our 2020 Form 10-K and Note 13 (Legal Actions) to Financial Statements in this Report.

Other Customer Remediation Activities

Our priority of rebuilding trust has also included an effort to identify other areas or instances where customers may have experienced financial harm, provide remediation as appropriate, and implement additional operational and control procedures. We are working with our regulatory agencies in this effort. We have previously disclosed key areas of focus as part of our rebuilding trust efforts and are in the process of providing remediation for those matters. We have accrued for the probable and estimable remediation costs related to our rebuilding trust efforts, which amounts may change based on additional facts and information, as well as ongoing reviews and communications with our regulators.

As our ongoing reviews continue, it is possible that in the future we may identify additional items or areas of potential concern. To the extent issues are identified, we will continue to assess any customer harm and provide remediation as appropriate. For additional information, including related legal and regulatory risk, see the “Risk Factors” section in our 2020 Form 10-K and Note 13 (Legal Actions) to Financial Statements in this Report.

Recent Developments

Change in Accounting Policies

In second quarter 2021, we retroactively changed the accounting for certain tax-advantaged investments to better align the financial statement presentation with the economic impact of these investments.

Specifically, we elected to change our accounting for low-income housing tax credit investments from the equity method of accounting to the proportional amortization method. Under the proportional amortization method, the amortization of the investments and the related tax impacts are recognized in income tax expense. Previously, we recognized the amortization of the investments in other noninterest income and the related tax impacts were recognized in income tax expense.

Also, we elected to change the presentation of investment tax credits related to solar energy investments. We reclassified the investment tax credits on our consolidated balance sheet from accrued expenses and other liabilities to a reduction of the carrying value of the investment balances. We also reclassified the investment tax credits from income tax expense to interest income for solar energy leases or noninterest income for solar energy equity investments.

These changes had a nominal impact on net income and retained earnings on an annual basis; however, our quarterly results were affected in both the second and third quarters of

2020 due to the impact of these changes on the estimated annual effective income tax rate applied to each quarter. These changes also improved our efficiency ratio and generally increased our effective income tax rate from what was previously reported.

Prior period financial statement line items have been revised to conform with the current period presentation. Prior period risk-based capital and certain other regulatory related metrics were not revised. For additional information, including the financial statement line items impacted by these changes, see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in this Report.

COVID-19 Pandemic

In response to the COVID-19 pandemic, we have been working diligently to protect employee safety while continuing to carry out Wells Fargo’s role as a provider of essential services to the public. We have taken comprehensive steps to help customers, employees and communities.

We have strong levels of capital and liquidity, and we remain focused on delivering for our customers and communities to get through these unprecedented times.

PAYCHECK PROTECTION PROGRAM The Coronavirus Aid, Relief, and Economic Security Act (CARES Act) created funding for the Small Business Administration’s (SBA) loan program providing forgiveness of up to the full principal amount of qualifying loans guaranteed under a program called the Paycheck Protection Program (PPP). Since its inception, we have funded approximately 282,000 loans under the PPP totaling approximately \$14.0 billion, and more than \$5.8 billion of principal forgiveness has been provided on qualifying PPP loans. We deferred approximately \$420 million of SBA processing fees in 2020 that will be recognized as interest income over the terms of the loans. We voluntarily committed to donate all of the gross processing fees received from PPP loans funded in 2020. Through June 30, 2021, we donated approximately \$260 million of these processing fees. We funded approximately \$3.5 billion of PPP loans in the first half of 2021 and deferred approximately \$270 million of related SBA processing fees that will be recognized as interest income over the terms of the loans. We have committed to donate any net profits from processing fees received from PPP loans funded in 2021. For additional information on the CARES Act and the PPP, see the “Overview – Recent Developments – COVID-19 Pandemic” section in our 2020 Form 10-K.

LIBOR Transition

The London Interbank Offered Rate (LIBOR) is a widely-referenced benchmark rate, which is published in five currencies and a range of tenors, and seeks to estimate the cost at which banks can borrow on an unsecured basis from other banks. On March 5, 2021, the Financial Conduct Authority and the administrator of LIBOR announced that LIBOR will no longer be published on a representative basis after December 31, 2021, with the exception of the most commonly used tenors of U.S. dollar (USD) LIBOR which will no longer be published on a representative basis after June 30, 2023. Federal banking agencies have issued guidance strongly encouraging banking organizations to cease using USD LIBOR as a reference rate in new contracts as soon as practicable and in any event by December 31, 2021.

For information on the amount of our LIBOR-linked assets and liabilities, as well as initiatives created by our LIBOR Transition Office in an effort to mitigate the risks associated with

a transition away from LIBOR, see the “Overview – Recent Developments – LIBOR Transition” section in our 2020 Form 10-K. For information regarding the risks and potential impact of LIBOR or any other referenced financial metric being significantly changed, replaced or discontinued, see the “Risk Factors” section in our 2020 Form 10-K.

Capital Actions and Restrictions

In June 2021, the Company completed the 2021 Comprehensive Capital Analysis and Review (CCAR) stress test process. We expect our stress capital buffer (SCB) for the period October 1, 2021, through September 30, 2022, to be 3.10%. The FRB has indicated it will publish our final SCB by August 31, 2021.

On July 27, 2021, the Board approved an increase to the Company's third quarter 2021 common stock dividend to \$0.20 per share. Additionally, our capital plan includes gross common share repurchases of approximately \$18 billion for the four-quarter period beginning third quarter 2021 through second quarter 2022.

For additional information about capital planning, see the “Capital Management – Capital Planning and Stress Testing” section in this Report.

Financial Performance

NM – Not meaningful

In second quarter 2021, we generated \$6.0 billion of net income and diluted earnings per common share (EPS) of \$1.38, compared with a net loss of \$3.8 billion and diluted loss per common share of \$1.01 in the same period a year ago. Financial performance for second quarter 2021, compared with the same period a year ago, included the following:

- total revenue increased due to higher net gains from equity securities and mortgage banking income, partially offset by lower net interest income;
- provision for credit losses decreased reflecting lower net charge-offs and improvements in the economic environment;
- noninterest expense decreased due to lower operating losses and lower professional and outside services expense;
- average loans decreased due to paydowns exceeding originations in the residential mortgage and credit card portfolios, weak demand for commercial loans, and the reclassification of student loans, included in other consumer loans, to loans held for sale after the announced sale of the portfolio in fourth quarter 2020; and
- average deposits increased driven by growth in consumer deposits in the Consumer Banking and Lending and Wealth

In June 2021, we redeemed the remaining \$350 million of our Non-Cumulative Perpetual Class A Preferred Stock, Series N. In July 2021, we issued \$1.25 billion of our Preferred Stock, Series DD.

Business and Portfolio Divestitures

On February 23, 2021, we announced an agreement to sell Wells Fargo Asset Management for a purchase price of \$2.1 billion. As part of the transaction, we will own a 9.9% equity interest and continue to serve as a client and distribution partner. On March 23, 2021, we announced an agreement to sell our Corporate Trust Services business for a purchase price of \$750 million. Both transactions are expected to close in the second half of 2021, subject to customary closing conditions.

In the first half of 2021, we completed substantially all of the previously announced sale of our student loan portfolio, which resulted in gains in other noninterest income of \$208 million and \$147 million in first and second quarter 2021, respectively, and goodwill write-downs in other noninterest expense of \$104 million and \$79 million in first and second quarter 2021, respectively.

and Investment Management (WIM) operating segments due to higher levels of liquidity and savings for consumer customers reflecting government stimulus programs and payment deferral programs, as well as continued economic uncertainty associated with the COVID-19 pandemic, partially offset by actions taken to manage under the asset cap which reduced deposits in the Corporate and Investment Banking operating segment and Corporate.

In the first half of 2021, we generated \$10.7 billion of net income and diluted EPS of \$2.40, compared with a net loss of \$2.9 billion and diluted loss per common share of \$0.94 in the same period a year ago. Financial performance for the first half of 2021, compared with the same period a year ago, included the following:

- total revenue increased due to higher net gains from equity securities and mortgage banking income, partially offset by lower net interest income;
- provision for credit losses decreased reflecting lower net charge-offs due to better portfolio credit quality driven by improvements in the economic environment;

Overview (continued)

- noninterest expense decreased due to lower operating losses and lower professional and outside services expense, partially offset by higher personnel expense;
- average loans decreased due to paydowns exceeding originations in the residential mortgage and credit card portfolios, weak demand for commercial loans, and the reclassification of student loans, included in other consumer loans, to loans held for sale after the announced sale of the portfolio in fourth quarter 2020; and
- average deposits increased driven by growth in consumer deposits in the Consumer Banking and Lending and Wealth and Investment Management (WIM) operating segments due to higher levels of liquidity and savings for consumer customers reflecting government stimulus programs and payment deferral programs, as well as continued economic uncertainty associated with the COVID-19 pandemic, partially offset by actions taken to manage under the asset cap which reduced deposits in the Corporate and Investment Banking operating segment and Corporate.

Capital and Liquidity

We maintained a strong capital position in the first half of 2021, with total equity of \$193.1 billion at June 30, 2021, compared with \$185.7 billion at December 31, 2020. Our liquidity and regulatory capital ratios remained strong at June 30, 2021, including:

- our liquidity coverage ratio (LCR) was 123%, which continued to exceed the regulatory minimum of 100%;
- our Common Equity Tier 1 (CET1) ratio was 12.07%, which continued to exceed both the regulatory requirement of 9% and our current internal target; and
- our eligible external total loss absorbing capacity (TLAC) as a percentage of total risk-weighted assets was 25.11%, compared with the regulatory requirement of 21.50%.

See the “Capital Management” and the “Risk Management – Asset/Liability Management – Liquidity Risk and Funding” sections in this Report for additional information regarding our capital and liquidity, including the calculation of our regulatory capital and liquidity amounts.

Earnings Performance

Wells Fargo net income for second quarter 2021 was \$6.0 billion (\$1.38 diluted EPS), compared with a net loss of \$3.8 billion (\$1.01 diluted loss per common share) in the same period a year ago. Net income increased in second quarter 2021, compared with the same period a year ago, predominantly due to a \$10.8 billion decrease in provision for credit losses, a \$3.1 billion increase in noninterest income, and a \$1.2 billion decrease in noninterest expense, partially offset by a \$3.4 billion increase in income tax expense and a \$1.1 billion decrease in net interest income.

Net income for the first half of 2021 was \$10.7 billion (\$2.40 diluted EPS), compared with a net loss of \$2.9 billion (\$0.94 diluted loss per common share) in the same period a year ago. Net income increased in the first half of 2021, compared with the same period a year ago, predominantly due to a \$15.8 billion decrease in provision for credit losses and a \$6.0 billion increase in noninterest income, partially offset by a \$4.0 billion increase in income tax expense and a \$3.6 billion decrease in net interest income.

Credit Quality

Credit quality reflected the improving economic environment.

- The allowance for credit losses (ACL) for loans of \$16.4 billion at June 30, 2021, decreased \$3.3 billion from December 31, 2020.
- Our provision for credit losses for loans was \$(2.4) billion in the first half of 2021, down from \$13.4 billion in the same period a year ago. The decrease in the ACL for loans and the provision for credit losses in the first half of 2021, compared with the same period a year ago, reflected improvements in current and forecasted economic conditions.
- The allowance coverage for total loans was 1.92% at June 30, 2021, compared with 2.22% at December 31, 2020.
- Commercial portfolio net loan charge-offs were \$80 million, or 7 basis points of average commercial loans, in second quarter 2021, compared with net loan charge-offs of \$602 million, or 44 basis points, in the same period a year ago, predominantly driven by lower losses in our commercial and industrial portfolio primarily within the oil, gas and pipelines industry, and in the real estate mortgage portfolio.
- Consumer portfolio net loan charge-offs were \$301 million, or 32 basis points of average consumer loans, in second quarter 2021, compared with net loan charge-offs of \$511 million, or 48 basis points, in the same period a year ago, driven by lower losses in all consumer loan portfolios as a result of payment deferral activities, government stimulus programs instituted in response to the COVID-19 pandemic, and the sale of a portion of our student loan portfolio.
- Nonperforming assets (NPAs) of \$7.5 billion at June 30, 2021, decreased \$1.4 billion, or 16%, from December 31, 2020, predominantly driven by decreases in our commercial and industrial portfolio reflecting improvements in the economic environment, and decreases in our residential mortgage portfolios reflecting loan sales and payment deferral activities. NPAs represented 0.88% of total loans at June 30, 2021.

Net Interest Income

Net interest income and net interest margin decreased in both the second quarter and first half of 2021, compared with the same periods a year ago, due to the impact of lower interest rates and lower loan balances reflecting soft demand and elevated prepayments, as well as higher mortgage-backed securities premium amortization, partially offset by a reduction in long-term debt. The first half of 2021 was also impacted by unfavorable hedge ineffectiveness accounting results.

Table 1 presents the individual components of net interest income and the net interest margin. Net interest income and net interest margin are presented on a taxable-equivalent basis in Table 1 to consistently reflect income from taxable and tax-exempt loans and debt and equity securities based on a 21% federal statutory tax rate for the periods ended June 30, 2021 and 2020.

For additional information about net interest income and net interest margin, see the “Earnings Performance – Net Interest Income” section in our 2020 Form 10-K.

NM – Not meaningful

Second quarter 2021 vs. second quarter 2020

Deposit-related fees increased driven by:

- lower fee waivers and reversals compared with a second quarter 2020 that included elevated fee waivers due to our actions to support customers during the COVID-19 pandemic; and
- higher treasury management fees on commercial accounts driven by an increase in transaction service volumes and repricing.

Investment advisory and other asset-based fees increased reflecting higher market valuations on client investment assets.

For additional information on certain client investment assets, see the “Earnings Performance – Operating Segment Results – Wealth and Investment Management – WIM Advisory Assets” and “Earnings Performance – Operating Segment Results – Corporate – Wells Fargo Asset Management (WFAM) Assets Under Management” sections in this Report.

Card fees increased reflecting higher interchange fees, net of rewards, driven by increased purchase and transaction volumes.

Servicing income, net increased due to:

- higher income from mortgage servicing right (MSR) valuation changes and related hedges driven by negative valuation adjustments in second quarter 2020 for higher expected servicing costs and prepayment estimates due to changes in economic conditions;

partially offset by:

- lower servicing fees due to a lower balance of loans serviced for others resulting from prepayments.

Net gains on mortgage loan originations/sales increased driven by:

- higher gains related to the re-securitization of loans we purchased from Government National Mortgage Association (GNMA) loan securitization pools in 2020; and

- higher residential real estate held for sale (HFS) origination volumes in our retail production channel;

partially offset by:

- lower HFS origination volumes in our correspondent production channel; and
- lower margins in our retail and correspondent production channels.

For additional information on servicing income and net gains on mortgage loan originations/sales, see Note 9 (Mortgage Banking Activities) to Financial Statements in this Report.

Net gains from trading activities decreased driven by fewer gains in asset-backed finance and credit products due to limited credit spread movement compared with a second quarter 2020 that reflected gains driven by volatility in credit spreads from the impact of the COVID-19 pandemic.

Net gains on debt securities decreased due to lower gains from fewer sales of agency mortgage-backed securities (MBS) and municipal bonds.

Net gains (losses) from equity securities increased driven by:

- higher unrealized gains on nonmarketable equity securities from our affiliated venture capital and private equity businesses; and
- higher realized gains on the sales of equity securities;

partially offset by:

- lower gains on deferred compensation plan investments (largely offset in personnel expense). Refer to Table 3a for the results for our deferred compensation plan and related hedges.

Other income decreased due to:

- lower gains on the sales of residential mortgage loans which were reclassified to held for sale in 2019; and
- higher valuation losses related to the retained litigation risk, including the timing and amount of final settlement, associated with shares of Visa Class B common stock that

Earnings Performance (continued)

we sold. For additional information, see the “Risk Management – Asset/Liability Management – Market Risk – Equity Securities” section in our 2020 Form 10-K; partially offset by:

- a gain on the sale of a portion of our student loan portfolio.

First half of 2021 vs. first half of 2020

Investment advisory and other asset-based fees increased reflecting higher market valuations on client investment assets.

For additional information on certain client investment assets, see the “Earnings Performance – Operating Segment Results – Wealth and Investment Management – WIM Advisory Assets” and “Earnings Performance – Operating Segment Results – Corporate – Wells Fargo Asset Management (WFAM) Assets Under Management” sections in this Report.

Investment banking fees increased driven by higher loan syndication fees, advisory fees, and equity underwriting fees.

Card fees increased reflecting higher interchange fees, net of rewards, driven by increased purchase and transaction volumes.

Servicing income, net increased reflecting:

- higher income from MSR valuation changes and related hedges driven by negative valuation adjustments to the MSR in the first half of 2020 for higher expected servicing costs and prepayment estimates due to changes in economic conditions;
- partially offset by:
- lower servicing fees due to a lower balance of loans serviced for others resulting from prepayments.

Net gains on mortgage loan originations/sales increased driven by:

- higher margins in our retail production channel;
- higher HFS origination volume in our retail production channel;
- higher gains related to the re-securitization of loans we purchased from GNMA loan securitization pools in 2020; and
- higher gains due to losses in the first half of 2020 driven by the impact of interest rate volatility on hedging activities associated with our residential mortgage loans held for sale portfolio and pipeline, as well as valuation losses on certain residential and commercial loans held for sale due to market conditions.

For additional information on servicing income and net gains on mortgage loan originations/sales, see Note 9 (Mortgage Banking Activities) to Financial Statements in this Report.

Net gains from trading activities decreased reflecting:

- lower client trading activity for interest rate products, equities, and commodities;
- partially offset by:
- higher client trading activity for asset-backed finance products.

Net gains on debt securities decreased due to lower gains from fewer sales of agency MBS and municipal bonds.

Net gains (losses) from equity securities increased driven by:

- higher unrealized gains on nonmarketable equity securities from our affiliated venture capital and private equity businesses;
- lower impairment on equity securities due to the market impact of the COVID-19 pandemic in first quarter 2020;
- higher realized gains on the sales of equity securities; and
- higher gains on deferred compensation plan investments (largely offset in personnel expense). Refer to Table 3a for the results for our deferred compensation plan and related hedges.

Other income decreased due to:

- lower gains on the sales of residential mortgage loans which were reclassified to held for sale in 2019; and
 - higher valuation losses related to the retained litigation risk, including the timing and amount of final settlement, associated with shares of Visa Class B common stock that we sold. For additional information, see the “Risk Management – Asset/Liability Management – Market Risk – Equity Securities” section in our 2020 Form 10-K;
- partially offset by:
- a gain on the sale of substantially all of our student loan portfolio; and
 - higher income from investments accounted for under the equity method.

Noninterest Expense

Table 3: Noninterest Expense

(in millions)	Quarter ended June 30,				Six months ended June 30,

NM – Not meaningful

(1) Represents expenses for assets we lease to customers.

Second quarter 2021 vs. second quarter 2020

Personnel expense decreased driven by:

- lower salaries as a result of reduced headcount; and
- lower deferred compensation expense;

partially offset by:

- higher incentive compensation expense, including the impact of higher market valuations on stock-based compensation; and
- higher revenue-related compensation expense.

Technology, telecommunications and equipment expense

increased due to higher expense for technology contracts and the reversal of a software licensing liability accrual in second quarter 2020.

Occupancy expense decreased driven by:

- lower rent expense; and
- lower cleaning fees, supplies, and equipment expenses compared with a second quarter 2020 that included higher expenses due to the COVID-19 pandemic.

Operating losses decreased driven by lower expense for litigation accruals and customer remediation accruals.

Professional and outside services expense decreased driven by efficiency initiatives to reduce our spending on consultants and contractors.

Table 3a: Deferred Compensation and Related Hedges

(in millions)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Net interest income	\$ —	3	\$ —	15
Net gains (losses) from equity securities	1	346	1	(275)
Total revenue (losses) from deferred compensation plan investments	1	349	1	(260)
Decrease (increase) in deferred compensation plan liabilities	(257)	(490)	(422)	108
Net derivative gains from economic hedges of deferred compensation	239	141	399	141
Decrease (increase) in personnel expense	(18)	(349)	(23)	249
Loss before income tax expense	\$ (17)	—	\$ (22)	(11)

Technology, telecommunications and equipment expense increased due to higher expense for technology contracts and

the reversal of a software licensing liability accrual in second quarter 2020.

Earnings Performance (continued)

Occupancy expense decreased driven by:

- lower rent expense; and
- lower cleaning fees, supplies, and equipment expenses compared with a first half of 2020 that included higher expenses due to the COVID-19 pandemic.

Operating losses decreased driven by lower expense for litigation accruals and customer remediation accruals.

Professional and outside services expense decreased driven by efficiency initiatives to reduce our spending on consultants and contractors.

Advertising and promotion expense decreased driven by a continued reduction in marketing and brand campaign volumes due to the impact of the COVID-19 pandemic.

Restructuring charges increased related to our efficiency initiatives that began in third quarter 2020. For additional information on restructuring charges, see Note 19 (Restructuring Charges) to Financial Statements in this Report.

Other expenses increased driven by:

- a write-down of goodwill in the first half of 2021 related to the sale of substantially all of our student loan portfolio;
- higher charitable donations expense driven by the donation of PPP processing fees; and
- higher Federal Deposit Insurance Corporation (FDIC) deposit assessment expense driven by a higher assessment rate;

partially offset by:

- a reduction in business travel and company events due to the impact of the COVID-19 pandemic.

Income Tax Expense

Income tax expense was \$1.4 billion in second quarter 2021, compared with an income tax benefit of \$2.0 billion in the same period a year ago. The effective income tax rate was 19.3% for second quarter 2021, compared with 34.2% for the same period a year ago.

Income tax expense was \$2.3 billion in the first half of 2021, compared with an income tax benefit of \$1.6 billion in the same period a year ago. The effective income tax rate was 18.0% for the first half of 2021, compared with 36.0% for the same period a year ago.

The increase in our income tax expense for both the second quarter and first half of 2021, compared with the same periods a year ago, was driven by higher pre-tax income, including the impact of the changes in accounting policy for certain tax-advantaged investments. For additional information on the changes in accounting policy, see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in this Report.

Operating Segment Results

Our management reporting is organized into four reportable operating segments: Consumer Banking and Lending; Commercial Banking; Corporate and Investment Banking; and Wealth and Investment Management. All other business activities that are not included in the reportable operating segments have been included in Corporate. For additional information, see Table 4. We define our reportable operating segments by type of product and customer segment, and their results are based on our management reporting process. The management reporting process measures the performance of the reportable operating segments based on the Company's management structure, and the results are regularly reviewed by our Chief Executive Officer and Operating Committee. The management reporting process is based on U.S. GAAP and includes specific adjustments, such as funds transfer pricing for asset/liability management, shared revenues and expenses, and taxable-equivalent adjustments to consistently reflect income from taxable and tax-exempt sources, which allows management to assess performance consistently across the operating segments.

In March 2021, we announced an agreement to sell our Corporate Trust Services business and, in second quarter 2021, we moved the business from the Commercial Banking operating segment to Corporate. Prior period balances have been revised to conform with the current period presentation. This change did not impact the previously reported consolidated financial results of the Company.

In second quarter 2021, we elected to change our accounting method for low-income housing tax credit (LIHTC) investments and elected to change the presentation of investment tax credits related to solar energy investments. These accounting policy changes had a nominal impact on reportable operating segment results. Prior period financial statement line items for the Company, as well as for the reportable operating segments, have been revised to conform with the current period presentation. Our LIHTC investments are included in the Corporate and Investment Banking operating segment and our solar energy investments are included in the Commercial Banking operating segment. For additional information, see the "Recent Developments" section and Note 1 (Summary of Significant Accounting Policies) to Financial Statements in this Report.

Funds Transfer Pricing Corporate treasury manages a funds transfer pricing methodology that considers interest rate risk, liquidity risk, and other product characteristics. Operating segments pay a funding charge for their assets and receive a funding credit for their deposits, both of which are included in net interest income. The net impact of the funding charges or credits is recognized in corporate treasury.

Revenue and Expense Sharing When lines of business jointly serve customers, the line of business that is responsible for providing the product or service recognizes revenue or expense with a referral fee paid or an allocation of cost to the other line of business based on established internal revenue-sharing agreements.

When a line of business uses a service provided by another line of business or enterprise function (included in Corporate), expense is generally allocated based on the cost and use of the service provided.

Taxable-Equivalent Adjustments Taxable-equivalent adjustments related to tax-exempt income on certain loans and debt securities are included in net interest income, while taxable-equivalent adjustments related to income tax credits for low-income housing and renewable energy investments are included in noninterest income, in each case with corresponding impacts to income tax expense (benefit). Adjustments are included in Corporate, Commercial Banking, and Corporate and Investment Banking and are eliminated to reconcile to the Company's consolidated financial results.

Allocated Capital Reportable operating segments are allocated capital under a risk-sensitive framework that is primarily based on aspects of our regulatory capital requirements, and the assumptions and methodologies used to allocate capital are periodically assessed and revised. Management believes that return on allocated capital is a useful financial measure because it enables management, investors, and others to assess a reportable operating segment's use of capital.

Selected Metrics We present certain financial and nonfinancial metrics that management uses when evaluating reportable operating segment results. Management believes that these metrics are useful to investors and others to assess the performance, customer growth, and trends of reportable operating segments or lines of business.

Table 4: Management Reporting Structure

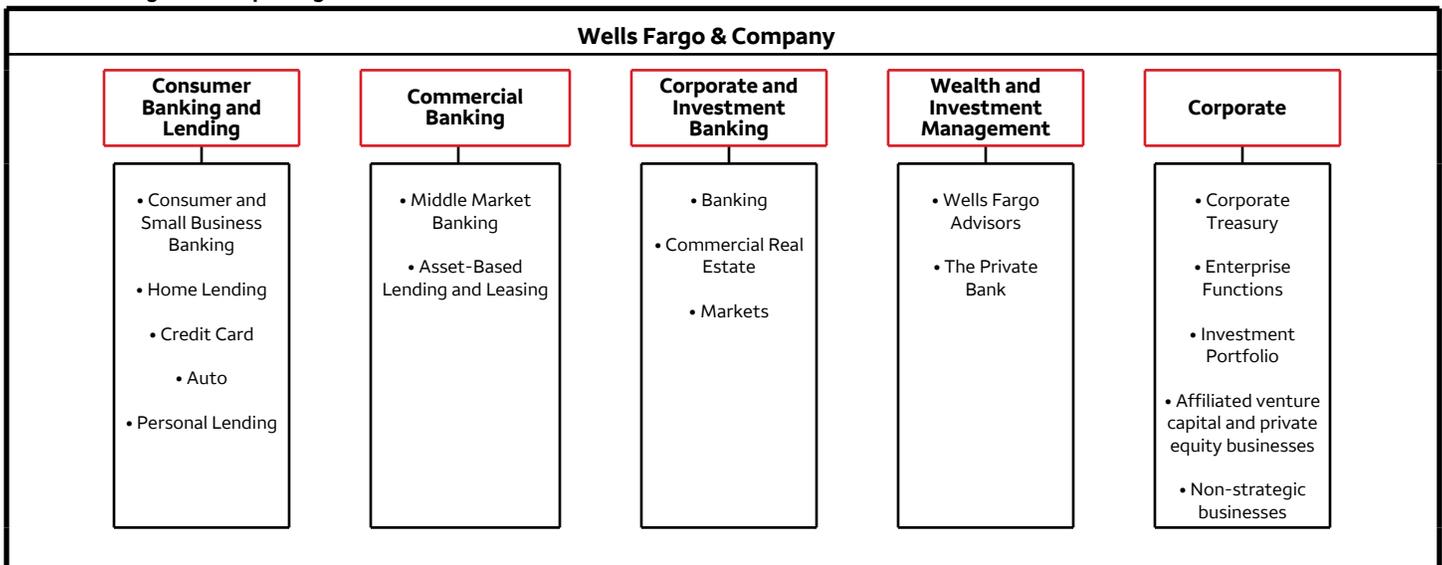

Table 5 and the following discussion present our results by reportable operating segment. For additional information, see Note 22 (Operating Segments) to Financial Statements in this Report.

(1) All other business activities that are not included in the reportable operating segments have been included in Corporate. For additional information, see the "Corporate" section below. In March 2021, we announced an agreement to sell our Corporate Trust Services business and, in second quarter 2021, we moved the business from the Commercial Banking operating segment to Corporate. Prior period balances have been revised to conform with the current period presentation.

(2) Taxable-equivalent adjustments related to tax-exempt income on certain loans and debt securities are included in net interest income, while taxable-equivalent adjustments related to income tax credits for low-income housing and renewable energy investments are included in noninterest income, in each case with corresponding impacts to income tax expense (benefit). Adjustments are included in Corporate, Commercial Banking, and Corporate and Investment Banking and are eliminated to reconcile to the Company's consolidated financial results.

Consumer Banking and Lending offers diversified financial products and services for consumers and small businesses with annual sales generally up to \$5 million. These financial products and services include checking and savings accounts, credit and

debit cards, as well as home, auto, personal, and small business lending. Table 5a and Table 5b provide additional information for Consumer Banking and Lending.

NM – Not meaningful

- Return on allocated capital is segment net income (loss) applicable to common stock divided by segment average allocated capital. Segment net income (loss) applicable to common stock is segment net income (loss) less allocated preferred stock dividends.
- Efficiency ratio is segment noninterest expense divided by segment total revenue (net interest income and noninterest income).
- Digital and mobile active customers is the number of consumer and small business customers who have logged on via a digital or mobile device, respectively, in the prior 90 days. Digital active customers includes both online and mobile customers.
- Deposit spread is (i) the internal funds transfer pricing credit on segment deposits minus interest paid to customers for segment deposits, divided by (ii) average segment deposits.
- Debit card purchase volume and transactions reflect combined activity for both consumer and business debit card purchases.
- Excludes residential mortgage loans subserviced for others.
- Excludes residential mortgage loans insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA) and loans held for sale.
- Beginning in second quarter 2020, customer payment deferral activities instituted in response to the COVID-19 pandemic may have delayed the recognition of delinquencies for those customers who would have otherwise moved into past due status.
- Excludes certain private label new account openings.

Second quarter 2021 vs. second quarter 2020

Revenue increased driven by:

- higher mortgage banking noninterest income due to higher gains related to the re-securitization of loans we purchased from GNMA loan securitization pools in 2020, as well as higher income from MSR valuation changes and related hedges;
- higher card fees reflecting higher interchange fees, net of rewards, driven by increased purchase and transaction volumes; and
- higher deposit-related fees driven by lower fee waivers and reversals compared with a second quarter 2020 that included elevated fee waivers due to our actions to support customers during the COVID-19 pandemic;

partially offset by:

- lower net interest income reflecting the lower interest rate environment and lower loan balances; and
- lower other income driven by lower gains on loan sales.

Provision for credit losses decreased driven by an improving economic environment.

Noninterest expense decreased driven by:

- lower operating losses due to lower expense for litigation accruals and customer remediation accruals;
- lower personnel expense driven by additional payments in second quarter 2020 for certain customer-facing and support employees and for back-up child care services, as well as lower branch staffing expense in second quarter 2021 related to efficiency initiatives in Consumer and Small Business Banking, partially offset by higher revenue-related compensation in Home Lending; and
- lower expense allocated from enterprise functions, reflecting risk management and technology support related expenses;

partially offset by:

- higher charitable donations expense due to the donation of PPP processing fees; and
- higher FDIC deposit assessment expense driven by a higher assessment rate.

First half of 2021 vs. first half of 2020

Revenue increased driven by:

- higher mortgage banking noninterest income due to higher retail HFS origination volumes and margins, and higher income from MSR valuation changes and related hedges; and
- higher card fees reflecting higher interchange fees, net of rewards, driven by increased purchase and transaction volumes, partially offset by lower late fees due to higher payment rates;

partially offset by:

- lower net interest income reflecting the lower interest rate environment and lower loan balances;
- lower other income driven by lower gains on loan sales; and
- lower deposit-related fees driven by higher fee waivers and reversals, as well as higher average consumer deposit account balances due to the economic slowdown associated with the COVID-19 pandemic.

Provision for credit losses decreased driven by an improving economic environment.

Noninterest expense decreased driven by:

- lower operating losses due to lower expense for litigation accruals and customer remediation accruals;
- lower personnel expense driven by a first half of 2020 that included additional payments for certain customer-facing and support employees and for back-up child care services, as well as lower branch staffing expense in the first half of 2021 related to efficiency initiatives in Consumer and Small Business Banking, partially offset by higher revenue-related compensation in Home Lending; and
- lower advertising and promotion expense;

partially offset by:

- higher charitable donations expense due to the donation of PPP processing fees;
- higher FDIC deposit assessment expense driven by a higher assessment rate; and
- higher expense allocated from enterprise functions, reflecting risk management and technology support related expenses.

Total deposits	840,434	746,602	93,832	13	840,434	746,602	93,832	13

Second quarter 2021 vs. second quarter 2020

Total loans (average) decreased as paydowns exceeded originations. Home lending loan balances were also impacted by actions taken to suspend certain non-conforming residential mortgage and home equity originations.

Total deposits (average) increased driven by higher levels of liquidity and savings for consumer customers reflecting government stimulus programs and payment deferral programs, as well as continued economic uncertainty associated with the COVID-19 pandemic.

First half of 2021 vs. first half of 2020

Total loans (average and period-end) decreased as paydowns exceeded originations. Home lending loan balances were also impacted by actions taken to suspend certain non-conforming residential mortgage and home equity originations.

Total deposits (average and period-end) increased driven by higher levels of liquidity and savings for consumer customers reflecting government stimulus programs and payment deferral programs, as well as continued economic uncertainty associated with the COVID-19 pandemic.

Earnings Performance (continued)

Commercial Banking provides financial solutions to private, family owned and certain public companies. Products and services include banking and credit products across multiple industry sectors and municipalities, secured lending and lease products, and treasury management. In March 2021, we announced an agreement to sell our Corporate Trust Services

business and, in second quarter 2021, we moved the business from the Commercial Banking operating segment to Corporate. Prior period balances have been revised to conform with the current period presentation. Table 5c and Table 5d provide additional information for Commercial Banking.

NM – Not meaningful

Second quarter 2021 vs. second quarter 2020

Revenue decreased driven by:

- lower net interest income reflecting lower loan balances and the lower interest rate environment;

partially offset by:

- higher other noninterest income due to gains on equity securities and higher income from renewable energy investments; and
- higher deposit-related fees due to higher treasury management fees, driven by an increase in transaction service volumes and repricing.

Provision for credit losses decreased driven by an improving economic environment.

Noninterest expense decreased driven by:

- lower spending related to efficiency initiatives, including lower personnel expense from reduced headcount;
- lower lease expense reflecting a reduction in the size of the operating lease asset portfolio;
- lower professional and outside services expense reflecting decreased project-related expense; and
- lower expenses allocated from enterprise functions, including lower technology expenses.

First half of 2021 vs. first half of 2020

Revenue decreased driven by:

- lower net interest income reflecting the lower interest rate environment and lower loan balances; and
- lower lease income reflecting a reduction in the size of the operating lease asset portfolio;

partially offset by:

- higher other noninterest income due to gains on equity securities, impairments on equity securities in first quarter 2020, and higher income from renewable energy investments; and
- higher deposit-related fees due to higher treasury management fees, driven by a lower earnings credit rate due to the lower interest rate environment and repricing.

Provision for credit losses decreased driven by an improving economic environment.

Noninterest expense decreased driven by:

- lower spending related to efficiency initiatives, including lower personnel expense from reduced headcount;
- lower lease expense reflecting a reduction in the size of the operating lease asset portfolio; and
- lower professional and outside services expense reflecting decreased project-related expense;

partially offset by:

- higher expenses due to lower allocations of shared expenses with other lines of business.

Second quarter 2021 vs. second quarter 2020

Total loans (average) decreased driven by lower loan demand, including lower line utilization, and higher paydowns reflecting continued high levels of client liquidity and strength in the capital markets.

Total deposits (average) increased due to higher levels of liquidity and lower investment spending reflecting government stimulus programs and continued economic uncertainty associated with the COVID-19 pandemic.

First half of 2021 vs. first half of 2020

Total loans (average and period-end) decreased driven by lower loan demand, including lower line utilization, and higher paydowns reflecting continued high levels of client liquidity and strength in the capital markets.

Total deposits (average and period-end) increased due to higher levels of liquidity and lower investment spending reflecting government stimulus programs and continued economic uncertainty associated with the COVID-19 pandemic.

Earnings Performance (continued)

Corporate and Investment Banking delivers a suite of capital markets, banking, and financial products and services to corporate, commercial real estate, government and institutional clients globally. Products and services include corporate banking, investment banking, treasury management, commercial real

estate lending and servicing, equity and fixed income solutions, as well as sales, trading, and research capabilities. Table 5e and Table 5f provide additional information for Corporate and Investment Banking.

NM – Not meaningful

Second quarter 2021 vs. second quarter 2020

Revenue decreased driven by:

- lower net gains from trading activities reflecting fewer gains in asset-backed finance and credit products due to limited credit spread movement compared with a second quarter 2020 that reflected gains driven by volatility in credit spreads from the impact of the COVID-19 pandemic; and
- lower net interest income reflecting the lower interest rate environment, lower deposit balances, and lower trading-related assets;

partially offset by:

- higher other noninterest income driven by higher mortgage banking income due to higher servicing income, reflecting a reversal of an impairment of commercial MSR's in second quarter 2021, compared with the related impairment recorded in second quarter 2020, as well as higher gains on the sales of mortgage loans;
- higher income from low income housing and equity investments; and

- higher deposit and lending-related fees reflecting growth in treasury management service charges and increased commitment fees related to revolver utilization.

Provision for credit losses decreased driven by an improving economic environment.

Noninterest expense decreased driven by:

- lower operating losses due to lower expense for litigation accruals and customer remediation accruals; and
 - lower expenses allocated from enterprise functions reflecting lower spending due to efficiency initiatives;
- partially offset by:
- higher personnel expense driven by higher incentive compensation.

First half of 2021 vs. first half of 2020

Revenue decreased driven by:

- lower net gains from trading activities driven by lower client trading activity for interest rate products, equities, and commodities, partially offset by higher client trading activity for asset-backed finance products; and
- lower net interest income reflecting the lower interest rate environment, lower deposit balances, and lower trading-related assets;

partially offset by:

- higher investment banking fees due to higher loan syndication fees, advisory fees, and equity underwriting fees;
- higher other noninterest income driven by higher mortgage banking income due to higher servicing income, reflecting a reversal of an impairment of commercial MSR in the first half of 2021, compared with the related impairment recorded in the first half of 2020, as well as higher gains on the sales of mortgage loans; and
- higher income from low income housing and equity investments.

Provision for credit losses decreased driven by an improving economic environment.

Noninterest expense decreased driven by:

- lower operating losses due to lower expense for litigation accruals and customer remediation accruals;
- lower expenses allocated from enterprise functions reflecting lower spending due to efficiency initiatives;
- lower professional and outside services expense reflecting decreased project-related expense; and
- a reduction in business travel and company events due to the impact of the COVID-19 pandemic;

partially offset by:

- higher personnel expense driven by higher incentive compensation.

Second quarter 2021 vs. second quarter 2020

Total assets (average) decreased predominantly due to a decline in loan balances driven by lower demand due to the COVID-19 pandemic and higher paydowns reflecting continued high levels of client liquidity and strength in the capital markets.

Total deposits (average) decreased reflecting continued actions to manage under the asset cap.

First half of 2021 vs. first half of 2020

Total assets (average) decreased predominantly due to a decline in trading-related assets reflecting continued actions to manage under the asset cap and a decline in loan balances driven by lower demand due to the COVID-19 pandemic and higher paydowns reflecting continued high levels of client liquidity and strength in the capital markets.

Total deposits (average and period-end) decreased reflecting continued actions to manage under the asset cap.

Wealth and Investment Management provides personalized wealth management, investment and retirement products and services to clients across U.S.-based businesses including Wells Fargo Advisors and The Private Bank. We serve clients'

brokerage needs, and deliver financial planning, private banking, credit, and fiduciary services to high-net worth and ultra-high-net worth individuals and families. Table 5g and Table 5h provide additional information for Wealth and Investment Management.

NM – Not meaningful

(1) Represents annualized segment total revenue divided by average total financial and wealth advisors for the period.

Second quarter 2021 vs. second quarter 2020

Revenue increased driven by:

- higher investment advisory and other asset-based fees due to higher market valuations on WIM advisory assets; partially offset by:
- lower deferred compensation plan investment results included in other noninterest income (largely offset by personnel expense); and
- lower net interest income reflecting the lower interest rate environment, partially offset by higher deposit balances.

Provision for credit losses decreased driven by an improving economic environment.

Noninterest expense increased due to:

- higher personnel expense driven by higher revenue-related compensation, partially offset by lower deferred compensation expense; and
- the reversal of a software licensing liability accrual in second quarter 2020.

Total deposits (average) increased primarily due to growth in customer balances in both The Private Bank and Wells Fargo Advisors.

Earnings Performance (continued)

First half of 2021 vs. first half of 2020

Revenue increased driven by:

- higher investment advisory and other asset-based fees due to higher market valuations on WIM advisory assets; and
- higher deferred compensation plan investment results included in other noninterest income (largely offset by personnel expense);

partially offset by:

- lower net interest income reflecting the lower interest rate environment, partially offset by higher deposit balances.

Provision for credit losses decreased driven by an improving economic environment.

Noninterest expense increased due to:

- higher personnel expense driven by higher revenue-related compensation and higher deferred compensation expense; and
- the reversal of a software licensing liability accrual in the first half of 2020;

partially offset by:

- lower professional and outside services expense driven by efficiency initiatives to reduce our spending on consultants and contractors.

Total deposits (average and period-end) increased primarily due to growth in customer balances in both The Private Bank and Wells Fargo Advisors.

WIM Advisory Assets In addition to transactional accounts, WIM offers advisory account relationships to brokerage customers. Fees from advisory accounts are based on a percentage of the market value of the assets as of the beginning of the quarter, which vary across the account types based on the distinct services provided, and are affected by investment performance as well as asset inflows and outflows. Advisory accounts include assets that are financial advisor-directed and separately managed by third-party managers, as well as certain client-directed brokerage assets where we earn a fee for advisory and other services, but do not have investment discretion.

WIM also manages personal trust and other assets for high net worth clients, with fee income earned based on a percentage of the market value of these assets. Table 5h presents advisory assets activity by WIM line of business for the second quarter and first half of 2021 and 2020. Management believes that advisory assets is a useful metric because it allows management, investors, and others to assess how changes in asset amounts may impact the generation of certain asset-based fees.

For second quarter 2021 and 2020, the average fee rate by account type ranged from 50 to 120 basis points.

(1) Inflows include new advisory account assets, contributions, dividends and interest.

(2) Outflows include closed advisory account assets, withdrawals and client management fees.

(3) Market impact reflects gains and losses on portfolio investments.

(4) Investment advice and other services are provided to client, but decisions are made by the client and the fees earned are based on a percentage of the advisory account assets, not the number and size of transactions executed by the client.

(5) Professionally managed portfolios with fees earned based on respective strategies and as a percentage of certain client assets.

(6) Professional advisory portfolios managed by Wells Fargo Asset Management or third-party asset managers. Fees are earned based on a percentage of certain client assets.

(7) Program with portfolios constructed of load-waived, no-load and institutional share class mutual funds. Fees are earned based on a percentage of certain client assets.

(8) Discretionary and non-discretionary portfolios held in personal trusts, investment agency, or custody accounts with fees earned based on a percentage of client assets.

Corporate includes corporate treasury and enterprise functions, net of allocations (including funds transfer pricing, capital, liquidity and certain expenses), in support of the reportable operating segments, as well as our investment portfolio and affiliated venture capital and private equity businesses. In addition, Corporate includes all restructuring charges related to our efficiency initiatives. See Note 19 (Restructuring Charges) to Financial Statements in this Report for additional information on restructuring charges. Corporate also includes certain lines of

business that management has determined are no longer consistent with the long-term strategic goals of the Company, as well as results for previously divested businesses. In March 2021, we announced an agreement to sell our Corporate Trust Services business and, in second quarter 2021, we moved the business from the Commercial Banking operating segment to Corporate. Prior period balances have been revised to conform with the current period presentation. Table 5i, Table 5j, and Table 5k provide additional information for Corporate.

Wells Fargo Asset Management assets under management (\$ in billions)	\$ 603	578	25	4	\$ 603	578	25	4

NM – Not meaningful

(1) Reflects results attributable to noncontrolling interests predominantly associated with the Company's consolidated venture capital investments.

(2) Beginning in first quarter 2021, employees who were notified of displacement remained as headcount in their respective operating segment rather than included in Corporate.

Second quarter 2021 vs. second quarter 2020

Revenue increased driven by:

- higher gains on equity securities in our affiliated venture capital and private equity businesses; and
- a gain on the sale of a portion of our student loan portfolio and a modest gain on the sale of our Canadian equipment finance business;

partially offset by:

- lower net interest income reflecting the lower interest rate environment and lower loan balances;
- lower gains on debt securities due to fewer sales; and
- lower gains on deferred compensation plan investments (largely offset by personnel expense).

Provision for credit losses decreased driven by an improving economic environment and lower provision associated with the sale of a portion of our student loan portfolio.

Noninterest expense decreased due to:

- lower operating losses due to lower expense for litigation accruals and customer remediation accruals; and
- lower deferred compensation plan expense;

partially offset by:

- a write-down of goodwill in second quarter 2021 related to the sale of a portion of our student loan portfolio.

First half of 2021 vs. first half of 2020

Revenue increased driven by:

- higher gains on equity securities in our affiliated venture capital and private equity businesses, as well as impairments on equity securities in first quarter 2020 due to the market impact of the COVID-19 pandemic;
- higher gains on deferred compensation plan investments (largely offset by personnel expense); and
- a gain on the sale of substantially all of our student loan portfolio;

partially offset by:

- lower net interest income reflecting the lower interest rate environment, unfavorable hedge ineffectiveness accounting results, and lower loan balances; and
- lower gains on debt securities due to fewer sales.

Provision for credit losses decreased driven by an improving economic environment and lower provision associated with the sale of substantially all of our student loan portfolio.

Noninterest expense increased due to:

- higher incentive compensation expense, including the impact of higher market valuations on stock-based compensation;
- higher deferred compensation expense; and
- a write-down of goodwill in 2021 related to the sale of substantially all of our student loan portfolio.

Earnings Performance (continued)

Corporate includes our rail car leasing business, which had long-lived operating lease assets (as a lessor) of \$5.6 billion, which was net of \$1.9 billion of accumulated depreciation, as of June 30, 2021. The average age of our rail cars is 21 years and the rail cars are typically leased under short-term leases of 3 to 5 years. Our three largest concentrations, which represented 55% of our rail car fleet as of June 30, 2021, were rail cars used for the transportation of agricultural grain, coal, and cement/sand products. Impairments may result in the future based on changing economic and market conditions affecting the long-term demand and utility of specific types of rail cars. Our assumptions for impairment are sensitive to estimated

utilization and rental rates, as well as the estimated economic life of the leased asset. For additional information on the accounting for impairment of operating lease assets, see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

In addition, Corporate includes assets under management (AUM) and assets under administration (AUA) for Institutional Retirement and Trust (IRT) client assets of \$20 billion and \$580 billion, respectively, at June 30, 2021, which we continue to administer at the direction of the buyer pursuant to a transition services agreement. The transition services agreement terminates in December 2021, with available options to extend.

Table 5j: Corporate – Balance Sheet

Second quarter 2021 vs. second quarter 2020

Total assets (average) increased due to:

- an increase in cash, cash equivalents, and restricted cash managed by corporate treasury as a result of an increase in deposits from the reportable operating segments; and
- an increase in held-to-maturity debt securities related to portfolio rebalancing to manage liquidity and interest rate risk;

partially offset by:

- a decline in available-for-sale debt securities related to portfolio rebalancing to manage liquidity and interest rate risk;
- a decline in average equity securities due to the transition from equity securities to derivative instruments for economic hedges of the deferred compensation plan liabilities in second quarter 2020 and a reduction in Federal Home Loan Bank stock, partially offset by higher balances in our venture capital business; and
- a decline in loans due to the sale of a portion of our student loan portfolio.

Total deposits (average) decreased reflecting actions taken to manage under the asset cap.

First half of 2021 vs. first half of 2020

Total assets (average and period-end) increased due to:

- an increase in cash, cash equivalents, and restricted cash managed by corporate treasury as a result of an increase in deposits from the reportable operating segments; and
- an increase in held-to-maturity debt securities related to portfolio rebalancing to manage liquidity and interest rate risk;

partially offset by:

- a decline in available-for-sale debt securities related to portfolio rebalancing to manage liquidity and interest rate risk;
- a decline in average equity securities due to the transition from equity securities to derivative instruments for economic hedges of the deferred compensation plan liabilities in second quarter 2020 and a reduction in Federal Home Loan Bank stock, partially offset by higher balances in our venture capital business; and
- a decline in loans due to the sale of substantially all of our student loan portfolio in the first half of 2021.

Total deposits (average and period-end) decreased reflecting actions taken to manage under the asset cap.

Wells Fargo Asset Management (WFAM) Assets Under Management We earn investment advisory and other asset-based fees from managing and administering assets through WFAM, which offers Wells Fargo proprietary mutual funds and manages institutional separate accounts. Generally, we earn fees from AUM where we have discretionary management authority over the investments and generate fees as a percentage of the market value of the AUM. WFAM assets under management

consist of equity, alternative, balanced, fixed income, money market, and stable value, and include client assets that are managed or sub-advised on behalf of other Wells Fargo lines of business. Table 5k presents WFAM AUM activity for the second quarter and first half of 2021 and 2020. Management believes that AUM is a useful metric because it allows management, investors, and others to assess how changes in asset amounts may impact the generation of certain asset-based fees.

Table 5k: WFAM Assets Under Management

(in billions)	Quarter ended					Six months ended				
	Balance, beginning of period	Inflows (1)	Outflows (2)	Market impact (3)	Balance, end of period	Balance, beginning of period	Inflows (1)	Outflows (2)	Market impact (3)	Balance, end of period
June 30, 2021										
Money market funds (4)	\$ 191.2	8.5	—	—	199.7	\$ 197.4	2.3	—	—	199.7
Other assets managed	399.2	22.1	(28.5)	11.0	403.8	405.6	45.9	(58.8)	11.1	403.8
Total WFAM assets under management	\$ 590.4	30.6	(28.5)	11.0	603.5	\$ 603.0	48.2	(58.8)	11.1	603.5
June 30, 2020										
Money market funds (4)	\$ 166.2	35.7	—	—	201.9	\$ 130.6	71.3	—	—	201.9
Other assets managed	351.6	26.9	(26.5)	24.4	376.4	378.2	53.1	(55.1)	0.2	376.4
Total WFAM assets under management	\$ 517.8	62.6	(26.5)	24.4	578.3	\$ 508.8	124.4	(55.1)	0.2	578.3

(1) Inflows include new managed account assets, contributions, dividends and interest.

(2) Outflows include closed managed account assets, withdrawals and client management fees.

(3) Market impact reflects gains and losses on portfolio investments.

(4) Money Market funds activity is presented on a net inflow or net outflow basis, because the gross flows are not meaningful nor used by management as an indicator of performance.

Balance Sheet Analysis

At June 30, 2021, our assets totaled \$1.95 trillion, down \$6.9 billion from December 31, 2020.

The following discussion provides additional information about the major components of our consolidated balance sheet.

See the “Capital Management” section in this Report for information on changes in our equity.

Available-for-Sale and Held-to-Maturity Debt Securities

Table 6: Available-for-Sale and Held-to-Maturity Debt Securities

(\$ in millions)	June 30, 2021				December 31, 2020			
	Amortized cost, net (1)	Net unrealized gains	Fair value	Weighted average expected maturity (yrs)	Amortized cost, net (1)	Net unrealized gains	Fair value	Weighted average expected maturity (yrs)
Available-for-sale (2)	186,309	3,588	189,897	4.9	215,533	4,859	220,392	4.5
Held-to-maturity (3)	260,941	3,146	264,087	6.1	205,720	6,587	212,307	4.5
Total	\$ 447,250	6,734	453,984	n/a	421,253	11,446	432,699	n/a

(1) Represents amortized cost of the securities, net of the allowance for credit losses of \$33 million and \$28 million related to available-for-sale debt securities and \$77 million and \$41 million related to held-to-maturity debt securities at June 30, 2021, and December 31, 2020.

(2) Available-for-sale debt securities are carried on the consolidated balance sheet at fair value.

(3) Held-to-maturity debt securities are carried on the consolidated balance sheet at amortized cost, net of the allowance for credit losses.

Table 6 presents a summary of our portfolio of investments in available-for-sale (AFS) and held-to-maturity (HTM) debt securities. See the “Balance Sheet Analysis – Available-for-Sale and Held-to-Maturity Debt Securities” section in our 2020 Form 10-K for information on our investment management objectives and practices and the “Risk Management – Asset/Liability Management” section in this Report for information on liquidity and interest rate risk.

The fair value of AFS debt securities decreased from December 31, 2020, as purchases were more than offset by runoff, sales and transfers to HTM debt securities due to actions taken to reposition the overall portfolio for capital management purposes.

The net amortized cost of HTM debt securities increased from December 31, 2020, as purchases and transfers from AFS debt securities were partially offset by runoff.

At June 30, 2021, 94% of the combined AFS and HTM debt securities portfolio was rated AA- or above. Ratings are based on external ratings where available and, where not available, based on internal credit grades.

The total net unrealized gains on AFS and HTM debt securities decreased from December 31, 2020, driven by higher interest rates, partially offset by tighter credit spreads. See Note 3 (Available-for-Sale and Held-to-Maturity Debt Securities) to Financial Statements in this Report for additional information on AFS and HTM debt securities, including a summary of debt securities by security type.

Loan Portfolios

Table 7 provides a summary of total outstanding loans by portfolio segment. Commercial loans were relatively flat compared with December 31, 2020. Consumer loans decreased from December 31, 2020, driven by a decrease in the residential mortgage – first lien portfolio due to paydowns and the transfer of \$10.8 billion of first lien mortgage loans to loans held for sale (LHFS), substantially all of which related to the sales of loans purchased from GNMA loan securitization pools in prior periods, partially offset by originations of \$30.8 billion.

Table 7: Loan Portfolios

(in millions)	June 30, 2021	December 31, 2020
Commercial	\$ 476,422	478,417
Consumer	375,878	409,220
Total loans	\$ 852,300	887,637
Change from prior year-end	\$ (35,337)	(74,628)

Average loan balances and a comparative detail of average loan balances is included in Table 1 under “Earnings Performance – Net Interest Income” earlier in this Report. Additional information on total loans outstanding by portfolio segment and class of financing receivable is included in the “Risk Management – Credit Risk Management” section in this Report. Period-end balances and other loan related information are in Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report.

See the “Balance Sheet Analysis – Loan Portfolios” section in our 2020 Form 10-K for additional information regarding contractual loan maturities and the distribution of loans to changes in interest rates.

Deposits

Deposits increased from December 31, 2020, reflecting:

- higher levels of liquidity and savings for consumer customers reflecting government stimulus programs and payment deferral programs, as well as continued economic uncertainty associated with the COVID-19 pandemic; partially offset by:
- actions taken to manage under the asset cap resulting in declines in time deposits, such as brokered certificates of

deposit (CDs), and interest-bearing deposits in non-U.S. offices.

Table 8 provides additional information regarding deposits. Information regarding the impact of deposits on net interest income and a comparison of average deposit balances is provided in the “Earnings Performance – Net Interest Income” section and Table 1 earlier in this Report.

Table 8: Deposits

(\$ in millions)	Jun 30, 2021	% of total deposits	Dec 31, 2020	% of total deposits	% Change
Noninterest-bearing demand deposits	\$ 504,108	35 %	\$ 467,068	33 %	8
Interest-bearing demand deposits	453,277	32	447,446	32	1
Savings deposits	419,812	29	404,935	29	4
Time deposits	35,269	2	49,775	4	(29)
Interest-bearing deposits in non-U.S. offices	28,006	2	35,157	2	(20)
Total deposits	\$ 1,440,472	100 %	\$ 1,404,381	100 %	3

Off-Balance Sheet Arrangements

In the ordinary course of business, we engage in financial transactions that are not recorded on the consolidated balance sheet, or may be recorded on the consolidated balance sheet in amounts that are different from the full contract or notional amount of the transaction. Our off-balance sheet arrangements include commitments to lend and purchase debt and equity securities, transactions with unconsolidated entities, guarantees, derivatives, and other commitments. These transactions are designed to (1) meet the financial needs of customers, (2) manage our credit, market or liquidity risks, and/or (3) diversify our funding sources.

Commitments to Lend

We enter into commitments to lend to customers, which are usually at a stated interest rate, if funded, and for specific purposes and time periods. When we enter into commitments, we are exposed to credit risk. The maximum credit risk for these commitments will generally be lower than the contractual amount because a significant portion of these commitments are not funded. For additional information, see Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report.

Transactions with Unconsolidated Entities

In the normal course of business, we enter into various types of on- and off-balance sheet transactions with special purpose entities (SPEs), which are corporations, trusts, limited liability companies or partnerships that are established for a limited purpose. Generally, SPEs are formed in connection with securitization transactions and are considered variable interest entities (VIEs). For additional information, see Note 8 (Securitizations and Variable Interest Entities) to Financial Statements in this Report.

Guarantees and Other Arrangements

Guarantees are contracts that contingently require us to make payments to a guaranteed party based on an event or a change in an underlying asset, liability, rate or index. Guarantees are generally in the form of standby and direct pay letters of credit, written options, recourse obligations, exchange and clearing house guarantees, indemnifications, and other types of similar arrangements. For additional information, see Note 11 (Guarantees and Other Commitments) to Financial Statements in this Report.

Commitments to Purchase Debt and Equity Securities

We enter into commitments to purchase securities under resale agreements. We also may enter into commitments to purchase debt and equity securities to provide capital for customers' funding, liquidity or other future needs. For additional information, see Note 11 (Guarantees and Other Commitments) to Financial Statements in this Report.

Derivatives

We use derivatives to manage exposure to market risk, including interest rate risk, credit risk and foreign currency risk, and to assist customers with their risk management objectives. Derivatives are recorded on the consolidated balance sheet at fair value, and volume can be measured in terms of the notional amount, which is generally not exchanged, but is used only as the basis on which interest and other payments are determined. The notional amount is not recorded on the consolidated balance sheet and is not, when viewed in isolation, a meaningful measure of the risk profile of the instruments. For additional information, see Note 14 (Derivatives) to Financial Statements in this Report.

Risk Management

Wells Fargo manages a variety of risks that can significantly affect our financial performance and our ability to meet the expectations of our customers, shareholders, regulators and other stakeholders. For additional information about how we manage risk, see the “Risk Management” section in our 2020 Form 10-K. The discussion that follows supplements our discussion of the management of certain risks contained in the “Risk Management” section in our 2020 Form 10-K.

Credit Risk Management

We define credit risk as the risk of loss associated with a borrower or counterparty default (failure to meet obligations in accordance with agreed upon terms). Credit risk exists with many of our assets and exposures such as debt security holdings, certain derivatives, and loans.

The Board’s Risk Committee has primary oversight responsibility for credit risk. A Credit Subcommittee of the Risk Committee assists the Risk Committee in providing oversight of credit risk. At the management level, Credit Risk, which is part of IRM, has oversight responsibility for credit risk. Credit Risk reports to the CRO and supports periodic reports related to credit risk provided to the Board’s Risk Committee or its Credit Subcommittee.

Loan Portfolio

Our loan portfolios represent the largest component of assets on our consolidated balance sheet for which we have credit risk. Table 9 presents our total loans outstanding by portfolio segment and class of financing receivable.

Table 9: Total Loans Outstanding by Portfolio Segment and Class of Financing Receivable

(in millions)	Jun 30, 2021	Dec 31, 2020
Commercial:		
Commercial and industrial	\$ 317,618	318,805
Real estate mortgage	120,678	121,720
Real estate construction	22,406	21,805
Lease financing	15,720	16,087
Total commercial	476,422	478,417
Consumer:		
Residential mortgage – first lien	244,371	276,674
Residential mortgage – junior lien	19,637	23,286
Credit card	34,936	36,664
Auto	51,073	48,187
Other consumer	25,861	24,409
Total consumer	375,878	409,220
Total loans	\$ 852,300	887,637

We manage our credit risk by establishing what we believe are sound credit policies for underwriting new business, while monitoring and reviewing the performance of our existing loan portfolios. We employ various credit risk management and monitoring activities to mitigate risks associated with multiple risk factors affecting loans we hold including:

- Loan concentrations and related credit quality;
- Counterparty credit risk;
- Economic and market conditions;
- Legislative or regulatory mandates;
- Changes in interest rates;
- Merger and acquisition activities; and
- Reputation risk.

Our credit risk management oversight process is governed centrally, but provides for direct management and accountability by our lines of business. Our overall credit process includes comprehensive credit policies, disciplined credit underwriting, frequent and detailed risk measurement and modeling, extensive credit training programs, and a continual loan review and audit process.

A key to our credit risk management is adherence to a well-controlled underwriting process, which we believe is appropriate for the needs of our customers as well as investors who purchase the loans or securities collateralized by the loans.

Credit Quality Overview Credit quality in second quarter 2021 reflected continued improvement in the economic environment. In particular:

- Nonaccrual loans were \$7.4 billion at June 30, 2021, down from \$8.7 billion at December 31, 2020. Commercial nonaccrual loans decreased to \$3.5 billion at June 30, 2021, compared with \$4.8 billion at December 31, 2020, and consumer nonaccrual loans declined to \$3.8 billion at June 30, 2021, compared with \$3.9 billion at December 31, 2020. Nonaccrual loans represented 0.86% of total loans at June 30, 2021, compared with 0.98% at December 31, 2020.
- Net loan charge-offs as a percentage of our average commercial and consumer loan portfolios were 0.07% and 0.32% in the second quarter and 0.10% and 0.35% in the first half of 2021, respectively, compared with 0.44% and 0.48% in the second quarter and 0.35% and 0.51% in the first half of 2020.
- Loans that are not government insured/guaranteed and 90 days or more past due and still accruing were \$277 million and \$460 million in our commercial and consumer portfolios, respectively, at June 30, 2021, compared with \$78 million and \$612 million at December 31, 2020.
- Our provision for credit losses for loans was \$(1.2) billion and \$(2.4) billion in the second quarter and first half of 2021, respectively, compared with \$9.6 billion and \$13.4 billion for the same periods a year ago.
- The ACL for loans decreased to \$16.4 billion, or 1.92% of total loans, at June 30, 2021, compared with \$19.7 billion, or 2.22%, at December 31, 2020.

Additional information on our loan portfolios and our credit quality trends follows.

COVID-Related Lending Accommodations During 2020, we provided accommodations to customers in response to the COVID-19 pandemic, including payment deferrals, and other expanded assistance for mortgage, credit card, auto, small business, personal and commercial lending customers. With the exception of residential mortgage-related accommodation programs, the COVID-related lending accommodations instituted during 2020 were no longer offered as of December 31, 2020. Residential mortgage accommodation programs, which continued during the first half of 2021, offered payment deferrals for up to a total of 18 months. Table 10 summarizes the unpaid principal balance (UPB) of consumer loans that received accommodations under loan modification programs established to assist customers with the economic impact of the COVID-19 pandemic (COVID-related modifications) and that remained in a deferral period as of June 30, 2021.

Based on guidance in the CARES Act and the *Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus (Revised)* issued by federal banking regulators in April 2020 (the Interagency Statement), both of which we elected to apply, loan modifications related to COVID-19 and that meet certain other criteria are exempt from troubled debt restructuring (TDR) classification. Additionally, our election to apply the TDR relief provided by the CARES Act and the Interagency Statement impacts our regulatory capital ratios as these loan modifications

related to COVID-19 are not adjusted to a higher risk-weighting normally required with TDR classification. At June 30, 2021, substantially all residential mortgage loans that were in a deferral period, excluding those that were government insured/guaranteed, met the criteria for TDR relief and were therefore not classified as TDRs. For additional information regarding the TDR relief provided by the CARES Act and the clarifying TDR accounting guidance from the Interagency Statement, see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

Customer payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of net charge-offs, delinquencies, and nonaccrual status for those customers who would have otherwise moved into past due or nonaccrual status. Customer loans that are not further modified upon exit from the deferral period may be placed on nonaccrual status or charged-off in accordance with our policies if customers are unable to resume making payments in accordance with the contractual terms of their agreement. As of June 30, 2021, substantially all of our consumer loans were current after exiting the deferral period. For additional information about our COVID-related modifications, see the “Risk Management – Credit Risk Management – COVID-Related Lending Accommodations” section and Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

Table 10: Consumer Loan Modifications Related to COVID-19

(\$ in millions)	Unpaid principal balance of modified loans still in deferral period at Jun 30, 2021	% of loan class (1)	% current at Jun 30, 2021 after exit from deferral period (2)
Consumer:			
Residential mortgage – first lien (3)	\$ 6,810	3 %	96
Residential mortgage – junior lien (3)	997	5	90
All other consumer (4)	29	*	92
Subtotal	7,836	2	
Residential mortgage – first lien (government insured/guaranteed) (5)	11,400	5	
Total consumer	\$ 19,236		

* Less than 1%.

(1) Based on total loans outstanding at June 30, 2021.

(2) Represents the UPB of loans that exited the deferral period and had a balance that was less than 30 days past due as of June 30, 2021.

(3) For residential mortgage loans still in active COVID-related accommodation programs as of June 30, 2021, 96% of first lien and 86% of junior lien mortgage loans had a loan-to-value ratio that was 80% or lower.

(4) Includes credit card, auto, and other consumer loans (including personal lines/loans).

(5) Represents residential mortgage – first lien loans insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA) that were primarily repurchased from GNMA loan securitization pools. For additional information on GNMA loan securitization pools, see the “Risk Management – Credit Risk Management – Risks Relating to Servicing Activities” section in this Report. FHA/VA loans are entitled to payment deferrals of scheduled principal and interest up to a total of 18 months.

Significant Loan Portfolio Reviews Measuring and monitoring our credit risk is an ongoing process that tracks delinquencies, collateral values, Fair Isaac Corporation (FICO) scores, economic trends by geographic areas, loan-level risk grading for certain portfolios (typically commercial) and other indications of credit risk. Our credit risk monitoring process is designed to enable early identification of developing risk and to support our determination of an appropriate allowance for credit losses. The following discussion provides additional characteristics and analysis of our significant portfolios. See Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report for more analysis and credit metric information for each of the following portfolios.

COMMERCIAL AND INDUSTRIAL LOANS AND LEASE FINANCING For purposes of portfolio risk management, we aggregate commercial and industrial loans and lease financing according to market segmentation and standard industry codes. We

generally subject commercial and industrial loans and lease financing to individual risk assessment using our internal borrower and collateral quality ratings. Our ratings are aligned to regulatory definitions of pass and criticized categories with criticized segmented among special mention, substandard, doubtful and loss categories.

We had \$15.6 billion of the commercial and industrial loan and lease financing portfolio internally classified as criticized in accordance with regulatory guidance at June 30, 2021, compared with \$19.3 billion at December 31, 2020. The change was driven by decreases in the oil, gas and pipelines, retail, materials and commodities, entertainment and recreation, and technology, telecom and media industries reflecting improvement in the economic environment.

The majority of our commercial and industrial loans and lease financing portfolio is secured by short-term assets, such as accounts receivable, inventory and debt securities, as well as long-lived assets, such as equipment and other business assets.

Risk Management – Credit Risk Management (continued)

Generally, the primary source of repayment for this portfolio is the operating cash flows of customers, with the collateral securing this portfolio representing a secondary source of repayment.

The portfolio decreased slightly at June 30, 2021, compared with December 31, 2020, as a result of paydowns, partially offset

by limited loan draws. Table 11 provides our commercial and industrial loans and lease financing by industry. The industry categories are based on the North American Industry Classification System.

Table 11: Commercial and Industrial Loans and Lease Financing by Industry

(\$ in millions)	June 30, 2021				December 31, 2020

* Less than 1%.

(1) Total commitments consist of loans outstanding plus unfunded credit commitments, excluding issued letters of credit.

(2) No other single industry had total loans in excess of \$3.4 billion and \$3.8 billion at June 30, 2021, and December 31, 2020, respectively.

Loans to financials except banks, our largest industry concentration, is predominantly comprised of loans to investment firms, financial vehicles, and nonbank creditors. We had \$88.1 billion and \$80.0 billion of loans originated by our Asset Backed Finance (ABF) and Financial Institution Group (FIG) lines of business at June 30, 2021, and December 31, 2020, respectively. These loans include: (i) loans to customers related to their subscription or capital calls, (ii) loans to nonbank lenders collateralized by commercial loans, and (iii) loans to originators or servicers of financial assets collateralized by residential real estate or other consumer loans such as credit cards, auto loans and leases, student loans and other financial assets eligible for the securitization market. These ABF and FIG loans are limited to a percentage of the value of the underlying financial assets considering underlying credit risk, asset duration, and ongoing performance. These ABF and FIG loans may also have other features to manage credit risk such as cross-collateralization, credit enhancements, and contractual re-margining of collateral supporting the loans. In addition, loans to financials except banks included collateralized loan obligations (CLOs) in loan form, all of which were rated AA or above, of \$8.1 billion and \$7.9 billion at June 30, 2021, and December 31, 2020, respectively.

Oil, gas and pipelines loans included \$6.6 billion and \$7.5 billion of senior secured loans outstanding at June 30, 2021, and December 31, 2020, respectively. Oil, gas and pipelines

nonaccrual loans decreased at June 30, 2021, compared with December 31, 2020, driven by loan payoffs.

We continue to perform escalated credit monitoring for certain industries that we consider to be directly and most adversely affected by the COVID-19 pandemic.

Our commercial and industrial loans and lease financing portfolio also includes non-U.S. loans of \$72.1 billion and \$63.8 billion at June 30, 2021, and December 31, 2020, respectively. Significant industry concentrations of non-U.S. loans at June 30, 2021, and December 31, 2020, respectively, included:

- \$43.5 billion and \$36.2 billion in the financials except banks category;
- \$14.7 billion and \$12.8 billion in the banks category; and
- \$1.4 billion and \$1.6 billion in the oil, gas and pipelines category.

COMMERCIAL REAL ESTATE (CRE) We generally subject CRE loans to individual risk assessment using our internal borrower and collateral quality ratings. Our ratings are aligned to regulatory definitions of pass and criticized categories with criticized segmented among special mention, substandard, doubtful and loss categories. We had \$15.6 billion of CRE mortgage loans classified as criticized at June 30, 2021, compared with \$12.0 billion at December 31, 2020, and \$2.6 billion of CRE construction loans classified as criticized at June 30, 2021,

compared with \$1.6 billion at December 31, 2020. The increase in criticized CRE mortgage and construction loans was driven by the hotel/motel, apartment, institutional, and office property types and reflected the economic impact of the COVID-19 pandemic. Due to uncertainty in the recovery from the economic impacts of the COVID-19 pandemic, the credit quality of certain property types within our CRE loan portfolio, such as retail, hotel/motel, office buildings, and shopping centers, could continue to be adversely affected.

The total CRE loan portfolio decreased \$441 million from December 31, 2020, driven by a decrease in CRE mortgage loans predominantly related to the office, retail (excluding shopping

center), and shopping center property types, partially offset by an increase in loans related to apartments. The CRE loan portfolio included \$8.4 billion of non-U.S. CRE loans at June 30, 2021. The portfolio is diversified both geographically and by property type. The largest geographic concentrations of CRE loans are in California, New York, Florida and Texas, which combined represented 48% of the total CRE portfolio. The largest property type concentrations are office buildings at 25% and apartments at 20% of the portfolio.

Table 12 summarizes CRE loans by state and property type with the related nonaccrual totals at June 30, 2021.

Table 12: CRE Loans by State and Property Type

(1) Includes 40 states; no state in Other had loans in excess of \$3.6 billion.

Risk Management – Credit Risk Management (continued)

NON-U.S. LOANS Our classification of non-U.S. loans is based on whether the borrower’s primary address is outside of the United States. At June 30, 2021, non-U.S. loans totaled \$80.8 billion, representing approximately 9% of our total consolidated loans outstanding, compared with \$72.9 billion, or approximately 8% of our total consolidated loans outstanding, at December 31, 2020. Non-U.S. loans were approximately 4% of our total consolidated assets at both June 30, 2021, and December 31, 2020.

COUNTRY RISK EXPOSURE Our country risk monitoring process incorporates centralized monitoring of economic, political, social, legal, and transfer risks in countries where we do or plan to do business, along with frequent dialogue with our customers, counterparties and regulatory agencies. We establish exposure limits for each country through a centralized oversight process based on customer needs, and through consideration of the relevant and distinct risk of each country. We monitor exposures closely and adjust our country limits in response to changing conditions. We evaluate our individual country risk exposure based on our assessment of the borrower’s ability to repay, which gives consideration for allowable transfers of risk, such as guarantees and collateral, and may be different from the reporting based on the borrower’s primary address.

Our largest single country exposure outside the U.S. at June 30, 2021, was the United Kingdom, which totaled \$34.4 billion, or approximately 2% of our total assets, and included \$7.7 billion of sovereign claims. Our United Kingdom sovereign claims arise predominantly from deposits we have placed with the Bank of England pursuant to regulatory requirements in support of our London branch.

Table 13 provides information regarding our top 20 exposures by country (excluding the U.S.), based on our assessment of risk, which gives consideration to the country of any guarantors and/or underlying collateral. With respect to Table 13:

- Lending and deposits exposure includes outstanding loans, unfunded credit commitments, and deposits with non-U.S. banks. These balances are presented prior to the deduction of allowance for credit losses or collateral received under the terms of the credit agreements, if any.
- Securities exposure represents debt and equity securities of non-U.S. issuers. Long and short positions are netted, and net short positions are reflected as negative exposure.
- Derivatives and other exposure represents foreign exchange contracts, derivative contracts, securities resale agreements, and securities lending agreements.

(1) Total non-sovereign exposure comprised \$47.6 billion exposure to financial institutions and \$43.8 billion to non-financial corporations at June 30, 2021.

RESIDENTIAL MORTGAGE LOANS Our residential mortgage loan portfolio is comprised of 1-4 family first and junior lien mortgage loans. Residential mortgage – first lien loans comprised 93% of the total residential mortgage loan portfolio at both June 30, 2021, and December 31, 2020.

The residential mortgage loan portfolio includes some loans with adjustable-rate features and some with an interest-only feature as part of the loan terms. Interest-only loans were approximately 3% of total loans at both June 30, 2021, and December 31, 2020. We believe our origination process appropriately addresses our adjustable-rate mortgage (ARM) reset risk across our residential mortgage loan portfolios and our ACL for loans considers this risk. We do not offer option ARM products, nor do we offer variable-rate mortgage products with

fixed payment amounts, commonly referred to within the financial services industry as negative amortizing mortgage loans.

We continue to modify residential mortgage loans to assist homeowners and other borrowers experiencing financial difficulties. For additional information on our modification programs, see the “Risk Management – Credit Risk Management – Residential Mortgage Loans” section in our 2020 Form 10-K. For additional information on customer accommodations, including loan modifications, in response to the COVID-19 pandemic, see the “Risk Management – Credit Risk Management – COVID-Related Lending Accommodations” section in this Report.

We monitor changes in real estate values and underlying economic or market conditions for all geographic areas of our residential mortgage portfolios as part of our credit risk management process. Our underwriting and periodic review of loans and lines secured by residential real estate collateral includes original appraisals adjusted for the change in Home Price Index (HPI) or estimates from automated valuation models (AVMs) to support property values. Additional information about appraisals, AVMs, and our policy for their use can be found in Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report and the “Risk Management – Credit Risk Management – Residential Mortgage Loans” section in our 2020 Form 10-K.

Part of our credit monitoring includes tracking delinquency, current FICO scores and loan/combined loan to collateral values (LTV/CLTV) on the entire residential mortgage loan portfolio. Excluding government insured/guaranteed loans, these credit risk indicators on the residential mortgage portfolio were:

- Loans 30 days or more delinquent at June 30, 2021, totaled \$3.7 billion, or 1% of total mortgages, compared with \$4.7 billion, or 2%, at December 31, 2020. Customer payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies;
- Loans with FICO scores lower than 640 totaled \$4.3 billion, or 2% of total mortgages at June 30, 2021, compared with \$5.6 billion, or 2%, at December 31, 2020; and
- Mortgages with a LTV/CLTV greater than 100% totaled \$912 million at June 30, 2021, or less than 1% of total mortgages, compared with \$1.6 billion, or 1%, at December 31, 2020.

Information regarding credit quality indicators can be found in Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report. Residential mortgage loans by state are presented in Table 14.

Table 14: Residential Mortgage Loans by State

(\$ in millions)	June 30, 2021			
	Residential mortgage – first lien	Residential mortgage – junior lien	Total residential mortgage	% of total loans
Residential mortgage loans:				
California (1)	\$ 96,679	5,155	101,834	12 %

Total	\$ 244,371	19,637	264,008	31 %

(1) Our residential mortgage loans to borrowers in California are located predominantly within the larger metropolitan areas, with no single California metropolitan area consisting of more than 4% of total loans.

(2) Consists of 41 states; no state in Other had loans in excess of \$5.1 billion.

(3) Represents loans whose repayments are predominantly insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA).

Risk Management – Credit Risk Management (continued)

Residential Mortgage – First Lien Portfolio Our total residential mortgage – first lien portfolio decreased \$32.3 billion from December 31, 2020, driven by loan paydowns as a result of the low interest rate environment and the transfer of \$10.8 billion of first lien mortgage loans to loans held for sale (LHFS) substantially all of which related to the sales of loans purchased

from GNMA loan securitization pools in prior periods, partially offset by originations of \$30.8 billion.

Table 15 shows certain delinquency and loss information for the residential mortgage – first lien portfolio and lists the top five states by outstanding balance.

Table 15: Residential Mortgage – First Lien Portfolio Performance

Government insured/guaranteed loans	20,231	30,240							
Total first lien mortgage portfolio	\$ 244,371	276,674							

Residential Mortgage – Junior Lien Portfolio The residential mortgage – junior lien portfolio consists of residential mortgage lines and loans that are subordinate in rights to an existing lien on the same property. It is not unusual for these lines and loans to have draw periods, interest-only payments, balloon payments, adjustable rates and similar features. Junior lien loan products are primarily amortizing payment loans with fixed interest rates and repayment periods between five to 30 years. We continuously monitor the credit performance of our residential mortgage –

junior lien portfolio for trends and factors that influence the frequency and severity of losses, such as residential mortgage – junior lien performance when the residential mortgage – first lien loan is delinquent.

The decrease in the residential mortgage – junior lien portfolio at June 30, 2021, compared with December 31, 2020, reflected loan paydowns. Table 16 shows certain delinquency and loss information for the residential mortgage – junior lien portfolio and lists the top five states by outstanding balance.

Table 16: Residential Mortgage – Junior Lien Portfolio Performance

Other	8,346	9,940	2.37	2.31	(0.64)	(0.36)	(0.43)	(0.17)	(0.21)
Total junior lien mortgage portfolio	\$ 19,637	23,286	2.47 %	2.41	(0.60)	(0.35)	(0.39)	(0.22)	(0.17)

As of June 30, 2021, with respect to loans in the residential mortgage – junior lien portfolio that had a CLTV ratio in excess of 100%:

- such loans totaled 2% of the outstanding balance of the residential mortgage – junior lien portfolio;
- 3% were 30 days or more past due. Customer payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies; and
- the unsecured portion (the outstanding amount that was in excess of the most recent property collateral value) of the outstanding balances of these loans totaled 1% of the residential mortgage – junior lien portfolio.

CLTV represents the ratio of the total loan balance of first and junior lien mortgages (including unused line amounts for credit line products) to property collateral value. For additional information on consumer loans by LTV/CLTV, see Table 4.11 in Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report.

Residential Mortgage – Junior Lien Line and Loan and

Residential Mortgage – First Lien Line Our junior lien, as well as first lien, lines of credit portfolios generally have draw periods of 10, 15 or 20 years with variable interest rate and payment options available during the draw period of (1) interest-only or (2) 1.5% of outstanding principal balance plus accrued interest. As of June 30, 2021, lines of credit in a draw period primarily used the interest-only option.

During the draw period, the borrower has the option of converting all or a portion of the line from a variable interest rate to a fixed rate with terms including interest-only payments for a fixed period between three to seven years or a fully amortizing payment with a fixed period between five to 30 years. At the end of the draw period, a line of credit generally converts to an amortizing payment schedule with repayment terms of up to 30 years based on the balance at time of conversion. Certain lines and loans have been structured with a balloon payment, which requires full repayment of the outstanding balance at the end of the term period. The conversion of lines or loans to fully amortizing or balloon payoff may result in a significant payment

increase, which can affect some borrowers' ability to repay the outstanding balance.

The lines that enter their amortization period may experience higher delinquencies and higher loss rates than the ones in their draw or term period. We have considered this increased risk in our ACL for loans estimate.

In anticipation of our borrowers reaching the end of their contractual commitment, we have created a program to inform, educate and help these borrowers transition from interest-only to fully-amortizing payments or full repayment. We monitor the performance of the borrowers moving through the program in an effort to refine our ongoing program strategy.

Table 17 reflects the outstanding balance of our portfolio of residential mortgage – junior liens, including lines and loans, and residential mortgage – first lien lines segregated into scheduled end of draw or end-of-term periods and products that are currently amortizing, or in balloon repayment status. The unfunded credit commitments for residential mortgage – junior and first lien lines totaled \$49.8 billion at June 30, 2021.

Table 17: Residential Mortgage – Junior Lien Line and Loan and Residential Mortgage – First Lien Line Portfolios Payment Schedule

(\$ in millions)	Outstanding balance June 30, 2021	Scheduled end of draw/term						
		Remainder of 2021	2022	2023	2024	2025	2026 and thereafter (1)	Amortizing (2)
Residential mortgage – junior lien lines and loans	\$ 19,637	384	2,271	1,563	1,239	2,059	6,050	6,071
Residential mortgage – first lien lines	7,957	212	1,212	929	721	1,006	2,495	1,382
Total	\$ 27,594	596	3,483	2,492	1,960	3,065	8,545	7,453
% of portfolios	100 %	2	13	9	7	11	31	27

(1) Substantially all lines and loans are scheduled to convert to amortizing loans by the end of 2030, with annual scheduled amounts through 2030 ranging from \$914 million to \$3.3 billion and averaging \$1.7 billion per year.

(2) Includes \$69 million of end-of-term balloon payments which were past due.

At June 30, 2021, \$339 million, or 2%, of lines in their draw period were 30 days or more past due, compared with \$347 million, or 5%, of amortizing lines of credit. Customer payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies. On a monthly basis, we monitor the payment characteristics of borrowers in our residential mortgage – first and junior lien lines of credit portfolios. In June 2021, excluding borrowers with COVID-related loan modification payment deferrals:

- Approximately 43% of these borrowers paid only the minimum amount due and approximately 52% paid more than the minimum amount due. The rest were either delinquent or paid less than the minimum amount due.
- For the borrowers with an interest-only payment feature, approximately 28% paid only the minimum amount due and approximately 67% paid more than the minimum amount due.

CREDIT CARD Our credit card portfolio totaled \$34.9 billion at June 30, 2021, compared with \$36.7 billion at December 31, 2020. The decrease in the outstanding balance at June 30, 2021, compared with December 31, 2020, was due to seasonal paydowns.

AUTO Our auto portfolio totaled \$51.1 billion at June 30, 2021, compared with \$48.2 billion at December 31, 2020. The outstanding balance at June 30, 2021, compared with December 31, 2020, increased as originations exceeded paydowns.

OTHER CONSUMER Other consumer loans, which include revolving credit and installment loans, totaled \$25.9 billion at June 30, 2021, compared with \$24.4 billion at December 31, 2020.

Table 18: Credit Card, Auto, and Other Consumer Loans

(\$ in millions)	June 30, 2021		December 31, 2020	
	Outstanding balance	% of total loans	Outstanding balance	% of total loans

Total	\$ 111,870	13.13%	\$ 109,260	12.31%

(1) Other consumer loans primarily include securities-based loans.

Risk Management – Credit Risk Management (continued)

NONPERFORMING ASSETS (NONACCRUAL LOANS AND FORECLOSED ASSETS) For information about when we generally place loans on nonaccrual status, see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K. Customer payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of nonaccrual loans for those customers who would have otherwise moved into nonaccrual status. For additional

information on customer accommodations, including loan modifications, in response to the COVID-19 pandemic, see the “Risk Management – Credit Risk Management – COVID-Related Lending Accommodations” section in this Report.

Table 19 summarizes nonperforming assets (NPAs) for each of the last four quarters.

Table 19: Nonperforming Assets (Nonaccrual Loans and Foreclosed Assets)

Change in NPAs from prior quarter	\$ (695)		\$ (692)		\$ 709		\$ 378	

- (1) Residential mortgage loans predominantly insured by the FHA or guaranteed by the VA are not placed on nonaccrual status because they are insured or guaranteed.
- (2) Consistent with regulatory reporting requirements, foreclosed real estate resulting from government insured/guaranteed loans are classified as nonperforming. Both principal and interest related to these foreclosed real estate assets are collectible because the loans were predominantly insured by the FHA or guaranteed by the VA. Receivables related to the foreclosure of certain government guaranteed real estate mortgage loans are excluded from this table and included in Accounts Receivable in Other Assets. For additional information on foreclosed assets, see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

Commercial nonaccrual loans decreased \$1.2 billion from December 31, 2020, predominantly due to a decline in commercial and industrial nonaccrual loans, driven by a decrease in oil, gas, and pipeline nonaccrual loans, reflecting improvement in the economic environment. For additional information on commercial and industrial nonaccrual loans, see the “Risk Management – Credit Risk Management – Commercial and Industrial Loans and Lease Financing” section in this Report.

Consumer nonaccrual loans decreased \$127 million from December 31, 2020, driven by a decline in residential mortgage nonaccrual loans.

Table 20 provides an analysis of the changes in nonaccrual loans. Typically, changes to nonaccrual loans period-over-period represent inflows for loans that are placed on nonaccrual status in accordance with our policies, offset by reductions for loans that are paid down, charged off, sold, foreclosed, or are no longer

classified as nonaccrual as a result of continued performance and an improvement in the borrower's financial condition and loan repayment capabilities.

Table 20: Analysis of Changes in Nonaccrual Loans

(in millions)	Quarter ended				
	Jun 30, 2021	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020

Total nonaccrual loans	\$ 7,371	8,055	8,728	8,022	7,605

We believe exposure to loss on nonaccrual loans is mitigated by the following factors at June 30, 2021:

- 96% of total commercial nonaccrual loans and 99% of total consumer nonaccrual loans are secured. Of the consumer nonaccrual loans, 93% are secured by real estate and 93% have a combined LTV (CLTV) ratio of 80% or less.
- 71% of commercial nonaccrual loans were current on interest and 66% of commercial nonaccrual loans were current on both principal and interest, but were on nonaccrual status because the full or timely collection of interest or principal had become uncertain.
- of the \$1.0 billion of consumer loans in bankruptcy or discharged in bankruptcy, and classified as nonaccrual, \$691 million were current.
- the remaining risk of loss of all nonaccrual loans has been considered in developing our allowance for loan losses.

We continue to work with our customers experiencing financial difficulty to determine if they can qualify for a loan modification. Under our proprietary modification programs, customers may be required to provide updated documentation, and some programs require completion of payment during trial periods to demonstrate sustained performance before the loan can be removed from nonaccrual status.

Risk Management – Credit Risk Management (continued)

Table 21 provides a summary of foreclosed assets and an analysis of changes in foreclosed assets.

Table 21: Foreclosed Assets

(in millions)	Quarter ended				
	Jun 30, 2021	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020

Total reductions	(106)	(105)	(107)	(90)	(96)
Balance, end of period	\$ 129	140	159	156	195

(1) Foreclosed government insured/guaranteed loans are temporarily transferred to and held by us as servicer, until reimbursement is received from FHA or VA.

(2) Includes loans moved into foreclosed assets from nonaccrual status and repossessed autos.

Foreclosed assets at June 30, 2021, included \$49 million of foreclosed residential real estate, of which 30% is predominantly FHA insured or VA guaranteed and expected to have minimal or no loss content. The remaining amount of foreclosed assets has been written down to estimated net realizable value. Of the \$129 million in foreclosed assets at June 30, 2021, 61% have been in the foreclosed assets portfolio for one year or less.

As part of our actions to support customers during the COVID-19 pandemic, we have temporarily suspended certain mortgage foreclosure activities, which has affected the amount of our foreclosed assets. For additional information on loans in process of foreclosure, see Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report.

TROUBLED DEBT RESTRUCTURINGS (TDRs) Table 22 provides information regarding the recorded investment of loans modified in TDRs. TDRs decreased from December 31, 2020, due to paydowns and a \$436 million transfer from residential mortgage – first lien loans to LHFS related to the sales of loans purchased from GNMA loan securitization pools in 2020. The amount of our TDRs at June 30, 2021, would have otherwise been higher without the TDR relief provided by the CARES Act and Interagency Statement.

Table 22: TDR Balances

(in millions)	Jun 30, 2021	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020
Commercial:					
Commercial and industrial	\$ 1,225	1,331	1,933	2,082	1,882
Real estate mortgage	645	652	774	805	717

Lease financing	9	9	9	9	10
Total commercial TDRs	1,894	2,013	2,731	2,917	2,629
Consumer:					
Residential mortgage – first lien	8,841	9,446	9,764	9,420	7,176
Residential mortgage – junior lien	1,097	1,174	1,237	1,298	1,309
Credit card	368	411	458	494	510
Auto	196	156	176	156	108
Other consumer	63	67	67	190	173
Trial modifications	77	81	90	91	91
Total consumer TDRs	10,642	11,335	11,792	11,649	9,367
Total TDRs	\$ 12,536	13,348	14,523	14,566	11,996
TDRs on nonaccrual status	\$ 3,711	3,800	4,456	4,163	3,475
TDRs on accrual status:					
Government insured/guaranteed	3,431	3,708	3,721	3,467	1,277
Non-government insured/guaranteed	5,394	5,840	6,346	6,936	7,244
Total TDRs	\$ 12,536	13,348	14,523	14,566	11,996

In those situations where principal is forgiven, the entire amount of such forgiveness is immediately charged off. When we delay the timing on the repayment of a portion of principal (principal forbearance), we charge off the amount of forbearance if that amount is not considered fully collectible. The allowance for loan losses for TDRs was \$360 million and \$565 million at June 30, 2021, and December 31, 2020, respectively. As part of our actions to support customers during the COVID-19 pandemic, we have provided borrowers relief in the form of loan modifications. Under the CARES Act and the Interagency Statement, loan modifications related to the COVID-19 pandemic will not be classified as TDRs if they meet certain eligibility criteria. For additional information on the CARES Act

and the Interagency Statement, see the “Risk Management – Credit Risk Management – Credit Quality Overview – COVID-Related Lending Accommodations” section in this Report.

For information on our nonaccrual policies when a restructuring is involved, see the “Risk Management – Credit Risk Management – Troubled Debt Restructurings (TDRs)” section in our 2020 Form 10-K.

Table 23 provides an analysis of the changes in TDRs. Loans modified more than once as a TDR are reported as inflows only in the period they are first modified. In addition to foreclosures, sales and transfers to held for sale, we may remove loans from TDR classification, but only if they have been refinanced or restructured at market terms and qualify as a new loan.

Table 23: Analysis of Changes in TDRs

(in millions)	Quarter ended				
	Jun 30, 2021	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020

- (1) Inflows include loans that modify, even if they resolve within the period, as well as gross advances on term loans that modified in a prior period and net advances on revolving TDRs that modified in a prior period.
- (2) Other outflows include normal amortization/accretion of loan basis adjustments and loans transferred to held for sale. Occasionally, loans that have been refinanced or restructured at market terms qualify as new loans, which are also included as other outflows.
- (3) Net change in trial modifications includes: inflows of new TDRs entering the trial payment period, net of outflows for modifications that either (i) successfully perform and enter into a permanent modification, or (ii) did not successfully perform according to the terms of the trial period plan and are subsequently charged-off, foreclosed upon or otherwise resolved.

Risk Management – Credit Risk Management (continued)

LOANS 90 DAYS OR MORE PAST DUE AND STILL ACCRUING Loans 90 days or more past due are still accruing if they are (1) well-secured and in the process of collection or (2) residential mortgage loans or consumer loans exempt under regulatory rules from being classified as nonaccrual until later delinquency, usually 120 days past due.

Table 24 reflects loans 90 days or more past due and still accruing by class for loans not government insured/guaranteed. For additional information on delinquencies by loan class, see Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report.

Table 24: Loans 90 Days or More Past Due and Still Accruing

(in millions)	Jun 30, 2021	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020
Total:	\$ 4,703	6,273	7,041	11,698	9,739
Less: FHA insured/VA guaranteed (1)	3,966	5,406	6,351	11,041	8,922
Total, not government insured/guaranteed	\$ 737	867	690	657	817
By segment and class, not government insured/guaranteed:					
Commercial:					
Commercial and industrial	\$ 165	55	39	61	101

Total consumer	460	598	612	549	672
Total, not government insured/guaranteed	\$ 737	867	690	657	817

(1) Represents loans whose repayments are predominantly insured by the FHA or guaranteed by the VA.

Loans 90 days or more past due and still accruing, excluding government insured/guaranteed loans, at June 30, 2021, were up from December 31, 2020, due to an increase in delinquent commercial real estate mortgage loans and commercial and industrial loans, partially offset by a decline in delinquent consumer loans in line with the decrease in our total consumer loan portfolio. Customer payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies for customers who would have otherwise moved into past due status.

Loans 90 days or more past due and still accruing whose repayments are largely insured by the FHA or guaranteed by the VA for mortgages at June 30, 2021, were down from December 31, 2020, largely due to transfers to LHFS related to the sales of loans purchased from GNMA loan securitization pools in prior periods.

NET CHARGE-OFFS Table 25 presents net loan charge-offs for second quarter 2021 and the previous four quarters.

Table 25: Net Loan Charge-offs

(1) Quarterly net charge-offs as a percentage of average respective loans are annualized.

The decrease in commercial net loan charge-offs in second quarter 2021, compared with the prior quarter, was driven by lower charge-offs across the entire portfolio as well as higher recoveries in the CRE portfolio.

The decrease in consumer net loan charge-offs in second quarter 2021, compared with the prior quarter, was driven by lower losses in other consumer loans due to the sale of a portion of our student loan portfolio in first quarter 2021.

The COVID-19 pandemic may continue to impact the credit quality of our loan portfolio. Although the potential impacts were considered in our allowance for credit losses for loans, payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of net loan charge-offs. For additional information on customer accommodations in response to the COVID-19 pandemic, see the “Risk Management – Credit Risk Management – COVID-Related Lending Accommodations” section in this Report.

ALLOWANCE FOR CREDIT LOSSES We maintain an allowance for credit losses (ACL) for loans, which is management’s estimate of the expected life-time credit losses in the loan portfolio and unfunded credit commitments, at the balance sheet date, excluding loans and unfunded credit commitments carried at fair value or held for sale. Additionally, we maintain an ACL for debt securities classified as either AFS or HTM, other financial assets measured at amortized cost, net investments in leases, and other off-balance sheet credit exposures.

We apply a disciplined process and methodology to establish our ACL each quarter. The process for establishing the ACL for loans takes into consideration many factors, including historical and forecasted loss trends, loan-level credit quality ratings and loan grade-specific characteristics. The process involves subjective and complex judgments. In addition, we review a variety of credit metrics and trends. These credit metrics and trends, however, do not solely determine the amount of the allowance as we use several analytical tools. For additional information on our ACL, see the “Critical Accounting Policies – Allowance for Credit Losses” section and Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K. For additional information on our ACL for loans, see Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report, and for additional information on our ACL for debt securities, see the “Balance Sheet Analysis – Available-For-Sale and Held-To-Maturity Debt Securities” section and Note 3 (Available-for-Sale and Held-to-Maturity Debt Securities) to Financial Statements in this Report.

Risk Management – Credit Risk Management (continued)

Table 26 presents the allocation of the ACL for loans by loan portfolio segment and class for the most recent quarter and last four year ends.

Table 26: Allocation of the ACL for Loans (1)

(1) Disclosure is not comparative due to our adoption of Accounting Standards Update (ASU) 2016-13, Financial Instruments – Credit Losses (Topic 326): Measurement of Credit Losses on Financial Instruments (CECL) on January 1, 2020. For additional information, see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

(2) Total net loan charge-offs are annualized for the quarter ended June 30, 2021.

The ratios for the allowance for loan losses and the ACL for loans presented in Table 26 may fluctuate from period to period due to such factors as the mix of loan types in the portfolio, borrower credit strength, and the value and marketability of collateral.

The ACL for loans decreased \$3.3 billion, or 17%, from December 31, 2020, reflecting better portfolio credit quality and improvements in current and forecasted economic conditions. Total provision for credit losses for loans was \$(1.2) billion in second quarter 2021, compared with \$9.6 billion in the same period a year ago, reflecting lower net charge-offs and improvements in current and forecasted economic conditions. The detail of the changes in the ACL for loans by portfolio segment (including charge-offs and recoveries by loan class) is included in Note 4 (Loans and Related Allowance for Credit Losses) to Financial Statements in this Report.

We consider multiple economic scenarios to develop our estimate of the ACL for loans. The scenarios generally include a base scenario, along with an optimistic (upside) and one or more pessimistic (downside) scenarios. Our estimate of the ACL for loans at June 30, 2021, was based on a weighting of the base and a downside economic scenario of 50% and 50%, respectively, with no weighting applied to an upside scenario. The base scenario assumed economic improvements in the near term with a return to normalized levels near the end of 2022. The downside scenario assumed sustained adverse economic impacts resulting from the

COVID-19 pandemic, compared with the base scenario. The downside scenario assumed U.S. real GDP growth rates decline in the first half of 2022 before returning to normalized levels after 2023 and the U.S. unemployment rate increases through 2022 and peaks in the first half of 2023. We considered within each scenario our expectations for the impact of customer accommodation activity, as well as the estimated impact on certain industries that we consider to be directly and most adversely affected by the COVID-19 pandemic.

In addition to quantitative estimates, we consider qualitative factors that represent risks inherent in our processes and assumptions such as economic environmental factors, modeling assumptions and performance, and other subjective factors, including industry trends and emerging risk assessments. We also considered the significant uncertainty related to the duration and severity of the economic impacts from the COVID-19 pandemic and the incremental risks to our loan portfolio.

The forecasted key economic variables used in our estimate of the ACL for loans at June 30 and March 31, 2021, are presented in Table 27.

Table 27: Forecasted Key Economic Variables

	4Q 2021	2Q 2022	4Q 2022
Blend of economic scenarios (1):			
U.S. unemployment rate (2):

June 30, 2021	1.0	(0.4)	0.6
Home price index (4):			
March 31, 2021	1.0	(5.2)	(5.7)
June 30, 2021	2.8	(6.5)	(5.2)
Commercial real estate asset prices (4):			
March 31, 2021	(10.0)	(11.5)	(9.0)
June 30, 2021	(7.8)	(11.9)	(10.4)

- (1) Represents a weighting of the forecasted economic variable inputs based on a weighting of 50% for the base and 50% for a downside scenario at both June 30 and March 31, 2021.
(2) Quarterly average.
(3) Percent change from the preceding period, seasonally adjusted annualized rate.
(4) Percent change year over year of national average; outlook differs by geography and property type.

Future amounts of the ACL for loans will be based on a variety of factors, including loan balance changes, portfolio credit quality and mix changes, and changes in general economic conditions and expectations (including for unemployment and GDP), among other factors. We observed economic improvements in the first half of 2021; however, there remained significant uncertainty related to the length and severity of the economic impact of the COVID-19 pandemic and the impact of other factors that may influence the level of eventual losses and corresponding requirements for future amounts of the ACL, including the impact of economic stimulus programs and customer accommodation activity. The COVID-19 pandemic could continue to impact the recognition of credit losses in our loan portfolios and may result in increases in our ACL, particularly if the impact on the economy worsens.

We believe the ACL for loans of \$16.4 billion at June 30, 2021, was appropriate to cover expected credit losses, including unfunded credit commitments, at that date. The entire allowance is available to absorb credit losses from the total loan portfolio. The ACL for loans is subject to change and reflects existing factors as of the date of determination, including economic or market conditions and ongoing internal and external examination processes. Due to the sensitivity of the ACL for loans to changes in the economic and business environment, it is possible that we will incur incremental credit losses not anticipated as of the balance sheet date. Our process for determining the ACL is discussed in the “Critical Accounting Policies – Allowance for Credit Losses” section and Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

LIABILITY FOR MORTGAGE LOAN REPURCHASE LOSSES For information on our repurchase liability, see the “Risk Management – Credit Risk Management – Liability For Mortgage Loan Repurchase Losses” section in our 2020 Form 10-K.

RISKS RELATING TO SERVICING ACTIVITIES In addition to servicing loans in our portfolio, we act as servicer and/or master servicer of residential mortgage loans included in GSE-guaranteed mortgage securitizations, GNMA-guaranteed mortgage securitizations of FHA-insured/VA-guaranteed mortgages and

private label mortgage securitizations, as well as for unsecuritized loans owned by institutional investors.

As a servicer, we are required to advance certain delinquent payments of principal and interest on mortgage loans we service. The amount and timing of reimbursement of advances of delinquent payments vary by investor and the applicable servicing agreements. Due to payment deferrals provided as a result of the COVID-19 pandemic, the amount of our servicing advances of principal and interest remained elevated. The amount of these advances may increase if additional payment deferrals are provided. Payment deferrals also delay the collection of contractually specified servicing fees, resulting in lower net servicing income.

Upon transfer as servicer, we retain the option to repurchase loans from GNMA loan securitization pools, which becomes exercisable when three scheduled loan payments remain unpaid by the borrower. We generally repurchase these loans for cash and as a result, our total consolidated assets do not change. As a result of the COVID-19 pandemic, our repurchases of these loans were elevated in 2020 but returned to more normalized levels in the first half of 2021.

Repurchased loans that regain current status or are otherwise modified in accordance with applicable servicing guidelines may be included in future GNMA loan securitization pools. However, in accordance with guidance issued by GNMA, certain loans repurchased after June 30, 2020, are ineligible for inclusion in future GNMA loan securitization pools until the borrower has timely made six consecutive payments. This requirement may delay our ability to resell loans into the securitization market.

For additional information about the risks related to our servicing activities, see the “Risk Management – Credit Risk Management – Risks Relating to Servicing Activities” section in our 2020 Form 10-K. For additional information on mortgage banking activities, see Note 9 (Mortgage Banking Activities) to Financial Statements in this Report.

Asset/Liability Management

Asset/liability management involves evaluating, monitoring and managing interest rate risk, market risk, liquidity and funding. For information on our oversight of asset/liability risks, see the “Risk Management – Asset/Liability Management” section in our 2020 Form 10-K.

INTEREST RATE RISK Interest rate risk is created in our role as a financial intermediary for customers based on investments such as loans and other extensions of credit and debt securities. Interest rate risk can have a significant impact to our earnings. We are subject to interest rate risk because:

- assets and liabilities may mature or reprice at different times. If assets reprice faster than liabilities and interest rates are generally rising, earnings will initially increase;
- assets and liabilities may reprice at the same time but by different amounts;
- short-term and long-term market interest rates may change by different amounts. For example, the shape of the yield curve may affect yield for new loans and funding costs differently;
- the remaining maturity for various assets or liabilities may shorten or lengthen as interest rates change. For example, if long-term mortgage interest rates increase sharply, MBS held in the debt securities portfolio may pay down at a slower rate than anticipated, which could impact portfolio income; or

Risk Management – Asset/Liability Management (continued)

- interest rates may have a direct or indirect effect on loan demand, collateral values, credit losses, mortgage origination volume, and the fair value of MSRs and other financial instruments.

We assess interest rate risk by comparing outcomes under various net interest income simulations using many interest rate scenarios that differ in the direction of interest rate changes, the degree of change over time, the speed of change and the projected shape of the yield curve. These simulations require assumptions regarding drivers of earnings and balance sheet composition such as loan originations, prepayment speeds on loans and debt securities, deposit flows and mix, as well as pricing strategies.

Our most recent simulations, as presented in Table 28, estimate net interest income sensitivity over the next 12 months using instantaneous movements across the yield curve with both lower and higher interest rates relative to our base scenario. Steeper and flatter scenarios measure non-parallel changes in the yield curve, with long-term interest rates defined as all tenors three years and longer (e.g., 10-year U.S. Treasury securities) and short-term interest rates defined as all tenors less than three years. Where applicable, U.S. dollar interest rates are floored at 0.00%. The following describes the simulation assumptions for the scenarios presented in Table 28:

- Simulations are dynamic and reflect anticipated changes to our assets and liabilities.
- Other macroeconomic variables that could be correlated with the changes in interest rates are held constant.
- Mortgage prepayment and origination assumptions vary across scenarios and reflect only the impact of the higher or lower interest rates.
- Our base scenario deposit forecast incorporates mix changes consistent with the base interest rate trajectory. Deposit mix is modeled to be the same as in the base scenario across the alternative scenarios. In higher interest rate scenarios, customer activity that shifts balances into higher-yielding products could reduce expected net interest income.
- We hold the size of the projected debt and equity securities portfolios constant across scenarios.

Table 28: Net Interest Income Sensitivity

(\$ in billions)	Jun 30, 2021	Dec 31, 2020
Parallel Shift:		
+100 bps shift in interest rates	\$ 7.0	6.7
-100 bps shift in interest rates	(2.9)	(2.7)
Steeper yield curve:		
+50 bps shift in long-term interest rates	1.2	1.3
Flatter yield curve:		
+50 bps shift in short-term interest rates	2.5	2.2
-50 bps shift in long-term interest rates	(1.2)	(1.4)

The interest rate sensitivity included in Table 28 indicates that we would expect to benefit from higher interest rates as our assets would reprice faster and to a greater degree than our liabilities, while in the case of lower interest rates, our assets would reprice downward and to a greater degree than our liabilities resulting in lower net interest income.

The sensitivity results above do not capture noninterest income or expense impacts. Our interest rate sensitive noninterest income and expense are predominantly driven by mortgage banking activities, and may move in the opposite direction of our net interest income. See the “Risk Management

– Asset/Liability Management – Mortgage Banking Interest Rate and Market Risk” section in our 2020 Form 10-K for additional information. For additional information on our trading assets and liabilities, see Note 2 (Trading Activities) to Financial Statements in this Report.

We use the debt securities portfolio and exchange-traded and over-the-counter (OTC) interest rate derivatives to manage our interest rate exposures. See Note 1 (Summary of Significant Accounting Policies), Note 3 (Available-for-Sale and Held-to-Maturity Debt Securities) and Note 14 (Derivatives) to Financial Statements in our 2020 Form 10-K for additional information.

MORTGAGE BANKING INTEREST RATE AND MARKET RISK We originate, fund and service mortgage loans, which subjects us to various risks, including credit, liquidity and interest rate risks. For additional information on mortgage banking interest rate and market risk, see Note 9 (Mortgage Banking Activities) to Financial Statements in this Report and the “Risk Management – Asset/Liability Management – Mortgage Banking Interest Rate and Market Risk” section in our 2020 Form 10-K.

Hedging the various sources of interest rate risk in mortgage banking is a complex process that requires sophisticated modeling and constant monitoring. There are several potential risks to earnings from mortgage banking related to origination volumes and mix, valuation of MSRs and associated hedging results, the relationship and degree of volatility between short-term and long-term interest rates, and changes in servicing and foreclosures costs. While we attempt to balance our mortgage banking interest rate and market risks, the financial instruments we use may not perfectly correlate with the values and income being hedged.

MARKET RISK Market risk is the risk of possible economic loss from adverse changes in market risk factors such as interest rates, credit spreads, foreign exchange rates, equity and commodity prices, and the risk of possible loss due to counterparty exposure. This applies to implied volatility risk, basis risk, and market liquidity risk. It also includes price risk in the trading book, mortgage servicing rights and the hedge effectiveness risk associated with the mortgage book, and impairment on private equity investments. For information on our oversight of market risk, see the “Risk Management – Asset/Liability Management – Market Risk” section in our 2020 Form 10-K.

MARKET RISK – TRADING ACTIVITIES We engage in trading activities to accommodate the investment and risk management activities of our customers and to execute economic hedging to manage certain balance sheet risks. These trading activities predominantly occur within our CIB businesses and to a lesser extent other businesses of the Company. Debt securities held for trading, equity securities held for trading, trading loans and trading derivatives are financial instruments used in our trading activities, and all are carried at fair value. Income earned on the financial instruments used in our trading activities include net interest income, changes in fair value and realized gains and losses. Net interest income earned from our trading activities is reflected in the interest income and interest expense components of our consolidated statement of income. Changes in fair value of the financial instruments used in our trading activities are reflected in net gains from trading activities. For additional information on the financial instruments used in our trading activities and the income from these trading activities, see Note 2 (Trading Activities) to Financial Statements in this Report.

Value-at-risk (VaR) is a statistical risk measure used to estimate the potential loss from adverse moves in the financial markets. The Company uses VaR metrics complemented with sensitivity analysis and stress testing in measuring and monitoring market risk. For additional information on our monitoring activities, sensitivity analysis and stress testing, see the “Risk Management – Asset/Liability Management – Market Risk – Trading Activities” section in our 2020 Form 10-K.

Trading VaR is the measure used to provide insight into the market risk exhibited by the Company’s trading positions. The Company calculates Trading VaR for risk management purposes to establish line of business and Company-wide risk limits. Trading VaR is calculated based on all trading positions on our consolidated balance sheet.

Table 29 shows the Company’s Trading General VaR by risk category. The decrease in average Company Trading General VaR for the quarter ended June 30, 2021, compared with the same period a year ago, was driven by a greater presence of market volatility dropping out of the 12-month historical lookback window used to calculate average Company Trading General VaR for the quarter ended June 30, 2021. Market volatility present in average Company Trading General VaR for the quarter ended June 30, 2020, was driven by the introduction of the COVID-19 pandemic, in particular, changes in interest rate curves and a significant widening of credit spreads.

Table 29: Trading 1-Day 99% General VaR by Risk Category

(in millions)	June 30, 2021				March 31, 2021				Quarter ended June 30, 2020			
	Period end	Average	Low	High	Period end	Average	Low	High	Period end	Average	Low	High
	Company Trading General VaR Risk Categories											
Credit	\$ 14	21	12	30	22	94	21	112	86	82	61	99
Interest rate	7	7	4	22	36	73	26	120	155	106	42	161
Equity	29	37	25	56	35	36	28	72	14	10	6	17
Commodity	28	7	2	28	11	5	2	12	4	4	2	7
Foreign exchange	0	1	0	1	1	1	1	1	1	2	1	3
Diversification benefit (1)	(38)	(30)			(64)	(111)			(51)	(49)		
Company Trading General VaR	40	43			41	98			209	155		

(1) The period-end VaR was less than the sum of the VaR components described above, which is due to portfolio diversification. The diversification effect arises because the risks are not perfectly correlated causing a portfolio of positions to usually be less risky than the sum of the risks of the positions alone. The diversification benefit is not meaningful for low and high metrics since they may occur on different days.

MARKET RISK – EQUITY SECURITIES We are directly and indirectly affected by changes in the equity markets. We make and manage direct investments in start-up businesses, emerging growth companies, management buy-outs, acquisitions and corporate recapitalizations. We also invest in non-affiliated funds that make similar private equity investments. For additional information, see the “Risk Management – Asset/Liability Management – Market Risk – Equity Securities” section in our 2020 Form 10-K.

We also have marketable equity securities that include investments relating to our venture capital activities. The fair value changes in these marketable equity securities are recognized in net income. For additional information, see Note 6 (Equity Securities) to Financial Statements in this Report.

Changes in equity market prices may also indirectly affect our net income by (1) the value of third-party assets under management and, hence, fee income, (2) borrowers whose ability to repay principal and/or interest may be affected by the stock market, or (3) brokerage activity, related commission income and other business activities. Each business line monitors and manages these indirect risks.

LIQUIDITY RISK AND FUNDING In the ordinary course of business, we enter into contractual obligations that may require future cash payments, including funding for customer loan requests, customer deposit maturities and withdrawals, debt service, leases for premises and equipment, and other cash commitments. The objective of effective liquidity management is to ensure that we can meet our contractual obligations and other cash commitments efficiently under both normal operating conditions and under periods of Wells Fargo-specific and/or market stress. To help achieve this objective, we monitor both

the consolidated company and the Parent on a stand-alone basis to ensure that the Parent is a source of strength for its regulated, deposit-taking banking subsidiaries. The Parent acts as a source of funding for the Company through the issuance of long-term debt and equity, and WFC Holdings, LLC, an intermediate holding company and subsidiary of the Parent (the “IHC”), provides funding support for the ongoing operational requirements of the Parent and certain of its direct and indirect subsidiaries. For additional information on liquidity risk and funding management, see the “Risk Management – Liquidity Risk and Funding” section in our 2020 Form 10-K. For additional information on the IHC, see the “Regulatory Matters – ‘Living Will’ Requirements and Related Matters” section in this Report.

Liquidity Standards We are subject to a rule, issued by the FRB, OCC and FDIC, that establishes a quantitative minimum liquidity requirement consistent with the liquidity coverage ratio (LCR) established by the Basel Committee on Banking Supervision (BCBS). The rule requires a covered banking organization, such as Wells Fargo, to hold high-quality liquid assets (HQLA), predominantly consisting of central bank deposits, government debt securities, and mortgage-backed securities of federal agencies that can be converted easily and quickly into cash, in an amount equal to or greater than its projected net cash outflows during a 30-day stress period. The LCR applies to the Company on a consolidated basis and to our insured depository institutions (IDIs) with total assets of \$10 billion or more. In addition, rules issued by the FRB impose enhanced liquidity risk management standards on large bank holding companies (BHCs), such as Wells Fargo.

The FRB, OCC and FDIC have also issued a rule implementing a stable funding requirement, known as the net stable funding

Risk Management – Asset/Liability Management (continued)

ratio (NSFR), which requires a covered banking organization, such as Wells Fargo, to maintain a minimum amount of stable funding, including common equity, long-term debt and most types of deposits, in relation to its assets, derivative exposures and commitments over a one-year horizon period. The NSFR became effective on July 1, 2021, and applies to the Company on a consolidated basis and to our IDIs with total assets of \$10 billion or more. As of July 1, 2021, we were compliant with the NSFR requirement.

Liquidity Coverage Ratio As of June 30, 2021, the consolidated Company, Wells Fargo Bank, N.A., and Wells Fargo National Bank West exceeded the minimum LCR requirement of 100%, which is calculated as HQLA divided by projected net cash outflows, as each is defined under the LCR rule. Table 30 presents the Company's quarterly average values for the daily-calculated LCR and its components calculated pursuant to the LCR rule requirements.

Table 30: Liquidity Coverage Ratio

(in millions, except ratio)	Average for Quarter ended		
	Jun 30, 2021	Mar 31, 2021	Jun 30, 2020
HQLA (1):			
Eligible cash	\$ 248,404	216,403	166,947
Eligible securities (2)	137,718	186,270	242,520
Total HQLA	386,122	402,673	409,467
Projected net cash outflows	314,678	316,116	316,268
LCR	123%	127	129

(1) Excludes excess HQLA at certain subsidiaries that is not transferable to other Wells Fargo entities.
(2) Net of applicable haircuts required under the LCR rule.

Liquidity Sources We maintain liquidity in the form of cash, cash equivalents and unencumbered high-quality, liquid debt securities. These assets make up our primary sources of liquidity. Our primary sources of liquidity are substantially the same in composition as HQLA under the LCR rule; however, our primary sources of liquidity will generally exceed HQLA calculated under the LCR rule due to the applicable haircuts to HQLA and the exclusion of excess HQLA at our subsidiary IDIs required under the LCR rule. Our primary sources of liquidity are presented in Table 31, which also includes encumbered securities that are not included as available HQLA in the calculation of the LCR.

Our cash is predominantly on deposit with the Federal Reserve. Debt securities included as part of our primary sources of liquidity are comprised of U.S. Treasury and federal agency debt, and MBS issued by federal agencies within our debt securities portfolio. We believe these debt securities provide quick sources of liquidity through sales or by pledging to obtain financing, regardless of market conditions. Some of these debt securities are within our HTM portfolio and, as such, are not intended for sale but may be pledged to obtain financing.

Table 31: Primary Sources of Liquidity

(in millions)	June 30, 2021			December 31, 2020		
	Total	Encumbered	Unencumbered	Total	Encumbered	Unencumbered
Interest-earning deposits with banks	\$ 248,869	—	248,869	236,376	—	236,376
Debt securities of U.S. Treasury and federal agencies	63,934	3,304	60,630	70,756	5,370	65,386
Mortgage-backed securities of federal agencies	280,984	52,700	228,284	258,668	49,156	209,512
Total	\$ 593,787	56,004	537,783	565,800	54,526	511,274

In addition to our primary sources of liquidity shown in Table 31, liquidity is also available through the sale or financing of other debt securities including trading and/or AFS debt securities, as well as through the sale, securitization or financing of loans, to the extent such debt securities and loans are not encumbered. As of June 30, 2021, we also maintained approximately \$222.7 billion of available borrowing capacity at various Federal Home Loan Banks and the Federal Reserve Discount Window.

Deposits have historically provided a sizable source of relatively low-cost funds. Deposits were 169% and 158% of total loans at June 30, 2021, and December 31, 2020, respectively. Additional funding is provided by long-term debt and short-term borrowings. Table 32 shows selected information for short-term borrowings, which generally mature in less than 30 days. We pledge certain financial instruments that we own to collateralize repurchase agreements and other securities financings. For additional information, see the "Pledged Assets" section of Note 12 (Pledged Assets and Collateral) to Financial Statements in this Report.

Table 32: Short-Term Borrowings

(in millions)	Quarter ended				
	Jun 30, 2021	Mar 31, 2021	Dec 31, 2020	Sep 30, 2020	Jun 30, 2020
Balance, period end					
Federal funds purchased and securities sold under agreements to repurchase	\$ 33,708	46,871	46,362	44,055	49,659
Other short-term borrowings	11,927	12,049	12,637	11,169	10,826
Total	\$ 45,635	58,920	58,999	55,224	60,485
Average daily balance for period					
Federal funds purchased and securities sold under agreements to repurchase	\$ 36,526	47,358	46,069	46,504	52,868
Other short-term borrowings	11,979	11,724	11,235	10,788	10,667
Total	\$ 48,505	59,082	57,304	57,292	63,535
Maximum month-end balance for period					
Federal funds purchased and securities sold under agreements to repurchase (1)	\$ 33,708	47,050	46,879	49,148	50,397
Other short-term borrowings (2)	12,563	12,049	12,637	11,169	11,220

(1) Maximum month-end balance in each of the last five quarters was in June and February 2021, and November, July and April 2020.

(2) Maximum month-end balance in each of the last five quarters was in April and March 2021, and December, September and April 2020.

Long-Term Debt We access domestic and international capital markets for long-term funding (generally greater than one year) through issuances of registered debt securities, private placements and asset-backed secured funding. We issue long-term debt in a variety of maturities and currencies to achieve cost-efficient funding and to maintain an appropriate maturity profile. Proceeds from securities issued were used for general corporate purposes, and, unless otherwise specified in the applicable prospectus or prospectus supplement, we expect the proceeds from securities issued in the future will be used for the

same purposes. Depending on market conditions, we may purchase our outstanding debt securities from time to time in privately negotiated or open market transactions, by tender offer, or otherwise. We issued \$1.0 billion and \$1.1 billion of long-term debt in the second quarter and first half of 2021, respectively. Table 33 provides the aggregate carrying value of long-term debt maturities (based on contractual payment dates) for the remainder of 2021 and the following years thereafter, as of June 30, 2021.

Table 33: Maturity of Long-Term Debt

(in millions)	June 30, 2021						
	Remaining 2021	2022	2023	2024	2025	Thereafter	Total
Wells Fargo & Company (Parent Only)

Risk Management – Asset/Liability Management (continued)

Credit Ratings Investors in the long-term capital markets, as well as other market participants, generally will consider, among other factors, a company’s debt rating in making investment decisions. Rating agencies base their ratings on many quantitative and qualitative factors, including capital adequacy, liquidity, asset quality, business mix, the level and quality of earnings, and rating agency assumptions regarding the probability and extent of federal financial assistance or support for certain large financial institutions. Adverse changes in these factors could result in a reduction of our credit rating; however, our debt securities do not contain credit rating covenants.

On April 22, 2021, Moody’s Investors Service (Moody’s) affirmed our ratings and retained the negative ratings outlook. On July 12, 2021, Moody’s upgraded the senior debt rating of the Company to A1 from A2 as a result of revisions to its bank

ratings methodology. On May 24, 2021, DBRS Morningstar confirmed our ratings and retained the negative ratings trend. On June 14, 2021, Fitch Ratings affirmed our ratings and retained the negative ratings outlook.

See the “Risk Factors” section in our 2020 Form 10-K for additional information regarding our credit ratings and the potential impact a credit rating downgrade would have on our liquidity and operations, as well as Note 14 (Derivatives) to Financial Statements in this Report for information regarding additional collateral and funding obligations required for certain derivative instruments in the event our credit ratings were to fall below investment grade.

The credit ratings of the Parent and Wells Fargo Bank, N.A., as of June 30, 2021, are presented in Table 34.

Table 34: Credit Ratings as of June 30, 2021

	Wells Fargo & Company		Wells Fargo Bank, N.A.	
	Senior debt	Short-term borrowings	Long-term deposits	Short-term borrowings
Moody’s	A2	P-1	Aa1	P-1
S&P Global Ratings	BBB+	A-2	A+	A-1
Fitch Ratings	A+	F1	AA	F1+
DBRS Morningstar	AA (low)	R-1 (middle)	AA	R-1 (high)

FEDERAL HOME LOAN BANK MEMBERSHIP The Federal Home Loan Banks (the FHLBs) are a group of cooperatives that lending institutions use to finance housing and economic development in local communities. We are a member of the FHLBs based in Dallas, Des Moines and San Francisco. FHLB members are required to maintain a minimum investment in capital stock of the applicable FHLB. The board of directors of each FHLB can increase the minimum investment requirements in the event it has concluded that additional capital is required to allow it to meet its own regulatory capital requirements. Any increase in the minimum investment requirements outside of specified ranges requires the approval of the Federal Housing Finance Agency. Because the extent of any obligation to increase our investment in any of the FHLBs depends entirely upon the occurrence of a future event, the amount of any future investment in the capital stock of the FHLBs is not determinable.

Capital Management

We have an active program for managing capital through a comprehensive process for assessing the Company's overall capital adequacy. Our objective is to maintain capital at an amount commensurate with our risk profile and risk tolerance objectives, and to meet both regulatory and market expectations. We primarily fund our capital needs through the retention of earnings net of both dividends and share repurchases, as well as through the issuance of preferred stock and long- and short-term debt. Retained earnings at June 30, 2021, increased \$9.1 billion from December 31, 2020, predominantly as a result of \$10.7 billion of Wells Fargo net income, partially offset by \$1.5 billion of common and preferred stock dividends. During the first half of 2021, we issued \$819 million of common stock, substantially all of which was issued in connection with employee compensation and benefits. During the first half of 2021, we repurchased 53 million shares of common stock at a cost of \$2.2 billion. For additional information about capital planning, see the "Capital Planning and Stress Testing" section below.

In the first half of 2021, we issued \$4.6 billion of preferred stock and redeemed \$4.9 billion of preferred stock, including the redemption of the remaining \$350 million of our Preferred Stock, Series N, in June 2021. In July 2021, we issued \$1.25 billion of our Preferred Stock, Series DD. For additional information, see Note 16 (Preferred Stock) to Financial Statements in this Report.

Regulatory Capital Requirements

The Company and each of our IDIs are subject to various regulatory capital adequacy requirements administered by the FRB and the OCC. Risk-based capital rules establish risk-adjusted ratios relating regulatory capital to different categories of assets and off-balance sheet exposures as discussed below.

RISK-BASED CAPITAL AND RISK-WEIGHTED ASSETS The Company is subject to rules issued by federal banking regulators to implement Basel III capital requirements for U.S. banking organizations. The rules contain two frameworks for calculating capital requirements, a Standardized Approach and an Advanced Approach applicable to certain institutions, including Wells Fargo. Our capital adequacy is assessed based on the lower of our risk-based capital ratios calculated under the two approaches. The Company is required to satisfy the risk-based capital ratio requirements to avoid restrictions on capital distributions and discretionary bonus payments. Table 35 and Table 36 present the risk-based capital requirements applicable to the Company on a fully phased-in basis under the Standardized Approach and Advanced Approach, respectively, as of June 30, 2021.

Table 35: Risk-Based Capital Requirements – Standardized Approach

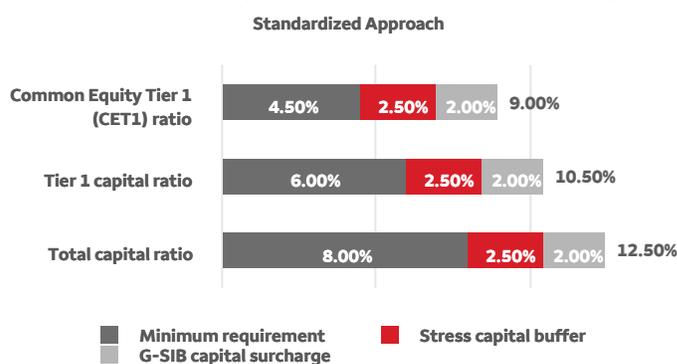

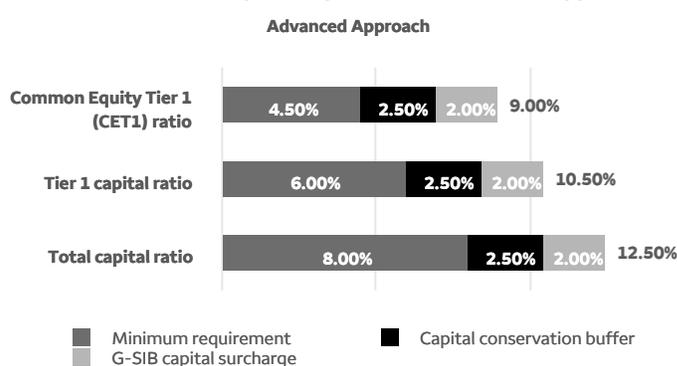

Table 36: Risk-Based Capital Requirements – Advanced Approach

In addition to the risk-based capital requirements described in Table 35 and Table 36, if the FRB determines that a period of excessive credit growth is contributing to an increase in systemic risk, a countercyclical buffer of up to 2.50% could be added to the risk-based capital ratio requirements under federal banking regulations.

The capital conservation buffer is applicable to certain institutions, including Wells Fargo, under the Advanced Approach and is intended to absorb losses during times of economic or financial stress.

The stress capital buffer is calculated based on the decrease in a BHC's risk-based capital ratios under the severely adverse scenario in the FRB's annual supervisory stress test and related Comprehensive Capital Analysis and Review (CCAR), plus four quarters of planned common stock dividends. Because the stress capital buffer is calculated annually based on data that can differ over time, our stress capital buffer, and thus our risk-based capital ratio requirements under the Standardized Approach, are subject to change in future periods. The Company's stress capital buffer for the period October 1, 2020, through September 30, 2021, is 2.50%. The Company expects its stress capital buffer for the period October 1, 2021, through September 30, 2022, to be 3.10%. The FRB has indicated that it will publish the final stress capital buffer for the period October 1, 2021, through September 30, 2022, for each BHC by August 31, 2021.

Capital Management (continued)

As a global systemically important bank (G-SIB), we are also subject to the FRB's rule implementing an additional capital surcharge of between 1.00-4.50% on the risk-based capital requirements of G-SIBs. Under the rule, we must annually calculate our surcharge under two methods and use the higher of the two surcharges. The first method (method one) considers our size, interconnectedness, cross-jurisdictional activity, substitutability, and complexity, consistent with the methodology developed by the BCBS and the Financial Stability Board (FSB). The second method (method two) uses similar inputs, but replaces substitutability with use of short-term wholesale funding and will generally result in higher surcharges than under method one. Because the G-SIB capital surcharge is calculated annually based on data that can differ over time, the amount of the surcharge is subject to change in future years. We expect our G-SIB capital surcharge to decrease by 50 basis points to 1.50% beginning in first quarter 2022, subject to finalization in fourth quarter 2021.

The Basel III capital requirements for calculating CET1 and tier 1 capital, along with risk-weighted assets (RWAs), are fully phased-in. However, the requirements for determining tier 2 and total capital are still in accordance with transition requirements and are scheduled to be fully phased-in by the end of 2021.

Under the risk-based capital rules, on-balance sheet assets and credit equivalent amounts of derivatives and off-balance sheet items are assigned to one of several broad risk categories

according to the obligor, or, if relevant, the guarantor or the nature of any collateral. The aggregate dollar amount in each risk category is then multiplied by the risk weight associated with that category. The resulting weighted values from each of the risk categories are aggregated for determining total RWAs.

The tables that follow provide information about our risk-based capital and related ratios as calculated under Basel III capital rules. Although we report certain capital amounts and ratios in accordance with transition requirements for bank regulatory reporting purposes, we manage our capital on a fully phased-in basis. For information about our capital requirements calculated in accordance with transition requirements, see Note 23 (Regulatory Capital Requirements and Other Restrictions) to Financial Statements in this Report.

Table 37 summarizes our CET1, tier 1 capital, total capital, RWAs and capital ratios on a fully phased-in basis at June 30, 2021, and December 31, 2020. Fully phased-in total capital amounts and ratios are considered non-GAAP financial measures that are used by management, bank regulatory agencies, investors and analysts to assess and monitor the Company's capital position. See Table 38 for information regarding the calculation and components of our CET1, tier 1 capital, total capital and RWAs, as well as a corresponding reconciliation to GAAP financial measures for our fully phased-in total capital amounts.

Table 37: Capital Components and Ratios (Fully Phased-In)

(in millions, except ratios)	Required Capital Ratios (1)	June 30, 2021		December 31, 2020		
		Advanced Approach	Standardized Approach	Advanced Approach	Standardized Approach	
Common Equity Tier 1	(A)	\$ 143,442	143,442	138,297	138,297	
Tier 1 Capital	(B)	162,999	162,999	158,196	158,196	
Total Capital	(C)	190,147	200,130	186,803	196,529	
Risk-Weighted Assets	(D)	1,126,535	1,188,727	1,158,355	1,193,744	
Common Equity Tier 1 Capital Ratio	(A)/(D)	9.00 %	12.73	12.07 *	11.94	11.59 *
Tier 1 Capital Ratio	(B)/(D)	10.50	14.47	13.71 *	13.66	13.25 *
Total Capital Ratio	(C)/(D)	12.50	16.88	16.84 *	16.14 *	16.47

* Denotes the binding ratio based on the lower calculation under the Advanced and Standardized Approaches.

(1) Represents the minimum ratios required to avoid restrictions on capital distributions and discretionary bonus payments. The required ratios were the same under both the Standardized and Advanced Approaches at June 30, 2021.

Table 38 provides information regarding the calculation and composition of our risk-based capital under the Advanced and Standardized Approaches at June 30, 2021, and December 31, 2020.

Table 38: Risk-Based Capital Calculation and Components

(in millions)	June 30, 2021		December 31, 2020

Credit risk (6)	\$ 729,917	1,140,459	752,999	1,125,813
Market risk	48,268	48,268	67,931	67,931
Operational risk	348,350	—	337,425	—
Total RWAs	\$ 1,126,535	1,188,727	1,158,355	1,193,744

(1) In second quarter 2021, we elected to change our accounting method for low-income housing tax credit investments and elected to change the presentation of investment tax credits related to solar energy investments. Prior period total equity was revised to conform with the current period presentation. Prior period risk-based capital and certain other regulatory related metrics were not revised.

(2) Determined by applying the combined federal statutory rate and composite state income tax rates to the difference between book and tax basis of the respective goodwill and intangible assets at period end.

(3) At June 30, 2021, the impact of the CECL transition provision issued by federal banking regulators on our regulatory capital was an increase in capital of \$879 million, reflecting a \$991 million (post-tax) increase in capital recognized upon our initial adoption of CECL, offset by 25% of the \$7.5 billion increase in our ACL under CECL from January 1, 2020, through June 30, 2021.

(4) Under the Advanced Approach the allowance for credit losses that exceeds expected credit losses is eligible for inclusion in tier 2 capital, to the extent the excess allowance does not exceed 0.60% of Advanced credit RWAs, and under the Standardized Approach, the allowance for credit losses is includable in tier 2 capital up to 1.25% of Standardized credit RWAs, in each case with any excess allowance for credit losses being deducted from the respective total RWAs.

(5) RWAs calculated under the Advanced Approach utilize a risk-sensitive methodology, which relies upon the use of internal credit models based upon our experience with internal rating grades.

Advanced Approach also includes an operational risk component, which reflects the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events.

(6) Includes an increase of \$547 million under the Standardized Approach and a decrease of \$1.4 billion under the Advanced Approach related to the impact of the CECL transition provision on our excess allowance for credit losses as of June 30, 2021. See footnote (4) to this table.

Capital Management (continued)

Table 39 presents the changes in CET1 for the six months ended June 30, 2021.

Table 39: Analysis of Changes in Common Equity Tier 1

(in millions)		
Common Equity Tier 1 at December 31, 2020	\$	138,297
Net income applicable to common stock		9,999

Net change in operational risk RWAs	10,925	—
Total change in RWAs	(31,820)	(5,017)
RWAs at June 30, 2021	\$ 1,126,535	1,188,727

- (1) Includes an increase of \$547 million under the Standardized Approach and a decrease of \$1.4 billion under the Advanced Approach related to the impact of the CECL transition provision on our excess allowance for credit losses. See Table 38 for additional information.

TANGIBLE COMMON EQUITY We also evaluate our business based on certain ratios that utilize tangible common equity. Tangible common equity is a non-GAAP financial measure and represents total equity less preferred equity, noncontrolling interests, goodwill, certain identifiable intangible assets (other than MSRs) and goodwill and other intangibles on nonmarketable equity securities, net of applicable deferred taxes. The ratios are (i) tangible book value per common share, which represents tangible common equity divided by common shares outstanding; and (ii) return on average tangible common equity (ROTCE),

which represents our annualized earnings as a percentage of tangible common equity. The methodology of determining tangible common equity may differ among companies. Management believes that tangible book value per common share and return on average tangible common equity, which utilize tangible common equity, are useful financial measures because they enable management, investors, and others to assess the Company's use of equity.

Table 41 provides a reconciliation of these non-GAAP financial measures to GAAP financial measures.

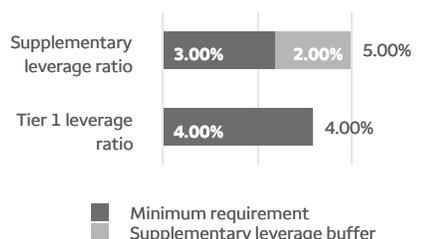

Table 41: Tangible Common Equity

(in millions, except ratios)	Balance at period end						Average balance	
	Quarter ended			Quarter ended			Six months ended	
	Jun 30, 2021	Mar 31, 2021	Jun 30, 2020	Jun 30, 2021	Mar 31, 2021	Jun 30, 2020	Jun 30, 2021	Jun 30, 2020
Total equity	\$ 193,127	188,034	178,635	190,968	189,074	184,072	190,026	185,982

Applicable deferred taxes related to goodwill and other intangible assets (1)	875	866	831	873	863	828	868	823
Tangible common equity (B)	\$ 143,577	138,702	129,842	141,702	139,072	135,485	140,395	136,964
Common shares outstanding (C)	4,108.0	4,141.1	4,119.6	N/A	N/A	N/A	N/A	N/A
Net income applicable to common stock (D)	N/A	N/A	N/A	\$ 5,743	4,256	(4,160)	\$ 9,999	(3,856)
Book value per common share (A)/(C)	\$ 41.74	40.27	38.31	N/A	N/A	N/A	N/A	N/A
Tangible book value per common share (B)/(C)	34.95	33.49	31.52	N/A	N/A	N/A	N/A	N/A
Return on average common stockholders' equity (ROE) (annualized) (D)/(A)	N/A	N/A	N/A	13.59 %	10.33	(10.24)	11.98 %	(4.70)%
Return on average tangible common equity (ROTCE) (annualized) (D)/(B)	N/A	N/A	N/A	16.26	12.41	(12.35)	14.36 %	(5.66)%

(1) Determined by applying the combined federal statutory rate and composite state income tax rates to the difference between book and tax basis of the respective goodwill and intangible assets at period end.

LEVERAGE REQUIREMENTS As a BHC, we are required to maintain a supplementary leverage ratio (SLR) to avoid restrictions on capital distributions and discretionary bonus payments and maintain a minimum tier 1 leverage ratio. Table 42 presents the leverage requirements applicable to the Company as of June 30, 2021.

Table 42: Leverage Requirements Applicable to the Company

In addition, our IDIs are required to maintain an SLR of at least 6.00% to be considered well capitalized under applicable regulatory capital adequacy rules and maintain a minimum tier 1 leverage ratio of 4.00%.

The FRB and OCC have proposed amendments to the SLR rules. For information regarding the proposed amendments to the SLR rules, see the "Capital Management – Leverage Requirements" section in our 2020 Form 10-K.

At June 30, 2021, the Company's SLR was 7.09%, and each of our IDIs exceeded their applicable SLR requirements. Table 43 presents information regarding the calculation and components of the Company's SLR and tier 1 leverage ratio.

Capital Management (continued)

Table 43: Leverage Ratios for the Company

(in millions, except ratios)	Quarter ended June 30, 2021	
Tier 1 capital	(A)	\$ 162,999
Total average assets		1,940,757
Less: Goodwill and other permitted Tier 1 capital deductions (net of deferred tax liabilities)		29,103
Less: Other SLR exclusions		—
Total adjusted average assets		1,911,654
Plus adjustments for off-balance sheet exposures:		
Derivatives (1)		68,738
Repo-style transactions (2)		3,626
Other (3)		316,398
Total off-balance sheet exposures		388,762
Total leverage exposure	(B)	\$ 2,300,416
Supplementary leverage ratio	(A)/(B)	7.09%
Tier 1 leverage ratio (4)		8.53%

- (1) Adjustment represents derivatives and collateral netting exposures as defined for supplementary leverage ratio determination purposes.
(2) Adjustment represents counterparty credit risk for repo-style transactions where Wells Fargo & Company is the principal counterparty facing the client.
(3) Adjustment represents credit equivalent amounts of other off-balance sheet exposures not already included as derivatives and repo-style transactions exposures.
(4) The tier 1 leverage ratio consists of tier 1 capital divided by total average assets, excluding goodwill and certain other items as determined under the rule.

TOTAL LOSS ABSORBING CAPACITY As a G-SIB, we are required to have a minimum amount of equity and unsecured long-term debt for purposes of resolvability and resiliency, often referred to as Total Loss Absorbing Capacity (TLAC). U.S. G-SIBs are required to have a minimum amount of TLAC (consisting of CET1 capital and additional tier 1 capital issued directly by the top-tier or covered BHC plus eligible external long-term debt) to avoid restrictions on capital distributions and discretionary bonus payments, as well as a minimum amount of eligible unsecured long-term debt. The components used to calculate our minimum TLAC and eligible unsecured long-term debt requirements as of June 30, 2021, are presented in Table 44.

Table 44: Components Used to Calculate TLAC and Eligible Unsecured Long-Term Debt Requirements

TLAC requirement	
Greater of:	
18.00% of RWAs + TLAC buffer (equal to 2.50% of RWAs + method one G-SIB capital surcharge + any countercyclical buffer)	7.50% of total leverage exposure (the denominator of the SLR calculation) + External TLAC leverage buffer (equal to 2.00% of total leverage exposure)
Minimum amount of eligible unsecured long-term debt	
Greater of:	
6.00% of RWAs + Method two G-SIB capital surcharge	4.50% of total leverage exposure

The FRB and OCC have proposed amendments to the TLAC and eligible unsecured long-term debt requirements. For information regarding these proposed amendments, see the “Capital Management – Total Loss Absorbing Capacity” section in our 2020 Form 10-K.

Table 45 provides our TLAC and eligible unsecured long-term debt and related ratios as of June 30, 2021, and December 31, 2020.

Table 45: TLAC and Eligible Unsecured Long-Term Debt

(\$ in millions)	TLAC (1)	Regulatory Minimum (2)	Eligible Unsecured Long-term Debt	Regulatory Minimum
June 30, 2021				
Total eligible amount	\$298,496		129,411	
Percentage of RWAs (3)	25.11 %	21.50	10.89	8.00
Percentage of total leverage exposure	12.98	9.50	5.63	4.50
December 31, 2020				
Total eligible amount	\$307,226		140,703	
Percentage of RWAs (3)	25.74 %	22.00	11.79	8.00
Percentage of total leverage exposure (4)	15.64	9.50	7.16	4.50

- (1) TLAC ratios are calculated using the CECL transition provision issued by federal banking regulators.
(2) Represents the minimum required to avoid restrictions on capital distributions and discretionary bonus payments.
(3) Our minimum TLAC and eligible unsecured long-term debt requirements are calculated based on the greater of RWAs determined under the Standardized and Advanced Approaches.
(4) Total leverage exposure at December 31, 2020, reflected an interim final rule issued by the FRB that temporarily allowed a bank holding company to exclude on-balance sheet amounts of U.S. Treasury securities and deposits at Federal Reserve Banks from the calculation of its total leverage exposure.

OTHER REGULATORY CAPITAL AND LIQUIDITY MATTERS For information regarding the U.S. implementation of the Basel III LCR and NSFR, see the “Risk Management – Asset/ Liability Management – Liquidity Risk and Funding – Liquidity Standards” section in this Report.

Capital Planning and Stress Testing

Our planned long-term capital structure is designed to meet regulatory and market expectations. We believe that our long-term targeted capital structure enables us to invest in and grow our business, satisfy our customers’ financial needs in varying environments, access markets, and maintain flexibility to return capital to our shareholders. Our long-term targeted capital structure also considers capital levels sufficient to exceed capital requirements including the G-SIB capital surcharge. Accordingly, we currently target a long-term CET1 capital ratio that is 100 basis points above our regulatory requirement plus an incremental buffer of 25 to 50 basis points. Our capital targets are subject to change based on various factors, including changes to the regulatory capital framework and expectations for large banks promulgated by bank regulatory agencies, changes to the regulatory requirements for our capital ratios, planned capital actions, changes in our risk profile and other factors.

The FRB capital plan rule establishes capital planning and other requirements that govern capital distributions, including dividends and share repurchases, by certain BHCs, including Wells Fargo. The FRB assesses, among other things, the overall financial condition, risk profile, and capital adequacy of BHCs when evaluating their capital plans.

On March 25, 2021, the FRB announced that it was extending measures it previously announced limiting large BHCs, including Wells Fargo, from making any capital distribution (excluding any capital distribution arising from the issuance of a capital instrument eligible for inclusion in the numerator of a regulatory capital ratio), unless otherwise approved by the FRB. The FRB generally authorized BHCs to (i) provided that the BHC does not increase the amount of its common stock dividends to

be larger than the level paid in second quarter 2020, pay common stock dividends and make share repurchases that, in the aggregate, do not exceed an amount equal to the average of the BHC's net income for the four preceding calendar quarters; (ii) make share repurchases that equal the amount of share issuances related to expensed employee compensation; and (iii) redeem and make scheduled payments on additional tier 1 and tier 2 capital instruments. These limitations on capital distributions ended on June 30, 2021.

Concurrently with CCAR, federal banking regulators also require large BHCs and banks to conduct their own stress tests to evaluate whether the institution has sufficient capital to continue to operate during periods of adverse economic and financial conditions.

In June 2021, the Company completed the 2021 CCAR stress test process. On July 27, 2021, the Board approved an increase to the Company's third quarter 2021 common stock dividend to \$0.20 per share. Additionally, our capital plan includes gross common share repurchases of approximately \$18 billion for the four-quarter period beginning third quarter 2021 through second quarter 2022.

Regulatory Matters

The U.S. financial services industry is subject to significant regulation and regulatory oversight initiatives. This regulation and oversight may continue to impact how U.S. financial services companies conduct business and may continue to result in increased regulatory compliance costs.

For a discussion of certain consent orders applicable to the Company, see the "Overview" section in this Report. The following supplements our discussion of the other significant regulations and regulatory oversight initiatives that have affected or may affect our business contained in the "Regulatory Matters" and "Risk Factors" sections in our 2020 Form 10-K.

"Living Will" Requirements and Related Matters

Rules adopted by the FRB and the FDIC under the Dodd-Frank Act require large financial institutions, including Wells Fargo, to prepare and periodically submit resolution plans, also known as "living wills," that would facilitate their rapid and orderly resolution in the event of material financial distress or failure. Under the rules, rapid and orderly resolution means a reorganization or liquidation of the covered company under the U.S. Bankruptcy Code that can be accomplished in a reasonable period of time and in a manner that substantially mitigates the risk that failure would have serious adverse effects on the financial stability of the United States. In addition to the Company's resolution plan, our national bank subsidiary, Wells Fargo Bank, N.A. (the "Bank"), is also required to prepare and periodically submit a resolution plan. If the FRB and/or FDIC determine that our resolution plan has deficiencies, they may impose more stringent capital, leverage or liquidity requirements on us or restrict our growth, activities or operations until we adequately remedy the deficiencies. If the FRB and/or FDIC ultimately determine that we have been unable to remedy any deficiencies, they could require us to divest certain assets or operations. On June 29, 2021, we submitted our most recent resolution plan to the FRB and FDIC.

If Wells Fargo were to fail, it may be resolved in a bankruptcy proceeding or, if certain conditions are met, under the resolution regime created by the Dodd-Frank Act known as the "orderly liquidation authority." The orderly liquidation authority allows for the appointment of the FDIC as receiver for a systemically

Securities Repurchases

From time to time the Board authorizes the Company to repurchase shares of our common stock. Although we announce when the Board authorizes share repurchases, we typically do not give any public notice before we repurchase our shares. Various factors determine the amount of our share repurchases, including our capital requirements, the number of shares we expect to issue for employee benefit plans and acquisitions, market conditions (including the trading price of our stock), and regulatory and legal considerations, including under the FRB's capital plan rule. Due to the various factors that may impact the amount of our share repurchases and the fact that we tend to be in the market regularly to satisfy repurchase considerations under our capital plan, our share repurchases occur at various price levels. We may suspend share repurchase activity at any time.

At June 30, 2021, we had remaining Board authority to repurchase approximately 615 million shares, subject to regulatory and legal conditions. For additional information about share repurchases during second quarter 2021, see Part II, Item 2 in this Report.

important financial institution that is in default or in danger of default if, among other things, the resolution of the institution under the U.S. Bankruptcy Code would have serious adverse effects on financial stability in the United States. If the FDIC is appointed as receiver for Wells Fargo & Company (the "Parent"), then the orderly liquidation authority, rather than the U.S. Bankruptcy Code, would determine the powers of the receiver and the rights and obligations of our security holders. The FDIC's orderly liquidation authority requires that security holders of a company in receivership bear all losses before U.S. taxpayers are exposed to any losses, and allows the FDIC to disregard the strict priority of creditor claims under the U.S. Bankruptcy Code in certain circumstances.

The strategy described in our most recent resolution plan is a single point of entry strategy, in which the Parent would likely be the only material legal entity to enter resolution proceedings. However, we are not obligated to maintain a single point of entry strategy, and the strategy described in our resolution plan is not binding in the event of an actual resolution of Wells Fargo, whether conducted under the U.S. Bankruptcy Code or by the FDIC under the orderly liquidation authority. The FDIC has announced that a single point of entry strategy may be a desirable strategy under its implementation of the orderly liquidation authority, but not all aspects of how the FDIC might exercise this authority are known and additional rulemaking is possible.

To facilitate the orderly resolution of systemically important financial institutions in case of material distress or failure, federal banking regulations require that institutions, such as Wells Fargo, maintain a minimum amount of equity and unsecured debt to absorb losses and recapitalize operating subsidiaries. Federal banking regulators have also required measures to facilitate the continued operation of operating subsidiaries notwithstanding the failure of their parent companies, such as limitations on parent guarantees, and have issued guidance encouraging institutions to take legally binding measures to provide capital and liquidity resources to certain subsidiaries to facilitate an orderly resolution. In response to the regulators' guidance and to facilitate the orderly resolution of the Company, on June 28, 2017, the Parent entered into a support agreement, as amended

Regulatory Matters (continued)

and restated on June 26, 2019 (the “Support Agreement”), with WFC Holdings, LLC, an intermediate holding company and subsidiary of the Parent (the “IHC”), the Bank, Wells Fargo Securities, LLC (“WFS”), Wells Fargo Clearing Services, LLC (“WFCS”), and certain other subsidiaries of the Parent designated from time to time as material entities for resolution planning purposes (the “Covered Entities”) or identified from time to time as related support entities in our resolution plan (the “Related Support Entities”). Pursuant to the Support Agreement, the Parent transferred a significant amount of its assets, including the majority of its cash, deposits, liquid securities and intercompany loans (but excluding its equity interests in its subsidiaries and certain other assets), to the IHC and will continue to transfer those types of assets to the IHC from time to time. In the event of our material financial distress or failure, the IHC will be obligated to use the transferred assets to provide capital and/or liquidity to the Bank, WFS, WFCS, and the Covered Entities pursuant to the Support Agreement. Under the Support Agreement, the IHC will also provide funding and liquidity to the Parent through subordinated notes and a committed line of credit, which, together with the issuance of dividends, is expected to provide the Parent, during business as usual operating conditions, with the same access to cash necessary to service its debts, pay dividends, repurchase its shares, and perform its other obligations as it would have had if it had not entered into these arrangements and transferred any assets. If certain liquidity and/or capital metrics fall below defined triggers, or if the Parent’s board of directors authorizes it to file a case under the U.S. Bankruptcy Code, the subordinated notes would be forgiven, the committed line of credit would terminate, and the IHC’s ability to pay dividends to the Parent would be restricted, any of which could materially and adversely impact the Parent’s liquidity and its ability to satisfy its debts and other obligations, and could result in the commencement of bankruptcy proceedings by the Parent at an earlier time than might have otherwise occurred if the Support Agreement were not implemented. The respective obligations under the Support Agreement of the Parent, the IHC, the Bank, and the Related Support Entities are secured pursuant to a related security agreement.

In addition to our resolution plans, we must also prepare and submit to the FRB a recovery plan that identifies a range of options that we may consider during times of idiosyncratic or systemic economic stress to remedy any financial weaknesses and restore market confidence without extraordinary government support. Recovery options include the possible sale, transfer or disposal of assets, securities, loan portfolios or businesses. The Bank must also prepare and submit to the OCC a recovery plan that sets forth the Bank’s plan to remain a going concern when the Bank is experiencing considerable financial or operational stress, but has not yet deteriorated to the point where liquidation or resolution is imminent. If either the FRB or the OCC determines that our recovery plan is deficient, they may impose fines, restrictions on our business or ultimately require us to divest assets.

Critical Accounting Policies

Our significant accounting policies (see Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K) are fundamental to understanding our results of operations and financial condition because they require that we use estimates and assumptions that may affect the value of our assets or liabilities and financial results. Six of these policies are critical because they require management to make difficult, subjective and complex judgments about matters that are inherently uncertain and because it is likely that materially different amounts would be reported under different conditions or using different assumptions. These policies govern:

- the allowance for credit losses;
- the valuation of residential MSRs;
- the fair value of financial instruments;
- income taxes;
- liability for contingent litigation losses; and
- goodwill impairment.

Management has discussed these critical accounting policies and the related estimates and judgments with the Board's Audit Committee. For additional information on these policies, see the "Critical Accounting Policies" section and Note 1 (Summary of Significant Accounting Policies) to Financial Statements in our 2020 Form 10-K.

Current Accounting Developments

The following significant accounting update has been issued by the Financial Accounting Standards Board (FASB) and is applicable to us, but is not yet effective:

- Accounting Standards Update (ASU or Update) 2018-12 – Financial Services – Insurance (Topic 944): *Targeted Improvements to the Accounting for Long-Duration Contracts* and subsequent related updates

ASU 2018-12 See the "Current Accounting Developments" section in our 2020 Form 10-K for information on the effective date and our assessment of the expected financial statement impact upon adoption.

Other Accounting Developments

The following Updates are applicable to us but are not expected to have a material impact on our consolidated financial statements:

- ASU 2020-06 – Debt – Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging – Contracts in Entity's Own Equity (Subtopic 815-40): *Accounting for Convertible Instruments and Contracts in an Entity's Own Equity*
- ASU 2021-05 – Leases (Topic 842): *Lessors – Certain Leases with Variable Lease Payments*

Forward-Looking Statements

This document contains forward-looking statements. In addition, we may make forward-looking statements in our other documents filed or furnished with the Securities and Exchange Commission, and our management may make forward-looking statements orally to analysts, investors, representatives of the media and others. Forward-looking statements can be identified by words such as “anticipates,” “intends,” “plans,” “seeks,” “believes,” “estimates,” “expects,” “target,” “projects,” “outlook,” “forecast,” “will,” “may,” “could,” “should,” “can” and similar references to future periods. In particular, forward-looking statements include, but are not limited to, statements we make about: (i) the future operating or financial performance of the Company, including our outlook for future growth; (ii) our noninterest expense and efficiency ratio; (iii) future credit quality and performance, including our expectations regarding future loan losses, our allowance for credit losses, and the economic scenarios considered to develop the allowance; (iv) our expectations regarding net interest income and net interest margin; (v) loan growth or the reduction or mitigation of risk in our loan portfolios; (vi) future capital or liquidity levels, ratios or targets; (vii) the performance of our mortgage business and any related exposures; (viii) the expected outcome and impact of legal, regulatory and legislative developments, as well as our expectations regarding compliance therewith; (ix) future common stock dividends, common share repurchases and other uses of capital; (x) our targeted range for return on assets, return on equity, and return on tangible common equity; (xi) expectations regarding our effective income tax rate; (xii) the outcome of contingencies, such as legal proceedings; (xiii) environmental, social and governance related goals or commitments; and (xiv) the Company’s plans, objectives and strategies.

Forward-looking statements are not based on historical facts but instead represent our current expectations and assumptions regarding our business, the economy and other future conditions. Because forward-looking statements relate to the future, they are subject to inherent uncertainties, risks and changes in circumstances that are difficult to predict. Our actual results may differ materially from those contemplated by the forward-looking statements. We caution you, therefore, against relying on any of these forward-looking statements. They are neither statements of historical fact nor guarantees or assurances of future performance. While there is no assurance that any list of risks and uncertainties or risk factors is complete, important factors that could cause actual results to differ materially from those in the forward-looking statements include the following, without limitation:

- current and future economic and market conditions, including the effects of declines in housing prices, high unemployment rates, U.S. fiscal debt, budget and tax matters, geopolitical matters, and any slowdown in global economic growth;
 - the effect of the COVID-19 pandemic, including on our credit quality and business operations, as well as its impact on general economic and financial market conditions;
 - our capital and liquidity requirements (including under regulatory capital standards, such as the Basel III capital standards) and our ability to generate capital internally or raise capital on favorable terms;
 - current, pending or future legislation or regulation that could have a negative effect on our revenue and businesses,
- including rules and regulations relating to bank products and financial services;
 - developments in our mortgage banking business, including the extent of the success of our mortgage loan modification efforts, the amount of mortgage loan repurchase demands that we receive, any negative effects relating to our mortgage servicing, loan modification or foreclosure practices, and the effects of regulatory or judicial requirements or guidance impacting our mortgage banking business and any changes in industry standards;
 - our ability to realize any efficiency ratio or expense target as part of our expense management initiatives, including as a result of business and economic cyclicality, seasonality, changes in our business composition and operating environment, growth in our businesses and/or acquisitions, and unexpected expenses relating to, among other things, litigation and regulatory matters;
 - the effect of the current interest rate environment or changes in interest rates or in the level or composition of our assets or liabilities on our net interest income, net interest margin and our mortgage originations, mortgage servicing rights and mortgage loans held for sale;
 - significant turbulence or a disruption in the capital or financial markets, which could result in, among other things, reduced investor demand for mortgage loans, a reduction in the availability of funding or increased funding costs, and declines in asset values and/or recognition of impairments of securities held in our debt securities and equity securities portfolios;
 - the effect of a fall in stock market prices on our investment banking business and our fee income from our brokerage and wealth management businesses;
 - negative effects from the retail banking sales practices matter and from other instances where customers may have experienced financial harm, including on our legal, operational and compliance costs, our ability to engage in certain business activities or offer certain products or services, our ability to keep and attract customers, our ability to attract and retain qualified employees, and our reputation;
 - resolution of regulatory matters, litigation, or other legal actions, which may result in, among other things, additional costs, fines, penalties, restrictions on our business activities, reputational harm, or other adverse consequences;
 - a failure in or breach of our operational or security systems or infrastructure, or those of our third-party vendors or other service providers, including as a result of cyber attacks;
 - the effect of changes in the level of checking or savings account deposits on our funding costs and net interest margin;
 - fiscal and monetary policies of the Federal Reserve Board;
 - changes to U.S. tax guidance and regulations, as well as the effect of discrete items on our effective income tax rate;
 - our ability to develop and execute effective business plans and strategies; and
 - the other risk factors and uncertainties described under “Risk Factors” in our Annual Report on Form 10-K for the year ended December 31, 2020.

In addition to the above factors, we also caution that the amount and timing of any future common stock dividends or repurchases will depend on the earnings, cash requirements and

financial condition of the Company, market conditions, capital requirements (including under Basel capital standards), common stock issuance requirements, applicable law and regulations (including federal securities laws and federal banking regulations), and other factors deemed relevant by the Company's Board of Directors, and may be subject to regulatory approval or conditions.

For additional information about factors that could cause actual results to differ materially from our expectations, refer to our reports filed with the Securities and Exchange Commission, including the discussion under "Risk Factors" in our Annual Report on Form 10-K for the year ended December 31, 2020, as filed with the Securities and Exchange Commission and available on its website at www.sec.gov.¹

Any forward-looking statement made by us speaks only as of the date on which it is made. Factors or events that could cause our actual results to differ may emerge from time to time, and it is not possible for us to predict all of them. We undertake no obligation to publicly update any forward-looking statement, whether as a result of new information, future developments or otherwise, except as may be required by law.

Forward-looking Non-GAAP Financial Measures. From time to time management may discuss forward-looking non-GAAP financial measures, such as forward-looking estimates or targets for return on average tangible common equity. We are unable to provide a reconciliation of forward-looking non-GAAP financial measures to their most directly comparable GAAP financial measures because we are unable to provide, without unreasonable effort, a meaningful or accurate calculation or estimation of amounts that would be necessary for the reconciliation due to the complexity and inherent difficulty in forecasting and quantifying future amounts or when they may occur. Such unavailable information could be significant to future results.

Risk Factors

An investment in the Company involves risk, including the possibility that the value of the investment could fall substantially and that dividends or other distributions on the investment could be reduced or eliminated. For a discussion of risk factors that could adversely affect our financial results and condition, and the value of, and return on, an investment in the Company, we refer you to the “Risk Factors” section in our 2020 Form 10-K.

Controls and Procedures

Disclosure Controls and Procedures

The Company's management evaluated the effectiveness, as of June 30, 2021, of the Company's disclosure controls and procedures. The Company's chief executive officer and chief financial officer participated in the evaluation. Based on this evaluation, the Company's chief executive officer and chief financial officer concluded that the Company's disclosure controls and procedures were effective as of June 30, 2021.

Internal Control Over Financial Reporting

Internal control over financial reporting is defined in Rule 13a-15(f) promulgated under the Securities Exchange Act of 1934 as a process designed by, or under the supervision of, the Company's principal executive and principal financial officers and effected by the Company's Board, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. generally accepted accounting principles (GAAP) and includes those policies and procedures that:

- pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of assets of the Company;
- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with GAAP, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. No change occurred during second quarter 2021 that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting.

- (1) In second quarter 2021, we elected to change our accounting method for low-income housing tax credit investments and elected to change the presentation of investment tax credits related to solar energy investments. Prior period balances have been revised to conform with the current period presentation. For additional information, see Note 1 (Summary of Significant Accounting Policies).
- (2) Prior period balances have been revised to conform with the current period presentation.

The accompanying notes are an integral part of these statements. See Note 1 (Summary of Significant Accounting Policies) for noncash activities.

Notes to Financial Statements

-See the Glossary of Acronyms at the end of this Report for terms used throughout the Financial Statements and related Notes.

Note 1: Summary of Significant Accounting Policies

Wells Fargo & Company is a diversified financial services company. We provide banking, investment and mortgage products and services, as well as consumer and commercial finance, through banking locations and offices, the internet and other distribution channels to individuals, businesses and institutions in all 50 states, the District of Columbia, and in countries outside the U.S. When we refer to “Wells Fargo,” “the Company,” “we,” “our” or “us,” we mean Wells Fargo & Company and Subsidiaries (consolidated). Wells Fargo & Company (the Parent) is a financial holding company and a bank holding company. We also hold a majority interest in a real estate investment trust, which has publicly traded preferred stock outstanding.

Our accounting and reporting policies conform with U.S. generally accepted accounting principles (GAAP) and practices in the financial services industry. For discussion of our significant accounting policies, see Note 1 (Summary of Significant Accounting Policies) in our Annual Report on Form 10-K for the year ended December 31, 2020 (2020 Form 10-K).

To prepare the financial statements in conformity with GAAP, management must make estimates based on assumptions about future economic and market conditions (for example, unemployment, market liquidity, real estate prices, etc.) that affect the reported amounts of assets and liabilities at the date of the financial statements, income and expenses during the reporting period and the related disclosures. Although our estimates contemplate current conditions and how we expect them to change in the future, it is reasonably possible that actual conditions could be worse than anticipated in those estimates, which could materially affect our results of operations and financial condition. Management has made significant estimates in several areas, including:

- allowance for credit losses (Note 4 (Loans and Related Allowance for Credit Losses));
- valuations of residential mortgage servicing rights (MSRs) (Note 8 (Securitizations and Variable Interest Entities) and Note 9 (Mortgage Banking Activities));
- valuations of financial instruments (Note 15 (Fair Values of Assets and Liabilities));
- liabilities for contingent litigation losses (Note 13 (Legal Actions));
- income taxes; and
- goodwill impairment (Note 10 (Intangible Assets)).

Actual results could differ from those estimates.

These unaudited interim financial statements reflect all adjustments that are, in the opinion of management, necessary for a fair statement of the results for the periods presented. These adjustments are of a normal recurring nature, unless otherwise disclosed in this Form 10-Q. The results of operations in the interim financial statements do not necessarily indicate the results that may be expected for the full year. The interim financial information should be read in conjunction with our 2020 Form 10-K.

Change in Accounting Policies

In second quarter 2021, we elected to change our accounting method for low-income housing tax credit (LIHTC) investments from the equity method of accounting to the proportional amortization method. Under the proportional amortization method, the investments are carried at amortized cost and amortized in proportion to the tax credits received. The amortization of the investments and the related tax impacts are recognized in income tax expense. Previously, we recognized the amortization of the investments in other noninterest income and the related tax impacts were recognized in income tax expense. We determined that the proportional amortization method is preferable because it better aligns the financial statement presentation with the economic impact of these investments, which generate tax credits over the lives of the investments. Adoption of the proportional amortization method was applied retrospectively, to the earliest period presented, which resulted in a cumulative-effect adjustment to reduce retained earnings by \$283 million as of January 1, 2020.

In second quarter 2021, we also elected to change the presentation of investment tax credits related to solar energy investments, which are accounted for under the deferral method. We reclassified the investment tax credits on our consolidated balance sheet from accrued expenses and other liabilities to a reduction of the carrying value of the investment balances. We also reclassified the investment tax credits, which are recognized over time, from income tax expense to interest income for solar energy leases or noninterest income for solar energy equity investments. We determined that this presentation is preferable because it better reflects the financial statement presentation of the investment tax credits as an integral component of the investments. The change in accounting policy was adopted retrospectively to January 1, 2020.

Table 1.1 presents the impact of the accounting policy changes for LIHTC investments and solar energy investments to our consolidated statement of income and consolidated balance sheet. There was no material impact to the consolidated statement of cash flows.

Table 1.1: Impact of the Accounting Policy Changes for LIHTC Investments and Solar Energy Investments

(\$ in millions, except per share amounts)	Quarter ended June 30, 2020				Six months ended June 30, 2020

At December 31, 2020								
Effect of accounting policy changes (\$)								
As reported LIHTC Solar As revised								
Selected Balance Sheet Data								
Equity securities	\$ 62,260	(275)	(1,977)	60,008				
Accrued expenses and other liabilities	76,404	(62)	(1,982)	74,360				
Retained earnings	162,890	(207)	—	162,683				

(1) The quarterly income tax expense (benefit) varies based on the income (loss) before income tax expense (benefit) and the estimated annual effective income tax rate applied to each quarter.

Accounting Standards Adopted in 2021

In 2021, we adopted the following new accounting guidance:

- Accounting Standards Update (ASU or Update) 2021-01 – Reference Rate Reform (Topic 848): *Scope*
- ASU 2020-08 – Codification Improvements to Subtopic 310-20, *Receivables – Nonrefundable Fees and Other Costs*
- ASU 2020-01 – Investments – Equity Securities (Topic 321), Investments – Equity Method and Joint Ventures (Topic 323), and Derivatives and Hedging (Topic 815): *Clarifying the Interactions between Topic 321, Topic 323, and Topic 815 (a consensus of the Financial Accounting Standards Board (FASB) Emerging Issues Task Force)*
- ASU 2019-12 – Income Taxes (Topic 740): *Simplifying the Accounting for Income Taxes*

ASU 2021-01 clarifies the scope of Topic 848 to include derivatives affected by changes in interest rates for margining, discounting, or contract price alignment as part of the market-wide transition to new reference rates (commonly referred to as the “discounting transition”), even if they do not reference the London Interbank Offered Rate or another rate that is expected to be discontinued as a result of reference rate reform. The Update also clarifies other aspects of the relief provided in Accounting Standards Codification (ASC) 848. We adopted this Update in first quarter 2021 on a prospective basis, and the guidance will be followed until the Update terminates on December 31, 2022. The Update did not have a material impact on our consolidated financial statements.

ASU 2020-08 clarifies the accounting for purchased callable debt securities carried at a premium and was issued to correct an unintended application of ASU 2017-08 – Receivables—Nonrefundable Fees and Other Costs (Subtopic 310-20): *Premium Amortization on Purchased Callable Debt Securities*, which requires amortization of such premiums to the earliest call date, but was not clear for the method to be used for instruments with multiple call dates. The Update now specifies that such premiums are amortized to the next call date and requires reassessment throughout the life of the instruments with multiple call dates. We adopted this Update in first quarter

2021. The Update did not have a material impact on our consolidated financial statements.

ASU 2020-01 clarifies the accounting for equity securities upon transition between the measurement alternative and equity method. The Update also clarifies for forward contracts and options to purchase equity securities an entity need not consider whether upon settlement of the forward contract or option if the equity securities would be accounted for by the equity method or the fair value option. We adopted this Update in first quarter 2021. The Update did not have a material impact on our consolidated financial statements.

ASU 2019-12 provides narrow scope simplifications and improvements to the general principles in ASC Topic 740 – Income Taxes related to intraperiod tax allocation, basis differences when there are changes in ownership of foreign investments and interim periods income tax accounting for year to date losses that exceed anticipated annual losses. We adopted this Update in first quarter 2021. The Update did not have a material impact on our consolidated financial statements.

Note 1: Summary of Significant Accounting Policies (continued)

Supplemental Cash Flow Information

Significant noncash activities are presented in Table 1.2.

Table 1.2: Supplemental Cash Flow Information

(in millions)	Six months ended June 30,	
	2021	2020
Held-to-maturity debt securities purchased from securitization of LHFS (1)	16,462	664
Transfers from loans to LHFS (2)	11,551	12,753
Transfers from available-for-sale debt securities to held-to-maturity debt securities	41,298	—

(1) For the six months ended June 30, 2021, predominantly represents agency mortgage-backed securities purchased upon settlement of the sale and securitization of our conforming residential mortgage loans. See Note 8 (Securitizations and Variable Interest Entities) for additional information.

(2) Prior periods have been revised to conform to the current period presentation.

Subsequent Events

We have evaluated the effects of events that have occurred subsequent to June 30, 2021, and, except as disclosed in Note 16 (Preferred Stock), there have been no material events that would require recognition in our second quarter 2021 consolidated financial statements or disclosure in the Notes to the consolidated financial statements.

Note 2: Trading Activities

Table 2.1 presents a summary of our trading assets and liabilities measured at fair value through earnings.

Table 2.1: Trading Assets and Liabilities

(in millions)	Jun 30, 2021	Dec 31, 2020
Trading assets:		
Debt securities	\$ 82,727	75,095
Equity securities	23,701	23,032
Loans held for sale	2,269	1,015
Gross trading derivative assets	54,965	58,767
Netting (1)	(31,052)	(34,301)
Total trading derivative assets	23,913	24,466
Total trading assets	132,610	123,608
Trading liabilities:		
Short sale	22,043	22,441
Gross trading derivative liabilities	45,441	53,285
Netting (1)	(33,614)	(39,444)
Total trading derivative liabilities	11,827	13,841
Total trading liabilities	\$ 33,870	36,282

(1) Represents balance sheet netting for trading derivative asset and liability balances, and trading portfolio level counterparty valuation adjustments.

Table 2.2 provides a summary of the net interest income earned from trading securities, and net gains and losses due to the realized and unrealized gains and losses from trading activities.

Net interest income also includes dividend income on trading securities and dividend expense on trading securities we have sold, but not yet purchased.

Table 2.2: Net Interest Income and Net Gains (Losses) on Trading Activities

(in millions)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Interest income:				
Debt securities	\$ 496	\$ 659	\$ 1,025	1,425
Equity securities	93	68	196	205
Loans held for sale	3	6	15	18
Total interest income	592	733	1,236	1,648
Less: Interest expense	105	116	215	257
Net interest income	487	617	1,021	1,391
Net gains (losses) from trading activities (1):				
Debt securities	769	329	(1,337)	2,684
Equity securities	856	2,329	2,009	(2,072)
Loans held for sale	15	24	39	12
Derivatives (2)	(1,619)	(1,875)	(342)	247
Total net gains from trading activities	21	807	369	871
Total trading-related net interest and noninterest income	\$ 508	\$ 1,424	\$ 1,390	2,262

(1) Represents realized gains (losses) from our trading activities and unrealized gains (losses) due to changes in fair value of our trading positions.

(2) Excludes economic hedging of mortgage banking and asset/liability management activities, for which hedge results (realized and unrealized) are reported with the respective hedged activities.

Note 3: Available-for-Sale and Held-to-Maturity Debt Securities

Table 3.1 provides the amortized cost, net of the allowance for credit losses (ACL) for debt securities, and fair value by major categories of available-for-sale (AFS) debt securities, which are carried at fair value, and held-to-maturity (HTM) debt securities, which are carried at amortized cost, net of the ACL. The net unrealized gains (losses) for AFS debt securities are reported as a component of cumulative other comprehensive income (OCI), net of the ACL and applicable income taxes. Information on debt securities held for trading is included in Note 2 (Trading Activities).

Outstanding balances exclude accrued interest receivable on AFS and HTM debt securities, which are included in other assets. See Note 7 (Other Assets) for additional information on accrued interest receivable. Amounts considered to be uncollectible are reversed through interest income. The interest income reversed in the second quarter and first half of both 2021 and 2020 was insignificant.

Table 3.1: Available-for-Sale and Held-to-Maturity Debt Securities Outstanding

(in millions)	Amortized cost, net (1)	Gross unrealized gains	Gross unrealized losses	Fair value
June 30, 2021				
Available-for-sale debt securities:				
Securities of U.S. Treasury and federal agencies	\$ 35,741	195	(31)	35,905
Non-U.S. government securities	11,201	—	—	11,201

- Represents amortized cost of the securities, net of the ACL of \$33 million and \$28 million related to AFS debt securities and \$77 million and \$41 million related to HTM debt securities at June 30, 2021, and December 31, 2020, respectively.
- Includes investments in tax-exempt preferred debt securities issued by investment funds or trusts that predominantly invest in tax-exempt municipal securities. The amortized cost, net of the ACL and fair value of these types of securities, was \$5.2 billion at June 30, 2021, and \$5.0 billion at December 31, 2020.
- Predominantly consists of commercial mortgage-backed securities at both June 30, 2021, and December 31, 2020.
- We held AFS and HTM debt securities from Federal National Mortgage Association (FNMA) and Federal Home Loan Mortgage Corporation (FHLMC) that each exceeded 10% of stockholders' equity, with an amortized cost of \$119.8 billion and \$89.9 billion and a fair value of \$121.5 billion and \$91.3 billion at June 30, 2021, and an amortized cost of \$99.8 billion and \$88.7 billion and a fair value of \$103.2 billion and \$91.5 billion at December 31, 2020, respectively.

Table 3.2 details the breakout of purchases of and transfers to HTM debt securities by major category of security.

Table 3.2: Held-to-Maturity Debt Securities Purchases and Transfers

(1) Excludes interest income from trading debt securities, which is disclosed in Note 2 (Trading Activities).

(2) Realized gains and losses relate to AFS debt securities. There were no realized gains or losses from HTM debt securities in all periods presented.

Credit Quality

We monitor credit quality of debt securities by evaluating various attributes and utilize such information in our evaluation of the appropriateness of the ACL for debt securities. The credit quality indicators that we most closely monitor include credit ratings and delinquency status and are based on information as of our financial statement date.

CREDIT RATINGS Credit ratings express opinions about the credit quality of a debt security. We determine the credit rating of a security according to the lowest credit rating made available by national recognized statistical rating organizations (NRSROs). Debt securities rated investment grade, that is those with ratings similar to BBB-/Baa3 or above, as defined by NRSROs, are generally considered by the rating agencies and market participants to be low credit risk. Conversely, debt securities rated below investment grade, labeled as “speculative grade” by the rating agencies, are considered to be distinctively higher

credit risk than investment grade debt securities. For debt securities not rated by NRSROs, we determine an internal credit grade of the debt securities (used for credit risk management purposes) equivalent to the credit ratings assigned by major credit agencies. Substantially all of our debt securities were rated by NRSROs at June 30, 2021, and December 31, 2020.

Table 3.4 shows the percentage of fair value of AFS debt securities and amortized cost of HTM debt securities determined to be rated investment grade, inclusive of securities rated based on internal credit grades.

Note 3: Available-for-Sale and Held-to-Maturity Debt Securities (continued)**Table 3.4: Investment Grade Debt Securities**

(\$ in millions)	Available-for-Sale		Held-to-Maturity

Securities of U.S. Treasury and federal agencies (2)	\$ 161,229	100%	162,732	100%
Securities of U.S. states and political subdivisions	19,406	99	25,870	100
Collateralized loan obligations (3)	9,018	100	16,255	100
All other debt securities (4)	30,739	93	904	6

(1) 94% and 92% were rated AA- and above at June 30, 2021, and December 31, 2020, respectively.

(2) Includes federal agency mortgage-backed securities.

(3) 99% and 98% were rated AA- and above at June 30, 2021, and December 31, 2020, respectively.

(4) Includes non-U.S. government, non-agency mortgage-backed, and all other debt securities.

DELINQUENCY STATUS AND NONACCRUAL DEBT SECURITIES Debt security issuers that are delinquent in payment of amounts due under contractual debt agreements have a higher probability of recognition of credit losses. As such, as part of our monitoring of the credit quality of the debt security portfolio, we consider whether debt securities we own are past due in payment of principal or interest payments and whether any securities have been placed into nonaccrual status.

Debt securities that are past due and still accruing were insignificant at both June 30, 2021, and December 31, 2020. The carrying value of debt securities in nonaccrual status was insignificant at both June 30, 2021, and December 31, 2020. Charge-offs on debt securities were insignificant in the second quarter and first half of both 2021 and 2020.

Purchased debt securities with credit deterioration (PCD) are not considered to be in nonaccrual status, as payments from issuers of these securities remain current. PCD securities were insignificant in the second quarter and first half of both 2021 and 2020.

Unrealized Losses of Available-for-Sale Debt Securities

Table 3.5 shows the gross unrealized losses and fair value of AFS debt securities by length of time those individual securities in each category have been in a continuous loss position. Debt securities on which we have recorded credit impairment are

categorized as being “less than 12 months” or “12 months or more” in a continuous loss position based on the point in time that the fair value declined to below the amortized cost basis, net of allowance for credit losses.

Table 3.5: Gross Unrealized Losses and Fair Value – Available-for-Sale Debt Securities

We have assessed each debt security with gross unrealized losses included in the previous table for credit impairment. As part of that assessment we evaluated and concluded that we do not intend to sell any of the debt securities, and that it is more likely than not that we will not be required to sell, prior to recovery of the amortized cost basis. We evaluate, where necessary, whether credit impairment exists by comparing the present value of the expected cash flows to the debt securities' amortized cost basis. Credit impairment is recorded as an ACL for debt securities.

For descriptions of the factors we consider when analyzing debt securities for impairment as well as methodology and significant inputs used to measure credit losses, see Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K.

Note 3: Available-for-Sale and Held-to-Maturity Debt Securities (continued)

Contractual Maturities

Table 3.6 and Table 3.7 show the remaining contractual maturities, amortized cost, net of the ACL, fair value and weighted average effective yields of AFS and HTM debt securities, respectively. The remaining contractual principal

maturities for mortgage-backed securities (MBS) do not consider prepayments. Remaining expected maturities will differ from contractual maturities because borrowers may have the right to prepay obligations before the underlying mortgages mature.

Note 4: Loans and Related Allowance for Credit Losses

Table 4.1 presents total loans outstanding by portfolio segment and class of financing receivable. Outstanding balances include unearned income, net deferred loan fees or costs, and unamortized discounts and premiums. These amounts were less than 1% of our total loans outstanding at June 30, 2021, and December 31, 2020.

Outstanding balances exclude accrued interest receivable on loans, except for certain revolving loans, such as credit card loans.

See Note 7 (Other Assets) for additional information on accrued interest receivable. Amounts considered to be uncollectible are reversed through interest income. During the first half of 2021, we reversed accrued interest receivable of \$24 million for our commercial portfolio segment and \$104 million for our consumer portfolio segment, compared with \$21 million and \$114 million, respectively, for the same period a year ago.

Table 4.1: Loans Outstanding

(in millions)	Jun 30, 2021	Dec 31, 2020
Commercial:		
Commercial and industrial	\$ 317,618	318,805

Commitments to Lend

A commitment to lend is a legally binding agreement to lend to a customer, usually at a stated interest rate, if funded, and for specific purposes and time periods. We generally require a fee to extend such commitments. Certain commitments are subject to loan agreements with covenants regarding the financial performance of the customer or borrowing base formulas on an ongoing basis that must be met before we are required to fund the commitment. We may reduce or cancel consumer commitments, including home equity lines and credit card lines, in accordance with the contracts and applicable law. For unconditionally cancelable commitments at our discretion, we do not recognize an ACL.

We may, as a representative for other lenders, advance funds or provide for the issuance of letters of credit under syndicated loan or letter of credit agreements. Any advances are generally repaid in less than a week and would normally require default of both the customer and another lender to expose us to loss. The unfunded amount of these temporary advance arrangements totaled approximately \$82.6 billion at June 30, 2021.

We issue commercial letters of credit to assist customers in purchasing goods or services, typically for international trade. At June 30, 2021, and December 31, 2020, we had \$1.4 billion and \$1.3 billion, respectively, of outstanding issued commercial letters of credit. We also originate multipurpose lending commitments under which borrowers have the option to draw on the facility for different purposes in one of several forms, including a standby letter of credit. See Note 11 (Guarantees and Other Commitments) for additional information on standby letters of credit.

When we enter into commitments, we are exposed to credit risk. The maximum credit risk for these commitments will generally be lower than the contractual amount because a significant portion of these commitments are not funded. We manage the potential risk in commitments to lend by limiting the total amount of commitments, both by individual customer and in total, by monitoring the size and maturity structure of these commitments and by applying the same credit standards for these commitments as for all of our credit activities.

For loans and commitments to lend, we generally require collateral or a guarantee. We may require various types of collateral, including commercial and consumer real estate, autos, other short-term liquid assets such as accounts receivable or inventory and long-lived assets, such as equipment and other business assets. Collateral requirements for each loan or commitment may vary based on the loan product and our assessment of a customer's credit risk according to the specific credit underwriting, including credit terms and structure.

The contractual amount of our unfunded credit commitments, including unissued standby and commercial letters of credit, is summarized by portfolio segment and class of financing receivable in Table 4.4. The table excludes the issued standby and commercial letters of credit and temporary advance arrangements described above.

Table 4.4: Unfunded Credit Commitments

(in millions)	Jun 30, 2021	Dec 31, 2020

Note 4: Loans and Related Allowance for Credit Losses (continued)

Allowance for Credit Losses

Table 4.5 presents the allowance for credit losses (ACL) for loans, which consists of the allowance for loan losses and the allowance

for unfunded credit commitments. The ACL for loans decreased \$3.3 billion from December 31, 2020, due to improvements in current and forecasted economic conditions.

Table 4.5: Allowance for Credit Losses for Loans

Allowance for loan losses as a percentage of total loans	1.78	2.02	1.78	2.02
Allowance for credit losses for loans as a percentage of total loans	1.92	2.19	1.92	2.19

(1) Represents the overall decrease in our ACL for loans as a result of our adoption of CECL on January 1, 2020.

(2) Represents the allowance estimated for purchased credit-impaired (PCI) loans that automatically became PCD loans with the adoption of CECL. For additional information, see Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K.

(3) Loans with an allowance measured by discounting expected cash flows using the loan's effective interest rate over the remaining life of the loan recognize changes in allowance attributable to the passage of time as interest income.

Table 4.6 summarizes the activity in the ACL by our commercial and consumer portfolio segments.

(3) Loans with an allowance measured by discounting expected cash flows using the loan's effective interest rate over the remaining life of the loan recognize changes in allowance attributable to the passage of time as interest income.

Note 4: Loans and Related Allowance for Credit Losses (continued)

Credit Quality

We monitor credit quality by evaluating various attributes and utilize such information in our evaluation of the appropriateness of the ACL for loans. The following sections provide the credit quality indicators we most closely monitor. The credit quality indicators are generally based on information as of our financial statement date, with the exception of updated Fair Isaac Corporation (FICO) scores and updated loan-to-value (LTV)/combined LTV (CLTV). We obtain FICO scores at loan origination and the scores are generally updated at least quarterly, except in limited circumstances, including compliance with the Fair Credit Reporting Act (FCRA). Generally, the LTV and CLTV indicators are updated in the second month of each quarter, with updates no older than March 31, 2021.

COMMERCIAL CREDIT QUALITY INDICATORS We manage a consistent process for assessing commercial loan credit quality.

Commercial loans are generally subject to individual risk assessment using our internal borrower and collateral quality ratings, which is our primary credit quality indicator. Our ratings are aligned to regulatory definitions of pass and criticized categories with the criticized segmented among special mention, substandard, doubtful and loss categories.

Table 4.7 provides the outstanding balances of our commercial loan portfolio by risk category. Credit quality information is provided with the year of origination for term loans. Revolving loans may convert to term loans as a result of a contractual provision in the original loan agreement or if modified in a troubled debt restructuring (TDR). At June 30, 2021, we had \$442.6 billion and \$33.8 billion of pass and criticized commercial loans, respectively.

Table 4.8 provides past due information for commercial loans, which we monitor as part of our credit risk management practices; however, delinquency is not a primary credit quality indicator for commercial loans. Payment deferral activities

instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies for customers who otherwise would have moved into past due status.

CONSUMER CREDIT QUALITY INDICATORS We have various classes of consumer loans that present unique credit risks. Loan delinquency, FICO credit scores and LTV for residential mortgage loans are the primary credit quality indicators that we monitor and utilize in our evaluation of the appropriateness of the ACL for the consumer loan portfolio segment.

Many of our loss estimation techniques used for the ACL for loans rely on delinquency-based models; therefore, delinquency is an important indicator of credit quality in the establishment of our ACL for consumer loans.

Table 4.9 provides the outstanding balances of our consumer loan portfolio by delinquency status. Payment deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies for customers who otherwise would have moved into past due status.

Credit quality information is provided with the year of origination for term loans. Revolving loans may convert to term loans as a result of a contractual provision in the original loan agreement or if modified in a TDR. The revolving loans converted to term loans in the credit card loan category represent credit card loans with modified terms that require payment over a specific term.

(1) Represents loans whose repayments are predominantly insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA). Loans insured/guaranteed by the FHA/VA and 90+ DPD totaled \$6.1 billion and \$11.1 billion at June 30, 2021, and December 31, 2020, respectively.

Of the \$2.9 billion of consumer loans not government insured/guaranteed that are 90 days or more past due at June 30, 2021, \$460 million was accruing, compared with

\$2.7 billion past due and \$612 million accruing at December 31, 2020.

Note 4: Loans and Related Allowance for Credit Losses (continued)

Table 4.10 provides the outstanding balances of our consumer loan portfolio by FICO score. Substantially all of the scored consumer portfolio has an updated FICO score of 680 and above, reflecting a strong current borrower credit profile. FICO scores are not available for certain loan types or may not be required if we deem it unnecessary due to strong collateral and

other borrower attributes. Loans not requiring a FICO score totaled \$15.9 billion and \$13.2 billion at June 30, 2021, and December 31, 2020, respectively. Substantially all loans not requiring a FICO score are securities-based loans originated through retail brokerage.

(1) Represents loans whose repayments are predominantly insured by the FHA or guaranteed by the VA.

LTV refers to the ratio comparing the loan's unpaid principal balance to the property's collateral value. CLTV refers to the combination of first lien mortgage and junior lien mortgage (including unused line amounts for credit line products) ratios. LTVs and CLTVs are updated quarterly using a cascade approach which first uses values provided by automated valuation models (AVMs) for the property. If an AVM is not available, then the

value is estimated using the original appraised value adjusted by the change in Home Price Index (HPI) for the property location. If an HPI is not available, the original appraised value is used. The HPI value is normally the only method considered for high value properties, generally with an original value of \$1 million or more, as the AVM values have proven less accurate for these properties.

Note 4: Loans and Related Allowance for Credit Losses (continued)

Table 4.11 shows the most updated LTV and CLTV distribution of the residential mortgage – first lien and residential mortgage – junior lien loan portfolios. We consider the trends in residential real estate markets as we monitor credit risk and establish our ACL. In the event of a default, any loss should be

limited to the portion of the loan amount in excess of the net realizable value of the underlying real estate collateral value. Certain loans do not have an LTV or CLTV due to industry data availability and portfolios acquired from or serviced by other institutions.

(1) Reflects total loan balances with LTV/CLTV amounts in excess of 100%. In the event of default, the loss content would generally be limited to only the amount in excess of 100% LTV/CLTV.
(2) Represents loans whose repayments are predominantly insured by the FHA or guaranteed by the VA.

NONACCRUAL LOANS Table 4.12 provides loans on nonaccrual status. In connection with our adoption of CECL, nonaccrual loans may have an ACL or a negative allowance for credit losses from expected recoveries of amounts previously written off. Payment

deferral activities instituted in response to the COVID-19 pandemic could continue to delay the recognition of delinquencies for customers who otherwise would have moved into nonaccrual status.

Table 4.12: Nonaccrual Loans

(1) Nonaccrual loans may not have an allowance for credit losses if the loss expectations are zero given solid collateral value.

LOANS IN PROCESS OF FORECLOSURE Our recorded investment in consumer mortgage loans collateralized by residential real estate property that are in process of foreclosure was \$939 million and \$2.1 billion at June 30, 2021, and December 31, 2020, respectively, which included \$650 million and \$1.7 billion, respectively, of loans that are government insured/guaranteed. Under the Consumer Financial Protection Bureau guidelines, we do not commence the foreclosure process on residential mortgage loans until after the loan is 120 days delinquent. Foreclosure procedures and timelines vary depending on whether the property address resides in a judicial or non-judicial state. Judicial states require the foreclosure to be processed through the state's courts while non-judicial states are processed without court intervention. Foreclosure timelines vary according to state law. In connection with our actions to support customers during the COVID-19 pandemic, we have suspended certain mortgage foreclosure activities.

Note 4: Loans and Related Allowance for Credit Losses (continued)

LOANS 90 DAYS OR MORE PAST DUE AND STILL ACCRUING Certain loans 90 days or more past due are still accruing, because they are (1) well-secured and in the process of collection or (2) residential mortgage or consumer loans exempt under regulatory rules from being classified as nonaccrual until later delinquency, usually 120 days past due.

Table 4.13 shows loans 90 days or more past due and still accruing by class for loans not government insured/guaranteed.

(1) Represents loans whose repayments are predominantly insured by the FHA or guaranteed by the VA.

TROUBLED DEBT RESTRUCTURINGS (TDRs) When, for economic or legal reasons related to a borrower's financial difficulties, we grant a concession for other than an insignificant period of time to a borrower that we would not otherwise consider, the related loan is classified as a TDR, the balance of which totaled \$12.5 billion and \$14.5 billion at June 30, 2021, and December 31, 2020, respectively. We do not consider loan resolutions such as foreclosure or short sale to be a TDR. In addition, COVID-related modifications are generally not classified as TDRs due to the relief under the CARES Act and the Interagency Statement. For additional information on the TDR relief, see Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K.

We may require some consumer borrowers experiencing financial difficulty to make trial payments generally for a period of three to four months, according to the terms of a planned permanent modification, to determine if they can perform according to those terms. These arrangements represent trial modifications, which we classify and account for as TDRs. While loans are in trial payment programs, their original terms are not considered modified and they continue to advance through delinquency status and accrue interest according to their original terms.

Commitments to lend additional funds on loans whose terms have been modified in a TDR amounted to \$344 million and \$489 million at June 30, 2021, and December 31, 2020, respectively.

Table 4.14 summarizes our TDR modifications for the periods presented by primary modification type and includes the financial effects of these modifications. For those loans that modify more than once, the table reflects each modification that occurred during the period. Loans that both modify and are paid off or written-off within the period, as well as changes in recorded investment during the period for loans modified in prior periods, are not included in the table.

- (1) Amounts represent the recorded investment in loans after recognizing the effects of the TDR, if any. TDRs may have multiple types of concessions, but are presented only once in the first modification type based on the order presented in the table above. The reported amounts include loans remodified of \$202 million and \$221 million for the quarters ended June 30, 2021 and 2020, respectively, and \$458 million and \$484 million for the first half of 2021 and 2020, respectively.
- (2) Other concessions include loans with payment (principal and/or interest) deferral, loans discharged in bankruptcy, loan renewals, term extensions and other interest and noninterest adjustments, but exclude modifications that also forgive principal and/or reduce the contractual interest rate. The reported amounts include COVID-related payment deferrals that are new TDRs and exclude COVID-related payment deferrals previously reported as TDRs given limited current financial effects other than payment deferral.
- (3) Charge-offs include write-downs of the investment in the loan in the period it is contractually modified. The amount of charge-off will differ from the modification terms if the loan has been charged down prior to the modification based on our policies. In addition, there may be cases where we have a charge-off/down with no legal principal modification.
- (4) Recorded investment related to interest rate reduction reflects the effect of reduced interest rates on loans with an interest rate concession as one of their concession types, which includes loans reported as a principal primary modification type that also have an interest rate concession.
- (5) Trial modifications are granted a delay in payments due under the original terms during the trial payment period. However, these loans continue to advance through delinquency status and accrue interest according to their original terms. Any subsequent permanent modification generally includes interest rate related concessions; however, the exact concession type and resulting financial effect are usually not known until the loan is permanently modified. Trial modifications for the period are presented net of previously reported trial modifications that became permanent in the current period.

Table 4.15 summarizes permanent modification TDRs that have defaulted in the current period within 12 months of their permanent modification date. We are reporting these defaulted

TDRs based on a payment default definition of 90 days past due for the commercial portfolio segment and 60 days past due for the consumer portfolio segment.

Note 5: Leasing Activity

The information below provides a summary of our leasing activities as a lessor and lessee. See Note 5 (Leasing Activity) in our 2020 Form 10-K for additional information about our leasing activities.

As a Lessor

Noninterest income on leases, which is presented in Table 5.1, is included in other noninterest income on our consolidated statement of income. Lease expense, included in other noninterest expense on our consolidated statement of income, was \$226 million and \$244 million for the quarters ended June 30, 2021 and 2020, respectively, and \$452 million and \$504 million for the first half of 2021 and 2020, respectively.

(1) Represents securities held as part of our customer accommodation trading activities. For additional information on these activities, see Note 2 (Trading Activities).

(2) Substantially all of these securities are economically hedged with equity derivatives.

(3) In second quarter 2021, we elected to change our accounting method for low-income housing tax credit investments and elected to change the presentation of investment tax credits related to solar energy investments. Prior period balances have been revised to conform with the current period presentation. For additional information, see Note 1 (Summary of Significant Accounting Policies).

(4) Substantially all relates to investments in Federal Reserve Bank stock at both June 30, 2021, and December 31, 2020.

(5) Represents nonmarketable equity securities accounted for under the measurement alternative, which were predominantly securities associated with our affiliated venture capital business.

Low-Income Housing Tax Credit Investments

We invest in affordable housing projects that qualify for the low-income housing tax credit (LIHTC), which are designed to promote private development of low-income housing. These investments typically generate a return through the realization of tax credits and other tax benefits. Table 6.2 summarizes the amortization of the investments and the related tax credits and other tax benefits that are recognized in income tax expense/ (benefit) on our consolidated statement of income. We are

periodically required to provide additional financial support during the investment period. A liability is recognized for unfunded commitments that are both legally binding and probable of funding. These commitments are predominantly funded within three years of initial investment. Our liability for these unfunded commitments was \$4.2 billion at both June 30, 2021, and December 31, 2020. This liability for unfunded commitments is included in long-term debt on our consolidated balance sheet.

Table 6.2: LIHTC Investments (1)

(in millions)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Proportional amortization of investments	\$ 382	352	764	703
Tax credits and other tax benefits	(431)	(401)	(875)	(797)
Net expense/(benefit) recognized within income tax expense	\$ (49)	(49)	(111)	(94)

(1) Excludes the impact of the estimated annual effective income tax rate applied to each period.

Note 6: Equity Securities (continued)

Realized Gains and Losses Not Held for Trading

Table 6.3 provides a summary of the net gains and losses from equity securities not held for trading, which excludes equity method adjustments for our share of the investee's earnings or

losses that are recognized in other noninterest income. Gains and losses for securities held for trading are reported in net gains on trading and securities.

Table 6.3: Net Gains (Losses) from Equity Securities Not Held for Trading

(in millions)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Net gains (losses) from equity securities carried at fair value:

Note 8: Securitizations and Variable Interest Entities

Involvement with Variable Interest Entities (VIEs)

In the normal course of business, we enter into various types of on- and off-balance sheet transactions with special purpose entities (SPEs), which are corporations, trusts, limited liability companies or partnerships that are established for a limited purpose. SPEs are often formed in connection with securitization transactions whereby financial assets are transferred to an SPE. SPEs formed in connection with securitization transactions are generally considered variable interest entities (VIEs). The VIE may alter the risk profile of the asset by entering into derivative transactions or obtaining credit support, and issues various forms of interests in those assets to investors. When we transfer financial assets from our consolidated balance sheet to a VIE in connection with a securitization, we typically receive cash and sometimes other interests in the VIE as proceeds for the assets we transfer. In certain transactions with VIEs, we may retain the right to service the transferred assets and repurchase the transferred assets if the outstanding balance of the assets falls below the level at which the cost to service the assets exceed the benefits. In addition, we may purchase the right to service loans transferred to a VIE by a third party.

In connection with our securitization or other VIE activities, we have various forms of ongoing involvement with VIEs, which may include:

- underwriting securities issued by VIEs and subsequently making markets in those securities;
- providing credit enhancement on securities issued by VIEs through the use of letters of credit or financial guarantees;
- entering into other derivative contracts with VIEs;
- holding senior or subordinated interests in VIEs;
- acting as servicer or investment manager for VIEs;
- providing administrative or trustee services to VIEs; and
- providing seller financing to VIEs.

Loan Sales and Securitization Activity

We periodically transfer consumer and commercial loans and other types of financial assets in securitization and whole loan sale transactions.

MORTGAGE LOANS SOLD TO U.S. GOVERNMENT SPONSORED ENTITIES AND TRANSACTIONS WITH GINNIE MAE In the normal course of business we sell originated and purchased residential and commercial mortgage loans to government-sponsored entities (GSEs). These loans are generally transferred into securitizations sponsored by the GSEs, which provide certain credit guarantees to investors and servicers. We also transfer mortgage loans into securitizations pursuant to Government National Mortgage Association (GNMA) guidelines which are insured by the Federal Housing Administration (FHA) or guaranteed by the Department of Veterans Affairs (VA). Mortgage loans eligible for securitization with the GSEs or GNMA are considered conforming loans. The GSEs or GNMA design the structure of these securitizations, sponsor the involved VIEs, and have power over the activities most significant to the VIE.

We account for loans transferred in conforming mortgage loan securitization transactions as sales and do not consolidate the VIEs as we are not the primary beneficiary. In exchange for the transfer of loans, we typically receive securities issued by the VIEs which we sell to third parties for cash or hold for investment purposes as HTM or AFS securities. We also retain servicing rights on the transferred loans. As a servicer, we retain the option

to repurchase loans from GNMA loan securitization pools, which becomes exercisable when three scheduled loan payments remain unpaid by the borrower. We repurchased loans of \$1.0 billion and \$2.9 billion, during the second quarter and first half of 2021, respectively, and \$3.6 billion and \$5.1 billion during the second quarter and first half of 2020, respectively, which predominantly represented repurchases of government insured loans. We recorded assets and related liabilities of \$128 million and \$176 million at June 30, 2021, and December 31, 2020, respectively, where we did not exercise our option to repurchase eligible loans.

Upon transfers of loans, we also provide indemnification for losses incurred due to material breaches of contractual representations and warranties, as well as other recourse arrangements. At June 30, 2021, and December 31, 2020, our liability associated with these provisions was \$201 million and \$221 million, respectively, and the maximum exposure to loss was \$13.4 billion and \$13.7 billion, respectively.

Off-balance sheet mortgage loans sold or securitized presented in Table 8.5 are predominantly loans securitized by the GSEs and GNMA. See Note 9 (Mortgage Banking Activities) for additional information about residential and commercial servicing rights, advances and servicing fees. Substantially all residential servicing activity is related to assets transferred to GSE and GNMA securitizations.

NONCONFORMING MORTGAGE LOAN SECURITIZATIONS In the normal course of business, we sell nonconforming residential and commercial mortgage loans in securitization transactions that we design and sponsor. Nonconforming mortgage loan securitizations do not involve a government credit guarantee, and accordingly, beneficial interest holders are subject to credit risk of the underlying assets held by the securitization VIE. We typically originate the transferred loans, account for the transfers as sales and do not consolidate the VIE. We also typically retain the right to service the loans and may hold other beneficial interests issued by the VIEs, such as debt securities held for investment purposes. Our servicing role related to nonconforming commercial mortgage loan securitizations is limited to primary or master servicer and the most significant decisions impacting the performance of the VIE are generally made by the special servicer or the controlling class security holder. For our residential nonconforming mortgage loan securitizations accounted for as sales, we either do not hold variable interests that we consider potentially significant or are not the primary servicer for a majority of the VIE assets.

WHOLE LOAN SALE TRANSACTIONS We also sell whole loans to VIEs where we have continuing involvement in the form of financing. We account for these transfers as sales, and do not consolidate the VIEs as we do not have the power to direct the most significant activities of the VIEs.

Table 8.1 presents information about transfers of assets during the period for which we recorded the transfers as sales and have continuing involvement with the transferred assets. In connection with these transfers, we received proceeds and recorded servicing assets, securities, and loans. Substantially all transfers were related to residential mortgage securitizations with the GSEs or GNMA and resulted in no gain or loss because the loans were already measured at fair value on a recurring basis. Each of these interests are initially measured at fair value.

Servicing rights are classified as Level 3 measurements, and generally securities are classified as Level 2.

Table 8.1: Transfers with Continuing Involvement

(in millions)	2021		2020

- (1) Represents cash proceeds and the fair value of non-cash beneficial interests recognized at securitization settlement. Prior periods have been revised to conform with the current period presentation.
(2) Represents assets or liabilities recognized at securitization settlement date related to our continuing involvement in the transferred assets.
(3) Represents debt securities obtained at securitization settlement held for investment purposes that are classified as available-for-sale or held-to-maturity, which predominantly relate to agency securities. Excludes trading debt securities held temporarily for market-marking purposes, which are sold to third parties at or shortly after securitization settlement, of \$11.2 billion and \$18.0 billion during the second quarter and first half of 2021, respectively, and \$9.4 billion and \$17.1 billion during the second quarter and first half of 2020, respectively.

In the normal course of business we purchase certain non-agency securities at initial securitization or subsequently in the secondary market. We also provide seller financing in the form of loans. We received cash flows of \$3.0 billion and \$3.1 billion during the second quarter and first half of 2021, respectively, and \$44 million and \$117 million during the second quarter and first half of 2020, respectively, related to principal and interest payments on these securities and loans.

Table 8.2 presents the key weighted-average assumptions we used to initially measure residential MSR recognized during the periods presented.

Table 8.2: Residential Mortgage Servicing Rights

	2021	2020
Quarter ended June 30,		
Prepayment speed (1)	13.4 %	15.0
Discount rate	6.1	7.0
Cost to service (\$ per loan) (2)	\$ 91	97
Six months ended June 30,		
Prepayment speed (1)	13.8 %	14.0
Discount rate	6.0	6.8
Cost to service (\$ per loan) (2)	\$ 87	94

- (1) The prepayment speed assumption for residential MSR includes a blend of prepayment speeds and default rates. Prepayment speed assumptions are influenced by mortgage interest rate inputs as well as our estimation of drivers of borrower behavior.
(2) Includes costs to service and unreimbursed foreclosure costs, which can vary period to period due to changes in model assumptions and the mix of modified government-guaranteed loans sold to GNMA.

See Note 15 (Fair Values of Assets and Liabilities) and Note 9 (Mortgage Banking Activities) for additional information on key economic assumptions for residential MSR.

SALE OF STUDENT LOAN PORTFOLIO In the second quarter and first half of 2021, we sold \$3.9 billion and \$9.5 billion of student loans, servicing-released, respectively. For the same periods, we received \$4.0 billion and \$9.8 billion in proceeds from the sales, respectively, and recognized \$147 million and \$355 million of gains, respectively, which are included in other noninterest income on our consolidated statement of income. In connection with the sales, we provided \$1.6 billion and \$3.8 billion of collateralized loan financing to a third-party sponsored VIE in the second quarter and first half of 2021, respectively. The loans are measured at amortized cost and are classified in loans on the consolidated balance sheet. The collateral supporting our loan includes the student loans we sold. We do not consolidate the VIE as we do not have power over the significant activities of the entity.

RESECURITIZATION ACTIVITIES We enter into resecuritization transactions as part of our trading activities to accommodate the investment and risk management activities of our customers. In our resecuritization transactions, we transfer trading debt securities to VIEs in exchange for new beneficial interests that are sold to third parties at or shortly after securitization settlement. This activity is performed for customers seeking a specific return or risk profile. Substantially all of our transactions involve the resecuritization of conforming mortgage-backed securities issued by the GSEs or GNMA. We do not consolidate the resecuritization VIEs as we share in the decision-making power with third parties and do not hold significant economic interests in the VIEs other than for market-making activities. Table 8.3 presents information about assets transferred to resecuritization VIEs and Table 8.4 presents information about our resecuritization VIEs.

Note 8: Securitizations and Variable Interest Entities (continued)

Table 8.3: Transfers to Resecuritization VIEs

(in millions)	2021	2020
Quarter ended June 30,		
Assets sold	\$ 7,873	19,982
Securities recognized	(99)	153
Six months ended June 30,		
Assets sold	\$ 25,302	29,454
Securities recognized	915	815

Table 8.4: Resecuritization VIEs

(in millions)	Jun 30, 2021	Dec 31, 2020
Total VIE assets	\$ 125,543	130,446
Carrying value of securities	1,137	1,461

Table 8.5: Off-Balance Sheet Loans Sold or Securitized

(in millions)	Total loans		Delinquent loans and foreclosed assets (1)		Net charge-offs (2)	
	Jun 30, 2021	Dec 31, 2020	Jun 30, 2021	Dec 31, 2020	Six months ended June 30,	
					2021	2020
Commercial	\$ 116,704	114,134	2,363	2,217	122	83
Residential	738,698	818,886	20,869	29,962	12	59
Total off-balance sheet sold or securitized loans (3)	\$ 855,402	933,020	23,232	32,179	134	142

(1) Includes \$203 million and \$394 million of commercial foreclosed assets and \$163 million and \$204 million of residential foreclosed assets at June 30, 2021, and December 31, 2020, respectively.

(2) Net charge-offs exclude loans sold to FNMA, FHLMC and GNMA as we do not service or manage the underlying real estate upon foreclosure and, as such, do not have access to net charge-off information.

(3) At June 30, 2021, and December 31, 2020, the table includes total loans of \$784.3 billion and \$864.8 billion, delinquent loans of \$19.8 billion and \$28.5 billion, and foreclosed assets of \$124 million and \$152 million, respectively, for FNMA, FHLMC and GNMA.

Transactions with Unconsolidated VIEs

MORTGAGE LOAN SECURITIZATIONS Table 8.6 includes nonconforming mortgage loan securitizations where we originate and transfer the loans to the unconsolidated securitization VIEs that we sponsor. For additional information about these VIEs, see the "Loan Sales and Securitization Activity" section within this Note. Nonconforming mortgage loan securitizations also include commercial mortgage loan securitizations sponsored by third parties where we did not originate or transfer the loans but serve as master servicer and invest in securities that could be potentially significant to the VIE.

Conforming loan securitization and resecuritization transactions involving the GSEs and GNMA are excluded from Table 8.6 because we are not the sponsor or we do not have power over the activities most significant to the VIEs. Additionally, due to the nature of the guarantees provided by the GSEs and the FHA and VA, our credit risk associated with these VIEs is limited. For additional information about conforming mortgage loan securitizations and resecuritizations, see the "Loan Sales and Securitization Activity" and "Resecuritization Activities" sections within this Note.

TAX CREDIT STRUCTURES We co-sponsor and make investments in affordable housing and sustainable energy projects that are designed to generate a return primarily through the realization of federal tax credits. The projects are typically managed by project sponsors who have the power over the VIE's assets. In some instances, our investments in these structures may require that we fund future capital commitments at the discretion of the project sponsors.

Off-Balance Sheet Loans

Table 8.5 presents information about the principal balances of off-balance sheet loans that were sold or securitized, including residential mortgage loans sold to the GSEs, GNMA and other investors, for which we have some form of continuing involvement (including servicer). Delinquent loans include loans 90 days or more past due and loans in bankruptcy, regardless of delinquency status. In accordance with applicable servicing guidelines, delinquency status continues to advance for loans with COVID-related payment deferrals. For loans sold or securitized where servicing is our only form of continuing involvement, we generally experience a loss only if we were required to repurchase a delinquent loan or foreclosed asset due to a breach in representations and warranties associated with our loan sale or servicing contracts.

COMMERCIAL REAL ESTATE LOANS We transfer purchased industrial development bonds and GSE credit enhancements to VIEs in exchange for beneficial interests. We own all of the beneficial interests and may also service the underlying mortgages that serve as collateral to the bonds. Prior to first quarter 2021, we consolidated these VIEs as we controlled the key decisions. During first quarter 2021, we amended the structures such that we no longer control the key decisions of the VIEs. The GSEs have the power to direct the servicing and workout activities of the VIE in the event of a default. As a result, we deconsolidated the VIEs during first quarter 2021, and recognized the beneficial interests at fair value on our consolidated balance sheet.

OTHER VIE STRUCTURES We engage in various forms of structured finance arrangements with other VIEs, including collateralized debt obligations, asset-backed finance structures and other securitizations collateralized by asset classes other than mortgages. Collateral may include rental properties, asset-backed securities, student loans, mortgage loans and auto loans. We may participate in structuring or marketing the arrangements, as well as provide financing, service one or more of the underlying assets, or enter into derivatives with the VIEs. We may also receive fees for those services. We are not the primary beneficiary of these structures because we do not have power to direct the most significant activities of the VIEs.

Table 8.6 provides a summary of our exposure to the unconsolidated VIEs described above, which includes investments in securities, loans, guarantees, liquidity agreements, commitments and certain derivatives. We exclude certain transactions with unconsolidated VIEs when our continuing involvement is temporary or administrative in nature or insignificant in size.

In Table 8.6, “Total VIE assets” represents the remaining principal balance of assets held by unconsolidated VIEs using the most current information available. For VIEs that obtain exposure to assets synthetically through derivative instruments, the notional amount of the derivative is included in the asset balance. “Carrying value” is the amount in our consolidated balance sheet related to our involvement with the unconsolidated VIEs. “Maximum exposure to loss” is determined as the carrying value of our investment in the VIEs excluding the unconditional repurchase options that have not been exercised, plus the remaining undrawn liquidity and lending commitments, the notional amount of net written derivative contracts, and

generally the notional amount of, or stressed loss estimate for, other commitments and guarantees.

Debt, guarantees and other commitments include amounts related to loans sold that we may be required to repurchase, or otherwise indemnify or reimburse the investor or insurer for losses incurred, due to material breach of contractual representations and warranties as well as other retained recourse arrangements. The maximum exposure to loss for material breach of contractual representations and warranties represents a stressed case estimate we utilize for determining stressed case regulatory capital needs and is considered to be a remote scenario.

“Maximum exposure to loss” represents estimated loss that would be incurred under severe, hypothetical circumstances, for which we believe the possibility is extremely remote, such as where the value of our interests and any associated collateral declines to zero, without any consideration of recovery or offset from any economic hedges. Accordingly, this disclosure is not an indication of expected loss.

Table 8.6: Unconsolidated VIEs

(in millions)	Total VIE assets	Carrying value – asset (liability)					
		Loans	Debt securities (1)	Equity securities	All other assets (2)	Debt and other liabilities	Net assets

Total	\$ 1,849	1,849	2,303	11,413	669	3,372	19,606

(1) Includes \$317 million and \$310 million of securities classified as trading at June 30, 2021, and December 31, 2020, respectively.

(2) All other assets includes mortgage servicing rights, derivative assets, and other assets (predominantly servicing advances).

(3) In second quarter 2021, we elected to change our accounting method for low-income housing tax credit investments. Prior period balances have been revised to conform with the current period presentation. For additional information, see Note 1 (Summary of Significant Accounting Policies).

Note 8: Securitizations and Variable Interest Entities (continued)

Consolidated VIEs

We consolidate VIEs where we are the primary beneficiary. We are the primary beneficiary of the following structure types:

COMMERCIAL AND INDUSTRIAL LOANS AND LEASES We securitize dealer floor plan loans and leases in a revolving master trust entity and hold the subordinated notes and residual equity interests. As servicer and residual interest holder, we control the key decisions of the trust and consolidate the entity. The total VIE assets held by the master trust represent a majority of the total VIE assets presented for this category in Table 8.7. In a separate transaction structure, we also provide the majority of debt and equity financing to an SPE that engages in lending and leasing to specific vendors and service the underlying collateral.

OTHER VIE STRUCTURES Other VIEs are primarily related to municipal tender option bond (MTOB) transactions and nonconforming mortgage loan securitizations that we sponsor. MTOBs are vehicles to finance the purchase of municipal bonds through the issuance of short-term debt to investors. Our involvement with MTOBs includes serving as the residual interest

holder, which provides control over the key decisions of the VIE, as well as the remarketing agent or liquidity provider related to the debt issued to investors. We also securitize nonconforming mortgage loans, in which our involvement includes servicer of the underlying assets and holder of subordinate or senior securities issued by the VIE.

Table 8.7 presents a summary of financial assets and liabilities of our consolidated VIEs. The carrying value represents assets and liabilities recorded on our consolidated balance sheet. Carrying values of assets are presented using GAAP measurement methods, which may include fair value, credit impairment or other adjustments, and therefore in some instances will differ from "Total VIE assets." For VIEs that obtain exposure synthetically through derivative instruments, the notional amount of the derivative is included in "Total VIE assets."

On our consolidated balance sheet, we separately disclose (1) the consolidated assets of certain VIEs that can only be used to settle the liabilities of those VIEs, and (2) the consolidated liabilities of certain VIEs for which the VIE creditors do not have recourse to Wells Fargo.

Table 8.7: Transactions with Consolidated VIEs

(in millions)	Total VIE assets	Carrying value – asset (liability)				
		Loans	Debt securities (1)	All other assets (2)	Long-term debt	All other liabilities (3)
June 30, 2021						
Commercial and industrial loans and leases	\$ 6,981	3,623	—	238	—	(183)
Commercial real estate loans (4)	—	—	—	—	—	—
Other	1,138	452	518	96	(178)	(404)
Total consolidated VIEs	\$ 8,119	4,075	518	334	(178)	(587)
December 31, 2020						
Commercial and industrial loans and leases	\$ 6,987	5,005	—	223	—	(200)
Commercial real estate loans (4)	5,369	5,357	—	12	—	—
Other	1,627	507	967	75	(203)	(900)
Total consolidated VIEs	\$ 13,983	10,869	967	310	(203)	(1,100)

(1) Includes \$117 million and \$269 million of securities classified as trading at June 30, 2021, and December 31, 2020, respectively.

(2) All other assets includes cash and due from banks, interest-earning deposits with banks, derivative assets, equity securities, and other assets.

(3) All other liabilities includes short-term borrowings, derivative liabilities, and accrued expenses and other liabilities.

(4) For structure description, see the "Transactions with Unconsolidated VIEs" section within this Note. These consolidated VIEs were deconsolidated in first quarter 2021.

Other Transactions

In addition to the transactions included in the previous tables, we have used wholly-owned trust preferred security VIEs to issue debt securities or preferred equity exclusively to third-party investors. As the sole assets of the VIEs are receivables from us, we do not consolidate the VIEs even though we own all of the voting equity shares of the VIEs, have fully guaranteed the obligations of the VIEs, and may have the right to redeem the third-party securities under certain circumstances. In our consolidated balance sheet we reported the debt securities issued to the VIEs as long-term junior subordinated debt with a carrying value of \$381 million and \$704 million at June 30, 2021, and December 31, 2020, respectively. In second quarter 2021, we liquidated certain of our trust preferred security VIEs. As part of these liquidations, the preferred securities issued by the trusts were canceled and junior subordinated debentures with a total carrying value of \$332 million were distributed to the preferred security holders. See Note 16 (Preferred Stock) for additional information about trust preferred securities.

Certain money market funds are also excluded from the previous tables because they are exempt from the consolidation analysis. We voluntarily waived a portion of our management fees for these money market funds to maintain a minimum level of daily net investment income. The amount of fees waived was insignificant in the second quarter and first half of both 2021 and 2020.

Note 9: Mortgage Banking Activities

Mortgage banking activities consist of residential and commercial mortgage originations, sales and servicing.

We apply the amortization method to commercial MSR and apply the fair value method to residential MSRs. The amortized

cost of commercial MSRs was \$1.3 billion and \$1.4 billion with an estimated fair value of \$1.5 billion and \$1.4 billion at June 30, 2021, and June 30, 2020, respectively. Table 9.1 presents the changes in MSRs measured using the fair value method.

Table 9.1: Analysis of Changes in Fair Value MSRs

(in millions)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Fair value, beginning of period	\$ 7,536	8,126	6,125	11,517
Servicing from securitizations or asset transfers (1)	485	462	891	923
Sales and other (2)	(7)	(1)	(8)	(32)
Net additions	478	461	883	891
Changes in fair value:				
Due to valuation inputs or assumptions:				
Mortgage interest rates (3)	(529)	(600)	1,101	(3,622)
Servicing and foreclosure costs (4)	—	(349)	9	(422)
Discount rates	160	—	207	27
Prepayment estimates and other (5)	(440)	(182)	(535)	(371)
Net changes in valuation inputs or assumptions	(809)	(1,131)	782	(4,388)
Changes due to collection/realization of expected cash flows (6)	(488)	(637)	(1,073)	(1,201)
Total changes in fair value	(1,297)	(1,768)	(291)	(5,589)
Fair value, end of period	\$ 6,717	6,819	6,717	6,819

(1) Includes impacts associated with exercising cleanup calls on securitizations and our right to repurchase delinquent loans from GNMA loan securitization pools. MSRs may increase upon repurchase due to servicing liabilities associated with these delinquent GNMA loans.

(2) Includes sales and transfers of MSRs, which can result in an increase in MSRs if related to portfolios with servicing liabilities.

(3) Includes prepayment speed changes as well as other valuation changes due to changes in mortgage interest rates.

(4) Includes costs to service and unreimbursed foreclosure costs.

(5) Represents other changes in valuation model inputs or assumptions including prepayment speed estimation changes that are independent of mortgage interest rate changes.

(6) Represents the reduction in the MSR fair value for the cash flows expected to be collected during the period, net of income accreted due to the passage of time.

Table 9.2 provides key economic assumptions and sensitivity of the current fair value of residential MSRs to immediate adverse changes in those assumptions. Amounts for residential MSRs include purchased servicing rights as well as servicing

rights resulting from the transfer of loans. See Note 15 (Fair Values of Assets and Liabilities) for additional information on key economic assumptions for residential MSRs.

Table 9.2: Economic Assumptions and Sensitivity of Residential MSRs

(\$ in millions, except cost to service amounts)	Jun 30, 2021	Dec 31, 2020
Fair value of interests held	\$ 6,717	6,125
Expected weighted-average life (in years)	4.2	3.7
Key economic assumptions:		
Prepayment speed assumption	17.2 %	19.9
Impact on fair value from 10% adverse change	\$ 417	434
Impact on fair value from 25% adverse change	967	1,002
Discount rate assumption	5.4 %	5.8
Impact on fair value from 100 basis point increase	\$ 274	229
Impact on fair value from 200 basis point increase	525	440
Cost to service assumption (\$ per loan)	111	130
Impact on fair value from 10% adverse change	171	181
Impact on fair value from 25% adverse change	427	454

The sensitivities in the preceding table are hypothetical and caution should be exercised when relying on this data. Changes in value based on variations in assumptions generally cannot be extrapolated because the relationship of the change in the assumption to the change in value may not be linear. Also, the effect of a variation in a particular assumption on the value of the other interests held is calculated independently without changing any other assumptions. In reality, changes in one factor may

result in changes in others, which might magnify or counteract the sensitivities.

Note 9: Mortgage Banking Activities (continued)

We present the components of our managed servicing portfolio in Table 9.3 at unpaid principal balance for loans serviced and subserviced for others and at book value for owned loans serviced.

Table 9.3: Managed Servicing Portfolio

(in billions)	Jun 30, 2021	Dec 31, 2020
Residential mortgage servicing:		
Serviced and subserviced for others	\$ 771	859
Owned loans serviced	284	323
Total residential servicing	1,055	1,182
Commercial mortgage servicing:		
Serviced and subserviced for others	584	583
Owned loans serviced	123	123
Total commercial servicing	707	706
Total managed servicing portfolio	\$ 1,762	1,888
Total serviced for others, excluding subserviced for others	\$ 1,344	1,431
MSRs as a percentage of loans serviced for others	0.60 %	0.52
Weighted average note rate (mortgage loans serviced for others)	3.93	4.03

At both June 30, 2021, and December 31, 2020, we had servicing advances, net of an allowance for uncollectible amounts, of \$3.4 billion. As the servicer of loans for others, we advance certain payments of principal, interest, taxes, insurance, and default-related expenses which are generally reimbursed within a short timeframe from cash flows from the trust, GSEs, insurer or borrower. The credit risk related to these advances is limited since the reimbursement is generally senior to cash payments to investors. We also advance payments of taxes and insurance for our owned loans which are collectible from the borrower. We

maintain an allowance for uncollectible amounts for advances on loans serviced for others that may not be reimbursed if the payments were not made in accordance with applicable servicing agreements or if the insurance or servicing agreements contain limitations on reimbursements. Servicing advances on owned loans are charged-off when deemed uncollectible.

Table 9.4 presents the components of mortgage banking noninterest income.

Table 9.4: Mortgage Banking Noninterest Income

(in millions)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Servicing fees:				
Contractually specified servicing fees, late charges and ancillary fees	\$ 692	749	1,416	1,614
Unreimbursed direct servicing costs (1)	(90)	(105)	(214)	(212)
Servicing fees	602	644	1,202	1,402
Amortization (2)	(33)	(100)	(98)	(166)
Changes due to collection/realization of expected cash flows (3)	(A) (488)	(637)	(1,073)	(1,201)
Net servicing fees	81	(93)	31	35
Changes in fair value of MSRs due to valuation inputs or assumptions (4)	(B) (809)	(1,131)	782	(4,388)
Net derivative gains (losses) from economic hedges (5)	707	535	(933)	3,935
Market-related valuation changes to MSRs, net of hedge results	(102)	(596)	(151)	(453)
Total servicing income, net	(21)	(689)	(120)	(418)
Net gains on mortgage loan originations/sales (6)	1,357	1,006	2,782	1,114
Total mortgage banking noninterest income	\$ 1,336	317	2,662	696
Total changes in fair value of MSRs carried at fair value	(A)+(B) (1,297)	(1,768)	(291)	(5,589)

(1) Includes costs associated with foreclosures, unreimbursed interest advances to investors, and other interest costs.

(2) Includes a \$37 million reversal of impairment recorded in the second quarter and first half of 2021, on the commercial amortized MSRs. Also, includes \$30 million impairment recorded in the second quarter and first half of 2020, on the commercial amortized MSRs.

(3) Represents the reduction in the MSR fair value for the cash flows expected to be collected during the period, net of income accreted due to the passage of time.

(4) Refer to the analysis of changes in fair value MSRs presented in Table 9.1 in this Note for more detail.

(5) See Note 14 (Derivatives) for additional discussion and detail on economic hedges.

(6) Includes net gains (losses) of \$(420) million and \$845 million in the second quarter and first half of 2021, respectively, and \$(393) million and \$(1.3) billion in the second quarter and first half of 2020, respectively, related to derivatives used as economic hedges of mortgage loans held for sale and derivative loan commitments.

Note 10: Intangible Assets

Table 10.1 presents the gross carrying value of intangible assets and accumulated amortization.

Table 10.1: Intangible Assets

(in millions)	June 30, 2021			December 31, 2020		
	Gross carrying value	Accumulated amortization	Net carrying value	Gross carrying value	Accumulated amortization	Net carrying value
Amortized intangible assets (1):						
MSRs (2)	\$ 4,690	(3,398)	1,292	4,612	(3,300)	1,312
Customer relationship and other intangibles	879	(592)	287	879	(551)	328
Total amortized intangible assets	\$ 5,569	(3,990)	1,579	5,491	(3,851)	1,640
Unamortized intangible assets:

Goodwill	26,194			26,392		
Trademark	14			14		

(1) Balances are excluded commencing in the period following full amortization.

(2) Includes a \$5 million and \$37 million valuation allowance recorded for amortized MSRs at June 30, 2021, and December 31, 2020, respectively. See Note 9 (Mortgage Banking Activities) for additional information on MSRs.

Table 10.2 provides the current year and estimated future amortization expense for amortized intangible assets. We based our projections of amortization expense shown below on existing

asset balances at June 30, 2021. Future amortization expense may vary from these projections.

Table 10.2: Amortization Expense for Intangible Assets

(in millions)	Amortized MSRs	Customer relationship and other intangibles	Total
Six months ended June 30, 2021 (actual)	\$ 98	41	139

2025	152	39	191
2026	117	32	149

In the first half of 2021, we announced agreements to sell Wells Fargo Asset Management and Corporate Trust Services and transferred the associated goodwill from the Wealth and Investment Management operating segment and the Commercial Banking operating segment, respectively, to

Corporate. Also in the first half of 2021, we recognized goodwill write-downs related to sales of the student loan portfolio and our Canadian equipment finance business. Table 10.3 shows the allocation of goodwill to our reportable operating segments.

Note 11: Guarantees and Other Commitments

Guarantees are contracts that contingently require us to make payments to a guaranteed party based on an event or a change in an underlying asset, liability, rate or index. Guarantees are generally in the form of standby and direct pay letters of credit,

written options, recourse obligations, and other types of similar arrangements. Table 11.1 shows carrying value, maximum exposure to loss on our guarantees and the related non-investment grade amounts.

Table 11.1: Guarantees – Carrying Value and Maximum Exposure to Loss

(in millions)	Carrying value of obligation (asset)	Maximum exposure to loss						
		Expires in one year or less	Expires after one year through three years	Expires after three years through five years	Expires after five years	Total	Non-investment grade	
June 30, 2021								
Standby letters of credit	\$ 132	12,639	4,838	1,927	457	19,861	6,873	
Direct pay letters of credit	10	1,927	2,544	368	43	4,882	1,140	
Written options (1)	(548)	12,943	6,278	723	58	20,002	13,666	
Loans and LHFS sold with recourse (2)	30	89	826	3,010	9,323	13,248	11,216

Written options (1)	(538)	12,735	7,972	889	58	21,654	13,394	
Loans and LHFS sold with recourse (2)	33	177	819	1,870	9,723	12,589	10,332	
Exchange and clearing house guarantees	—	—	—	—	5,510	5,510	—	
Other guarantees and indemnifications (3)	—	734	1	1	1,414	2,150	590	
Total guarantees	\$ (331)	27,879	16,500	5,188	17,177	66,744	32,946	

- (1) Written options, which are in the form of derivatives, are also included in the derivative disclosures in Note 14 (Derivatives). Carrying value net asset position is a result of certain deferred premium option trades.
- (2) Represents recourse provided, all to the GSEs, on loans sold under various programs and arrangements.
- (3) Includes indemnifications provided to certain third-party clearing agents. Estimated maximum exposure to loss was \$210 million and \$1.4 billion with related collateral of \$2.1 billion and \$1.2 billion as of June 30, 2021, and December 31, 2020, respectively.

“Maximum exposure to loss” and “Non-investment grade” are required disclosures under GAAP. Maximum exposure to loss represents the estimated loss that would be incurred under an assumed hypothetical circumstance, despite what we believe is a remote possibility, where the value of our interests and any associated collateral declines to zero. Maximum exposure to loss estimates in Table 11.1 do not reflect economic hedges or collateral we could use to offset or recover losses we may incur under our guarantee agreements. Accordingly, this required disclosure is not an indication of expected loss. We believe the carrying value is more representative of our exposure to loss than maximum exposure to loss. The carrying value represents the fair value of the guarantee, if any, and also includes an ACL for guarantees, if applicable.

Non-investment grade represents those guarantees on which we have a higher risk of performance under the terms of the guarantee. If the underlying assets under the guarantee are non-investment grade (that is, an external rating that is below investment grade or an internal credit default grade that is equivalent to a below investment grade external rating), we consider the risk of performance to be high. Internal credit default grades are determined based upon the same credit policies that we use to evaluate the risk of payment or performance when making loans and other extensions of credit. Credit quality indicators we usually consider in evaluating risk of payments or performance are described in Note 4 (Loans and Related Allowance for Credit Losses).

MERCHANT PROCESSING SERVICES We provide debit and credit card transaction processing services through payment networks directly for merchants and as a sponsor for merchant processing servicers, including our joint venture with a third party that is accounted for as an equity method investment. In our role as the merchant acquiring bank, we have a potential obligation in connection with payment and delivery disputes between the merchant and the cardholder that are resolved in favor of the cardholder. If we are unable to collect the amounts from the merchant, we incur a loss for the refund to the cardholder. We are secondarily obligated to make a refund for transactions involving sponsored merchant processing servicers. We generally have a low likelihood of loss in connection with our merchant processing services because most products and services are delivered when purchased and amounts are generally refunded when items are returned to the merchant. In addition, we may reduce our risk in connection with these transactions by withholding future payments and requiring cash or other collateral. For the first half of 2021, we processed card transaction volume of \$790.2 billion as a merchant acquiring bank, and related losses, including those from our joint venture entity, were immaterial.

GUARANTEES OF SUBSIDIARIES In the normal course of business, the Parent may provide counterparties with guarantees related to its subsidiaries' obligations. These obligations are included in the Company's consolidated balance sheet or are reflected as off-balance sheet commitments, and therefore, the Parent has not recognized a separate liability for these guarantees.

The Parent fully and unconditionally guarantees the payment of principal, interest, and any other amounts that may be due on securities that its 100% owned finance subsidiary, Wells Fargo Finance LLC, may issue. These securities are not guaranteed by any other subsidiary of the Parent. The guaranteed liabilities were \$1.6 billion and \$2.3 billion at June 30, 2021, and December 31, 2020, respectively. These guarantees rank on parity with all of the Parent's other unsecured and unsubordinated indebtedness. The assets of the Parent consist primarily of equity in its subsidiaries, and the Parent is a separate and distinct legal entity from its subsidiaries. As a result, the Parent's ability to address claims of holders of these debt securities against the Parent under the guarantee depends on the Parent's receipt of dividends, loan payments and other funds from its subsidiaries. If any of the Parent's subsidiaries becomes insolvent, the direct creditors of that subsidiary will have a prior claim on that subsidiary's assets. The rights of the Parent and the rights of the Parent's creditors will be subject to that prior claim unless the Parent is also a direct creditor of that subsidiary. For additional information regarding other restrictions on the Parent's ability to receive dividends, loan payments and other funds from its subsidiaries, see Note 23 (Regulatory Capital Requirements and Other Restrictions).

OTHER COMMITMENTS To meet the financing needs of our customers, we may enter into commitments to purchase debt and equity securities to provide capital for their funding, liquidity or other future needs. As of both June 30, 2021, and December 31, 2020, we had commitments to purchase debt securities of \$18 million and commitments to purchase equity securities of \$3.2 billion.

As part of maintaining our memberships in certain clearing organizations, we are required to stand ready to provide liquidity to sustain market clearing activity in the event unforeseen events occur or are deemed likely to occur. Certain of these obligations are guarantees of other members' performance and accordingly are included in Table 11.1 in Other guarantees and indemnifications.

Also, we have commitments to purchase loans and securities under resale agreements from certain counterparties, including central clearing organizations. The amount of our unfunded contractual commitments was \$12.9 billion and \$12.0 billion as of June 30, 2021, and December 31, 2020, respectively.

Given the nature of these commitments, they are excluded from Table 4.4 (Unfunded Credit Commitments) in Note 4 (Loans and Related Allowance for Credit Losses).

Note 12: Pledged Assets and Collateral

Pledged Assets

Table 12.1 provides the carrying amount of on-balance sheet pledged assets and the fair value of other pledged collateral. Other pledged collateral is collateral we have received from third parties, have the right to repledge and is not recognized on our consolidated balance sheet.

TRADING RELATED ACTIVITY Our trading businesses may pledge debt and equity securities in connection with securities sold under agreements to repurchase (repurchase agreements) and securities lending arrangements. The collateral that we pledge related to our trading activities may include our own collateral as well as collateral that we have received from third parties and have the right to repledge. All of the collateral we pledge related to trading activity is eligible to be repledged or sold by the secured party.

NON-TRADING RELATED ACTIVITY As part of our liquidity management strategy, we may pledge loans, debt securities, and

other financial assets to secure trust and public deposits, borrowings and letters of credit from the Federal Home Loan Bank (FHLB) and the Board of Governors of the Federal Reserve System (FRB) and for other purposes as required or permitted by law or insurance statutory requirements. Substantially all of the non-trading activity pledged collateral is not eligible to be repledged or sold by the secured party.

VIE RELATED We pledge assets in connection with various types of transactions entered into with VIEs. These pledged assets can only be used to settle the liabilities of those entities.

We also have loans recorded on our consolidated balance sheet which represent certain delinquent loans that are eligible for repurchase from GNMA loan securitizations. See Note 8 (Securitizations and Variable Interest Entities) for additional information on consolidated VIE assets.

Table 12.1: Pledged Assets

(in millions)	Jun 30, 2021	Dec 31, 2020
Related to trading activities:		
Repledged third-party owned debt and equity securities	\$ 37,134	44,765

Equity securities	704	470
Total pledged assets related to trading activities	56,200	64,807
Related to non-trading activities:		
Loans	308,551	344,220
Debt securities:		
Available-for-sale	59,512	57,289
Held-to-maturity	11,552	17,290
Other financial assets	531	230
Total pledged assets related to non-trading activities	380,146	419,029
Related to VIEs:		
Consolidated VIE assets	4,927	12,146
Loans eligible for repurchase from GNMA securitizations	130	179
Total pledged assets related to VIEs	5,057	12,325
Total pledged assets	\$ 441,403	496,161

Securities Financing Activities

We enter into resale and repurchase agreements and securities borrowing and lending agreements (collectively, "securities financing activities") typically to finance trading positions (including securities and derivatives), acquire securities to cover short trading positions, accommodate customers' financing needs, and settle other securities obligations. These activities are conducted through our broker-dealer subsidiaries and, to a lesser extent, through other bank entities. Our securities financing activities primarily involve high-quality, liquid securities such as U.S. Treasury securities and government agency securities and, to a lesser extent, less liquid securities, including equity securities, corporate bonds and asset-backed securities. We account for these transactions as collateralized financings in which we typically receive or pledge securities as collateral. We believe these financing transactions generally do not have material credit risk given the collateral provided and the related monitoring processes.

OFFSETTING OF SECURITIES FINANCING ACTIVITIES Table 12.2 presents resale and repurchase agreements subject to master repurchase agreements (MRA) and securities borrowing and lending agreements subject to master securities lending agreements (MSLA). Collateralized financings, and those with a single counterparty, are presented net on our consolidated balance sheet, provided certain criteria are met that permit balance sheet netting. Substantially all transactions subject to these agreements do not meet those criteria and thus are not eligible for balance sheet netting.

Collateral we pledged consists of non-cash instruments, such as securities or loans, and is not netted on the consolidated balance sheet against the related liability. Collateral we received includes securities or loans and is not recognized on our consolidated balance sheet. Collateral pledged or received may be increased or decreased over time to maintain certain contractual thresholds, as the assets underlying each arrangement fluctuate in value. Generally, these agreements require collateral to exceed the asset or liability recognized on

the balance sheet. The following table includes the amount of collateral pledged or received related to exposures subject to enforceable MRAs or MSLAs. While these agreements are typically over-collateralized, U.S. GAAP requires disclosure in this table to limit the reported amount of such collateral to the

amount of the related recognized asset or liability for each counterparty.

In addition to the amounts included in Table 12.2, we also have balance sheet netting related to derivatives that is disclosed in Note 14 (Derivatives).

Table 12.2: Offsetting – Securities Financing Activities

(in millions)	Jun 30, 2021	Dec 31, 2020
Assets:		
Resale and securities borrowing agreements		
Gross amounts recognized	\$ 101,027	92,446
Gross amounts offset in consolidated balance sheet (1)	(13,845)	(11,513)
Net amounts in consolidated balance sheet (2)	87,182	80,933
Collateral not recognized in consolidated balance sheet (3)	(86,453)	(80,158)
Net amount (4)	\$ 729	775
Liabilities:		
Repurchase and securities lending agreements		
Gross amounts recognized	\$ 47,281	57,622
Gross amounts offset in consolidated balance sheet (1)	(13,844)	(11,513)
Net amounts in consolidated balance sheet (5)	33,437	46,109
Collateral pledged but not netted in consolidated balance sheet (6)	(33,177)	(45,819)
Net amount (4)	\$ 260	290

- (1) Represents recognized amount of resale and repurchase agreements with counterparties subject to enforceable MRAs that have been offset in the consolidated balance sheet.
- (2) Includes \$70.1 billion and \$65.6 billion classified on our consolidated balance sheet in federal funds sold and securities purchased under resale agreements at June 30, 2021, and December 31, 2020, respectively. Also includes securities purchased under long-term resale agreements (generally one year or more) classified in loans, which totaled \$17.1 billion and \$15.3 billion, at June 30, 2021, and December 31, 2020, respectively.
- (3) Represents the fair value of collateral we have received under enforceable MRAs or MSLAs, limited in the table above to the amount of the recognized asset due from each counterparty. At June 30, 2021, and December 31, 2020, we have received total collateral with a fair value of \$118.9 billion and \$108.5 billion, respectively, all of which we have the right to sell or repledge. These amounts include securities we have sold or repledged to others with a fair value of \$34.5 billion and \$36.1 billion at June 30, 2021, and December 31, 2020, respectively.
- (4) Represents the amount of our exposure (assets) or obligation (liabilities) that is not collateralized and/or is not subject to an enforceable MRA or MSLA.
- (5) Amount is classified in short-term borrowings on our consolidated balance sheet.
- (6) Represents the fair value of collateral we have pledged, related to enforceable MRAs or MSLAs, limited in the table above to the amount of the recognized liability owed to each counterparty. At June 30, 2021, and December 31, 2020, we have pledged total collateral with a fair value of \$48.5 billion and \$59.2 billion, respectively, substantially all of which may be sold or repledged by the counterparty.

REPURCHASE AND SECURITIES LENDING AGREEMENTS Securities sold under repurchase agreements and securities lending arrangements are effectively short-term collateralized borrowings. In these transactions, we receive cash in exchange for transferring securities as collateral and recognize an obligation to reacquire the securities for cash at the transaction's maturity. These types of transactions create risks, including (1) the counterparty may fail to return the securities at maturity, (2) the fair value of the securities transferred may decline below the amount of our obligation to reacquire the securities, and therefore create an obligation for us to pledge additional amounts, and (3) the counterparty may accelerate the maturity on demand, requiring us to reacquire the security prior to contractual maturity. We attempt to mitigate these risks in various ways. Our collateral primarily consists of highly liquid securities. In addition, we underwrite and monitor the financial strength of our counterparties, monitor the fair value of collateral pledged relative to contractually required repurchase amounts, and monitor that our collateral is properly returned through the clearing and settlement process in advance of our cash repayment. Table 12.3 provides the gross amounts recognized on the consolidated balance sheet (before the effects of offsetting) of our liabilities for repurchase and securities lending agreements disaggregated by underlying collateral type.

Note 12: Pledged Assets and Collateral (continued)

Table 12.3: Gross Obligations by Underlying Collateral Type

(in millions)		Jun 30, 2021	Dec 31, 2020
Repurchase agreements:			
Securities of U.S. Treasury and federal agencies	\$	19,730	22,922
Securities of U.S. States and political subdivisions		24	4
Federal agency mortgage-backed securities		8,029	15,353
Non-agency mortgage-backed securities		860	1,069
Corporate debt securities		10,047	9,944
Asset-backed securities		1,262	1,054
Equity securities		892	1,500
Other		783	336
Total repurchases		41,627	52,182
Securities lending arrangements:			
Securities of U.S. Treasury and federal agencies		42	64
Federal agency mortgage-backed securities		31	23
Corporate debt securities		45	79
Equity securities (1)		5,422	5,189
Other		114	85
Total securities lending		5,654	5,440
Total repurchases and securities lending	\$	47,281	57,622

(1) Equity securities are generally exchange traded and represent collateral received from third parties that has been repledged. We received the collateral through either margin lending agreements or contemporaneous securities borrowing transactions with other counterparties.

Table 12.4 provides the contractual maturities of our gross obligations under repurchase and securities lending agreements.

Table 12.4: Contractual Maturities of Gross Obligations

(in millions)		Overnight/ continuous	Up to 30 days	30-90 days	>90 days	Total gross obligation
June 30, 2021						
Repurchase agreements	\$	28,584	3,093	4,765	5,185	41,627
Securities lending arrangements		4,853	200	601	—	5,654
Total repurchases and securities lending (1)	\$	33,437	3,293	5,366	5,185	47,281
December 31, 2020						
Repurchase agreements	\$	36,946	5,251	5,100	4,885	52,182
Securities lending arrangements		4,690	400	350	—	5,440
Total repurchases and securities lending (1)	\$	41,636	5,651	5,450	4,885	57,622

(1) Securities lending is executed under agreements that allow either party to terminate the transaction without notice, while repurchase agreements have a term structure to them that technically matures at a point in time. The overnight/continuous repurchase agreements require election of both parties to roll the trade rather than the election to terminate the arrangement as in securities lending.

Note 13: Legal Actions

Wells Fargo and certain of our subsidiaries are involved in a number of judicial, regulatory, governmental, arbitration, and other proceedings or investigations concerning matters arising from the conduct of our business activities, and many of those proceedings and investigations expose Wells Fargo to potential financial loss. These proceedings and investigations include actions brought against Wells Fargo and/or our subsidiaries with respect to corporate-related matters and transactions in which Wells Fargo and/or our subsidiaries were involved. In addition, Wells Fargo and our subsidiaries may be requested to provide information or otherwise cooperate with government authorities in the conduct of investigations of other persons or industry groups.

Although there can be no assurance as to the ultimate outcome, Wells Fargo and/or our subsidiaries have generally denied, or believe we have a meritorious defense and will deny, liability in all significant legal actions pending against us, including the matters described below, and we intend to defend vigorously each case, other than matters we describe as having settled. We establish accruals for legal actions when potential losses associated with the actions become probable and the costs can be reasonably estimated. For such accruals, we record the amount we consider to be the best estimate within a range of potential losses that are both probable and estimable; however, if we cannot determine a best estimate, then we record the low end of the range of those potential losses. The actual costs of resolving legal actions may be substantially higher or lower than the amounts accrued for those actions.

ATM ACCESS FEE LITIGATION In October 2011, plaintiffs filed a putative class action, *Mackmin, et al. v. Visa, Inc. et al.*, against Wells Fargo & Company, Wells Fargo Bank, N.A., Visa, MasterCard, and several other banks in the United States District Court for the District of Columbia. Plaintiffs allege that the Visa and MasterCard requirement that if an ATM operator charges an access fee on Visa and MasterCard transactions, then that fee cannot be greater than the access fee charged for transactions on other networks, violates antitrust rules. Plaintiffs seek treble damages, restitution, injunctive relief, and attorneys' fees where available under federal and state law. Two other antitrust cases that make similar allegations were filed in the same court, but these cases did not name Wells Fargo as a defendant. On February 13, 2013, the district court granted defendants' motions to dismiss the three actions. Plaintiffs appealed the dismissals and, on August 4, 2015, the United States Court of Appeals for the District of Columbia Circuit vacated the district court's decisions and remanded the three cases to the district court for further proceedings. On June 28, 2016, the United States Supreme Court granted defendants' petitions for writ of certiorari to review the decisions of the United States Court of Appeals for the District of Columbia. On November 17, 2016, the United States Supreme Court dismissed the petitions as improvidently granted, and the three cases returned to the district court for further proceedings. The Company has entered into an agreement pursuant to which the Company will pay \$20.8 million to resolve the cases, subject to court approval.

AUTOMOBILE LENDING MATTERS On April 20, 2018, the Company entered into consent orders with the Office of the Comptroller of the Currency (OCC) and the Consumer Financial Protection Bureau (CFPB) to resolve, among other things, investigations by the agencies into the Company's compliance risk management program and its past practices involving certain automobile collateral protection insurance (CPI) policies and certain mortgage interest rate lock extensions. The consent orders require remediation to customers and the payment of a total of \$1.0 billion in civil money penalties to the agencies. In July 2017, the Company announced a plan to remediate customers who may have been financially harmed due to issues related to automobile CPI policies purchased through a third-party vendor on their behalf. Multiple putative class actions alleging, among other things, unfair and deceptive practices relating to these CPI policies, were filed against the Company and consolidated into one multi-district litigation in the United States District Court for the Central District of California. As previously disclosed, the Company entered into a settlement to resolve the multi-district litigation. Shareholders also filed a putative securities fraud class action against the Company and its executive officers alleging material misstatements and omissions of CPI-related information in the Company's public disclosures. In January 2020, the court dismissed this action as to all defendants except the Company and a former executive officer and limited the action to two alleged misstatements. In addition, the Company is subject to a class action in the United States District Court for the Central District of California alleging that customers are entitled to refunds related to the unused portion of guaranteed automobile protection (GAP) waiver or insurance agreements between the customer and dealer and, by assignment, the lender. In June 2021, the court granted preliminary approval of an agreement pursuant to which the Company will pay \$45 million and make certain changes to its GAP refund practices in order to settle the action. Allegations related to the CPI and GAP programs are among the subjects of a shareholder derivative lawsuit pending in the United States District Court for the Northern District of California. These and other issues related to the origination, servicing, and collection of consumer auto loans, including related insurance products, have also subjected the Company to formal or informal inquiries, investigations, or examinations from federal and state government agencies, including the CFPB. As previously disclosed, the Company entered into an agreement to resolve investigations by the state attorneys general.

COMMERCIAL LENDING SHAREHOLDER LITIGATION In October and November 2020, plaintiffs filed two putative securities fraud class actions in the United States District Court for the Northern District of California alleging that the Company and certain of its former executive officers made false and misleading statements or omissions regarding, among other things, the Company's commercial lending underwriting practices, the credit quality of its commercial credit portfolios, and the value of its commercial loans, collateralized loan obligations and commercial mortgage-backed securities.

Note 13: Legal Actions (continued)

CONSENT ORDER DISCLOSURE LITIGATION Wells Fargo shareholders have brought a putative securities fraud class action in the United States District Court for the Southern District of New York alleging that the Company and certain of its current and former executive officers and directors made false or misleading statements regarding the Company's efforts to comply with the February 2018 consent order with the Federal Reserve Board and the April 2018 consent orders with the CFPB and OCC. Allegations related to the Company's efforts to comply with these three consent orders are also among the subjects of a shareholder derivative lawsuit pending in the United States District Court for the Northern District of California.

CONSUMER DEPOSIT ACCOUNT RELATED REGULATORY INVESTIGATIONS The CFPB is conducting an investigation into whether customers were unduly harmed by the Company's historical practices associated with the freezing (and, in many cases, closing) of consumer deposit accounts after the Company detected suspected fraudulent activity (by third parties or account holders) that affected those accounts. The CFPB is also investigating certain of the Company's past disclosures to customers regarding the minimum qualifying debit card usage required for customers to receive a waiver of monthly service fees on certain consumer deposit accounts.

FOREIGN EXCHANGE BUSINESS The United States Department of Justice (Department of Justice) is investigating certain activities in the Company's foreign exchange business, including whether customers may have received pricing inconsistent with commitments made to those customers. Previous investigations by other federal government agencies have been resolved.

INTERCHANGE LITIGATION Plaintiffs representing a class of merchants have filed putative class actions, and individual merchants have filed individual actions, against Wells Fargo Bank, N.A., Wells Fargo & Company, Wachovia Bank, N.A., and Wachovia Corporation regarding the interchange fees associated with Visa and MasterCard payment card transactions. Visa, MasterCard, and several other banks and bank holding companies are also named as defendants in these actions. These actions have been consolidated in the United States District Court for the Eastern District of New York. The amended and consolidated complaint asserts claims against defendants based on alleged violations of federal and state antitrust laws and seeks damages, as well as injunctive relief. Plaintiff merchants allege that Visa, MasterCard, and payment card issuing banks unlawfully colluded to set interchange rates. Plaintiffs also allege that enforcement of certain Visa and MasterCard rules and alleged tying and bundling of services offered to merchants are anticompetitive. Wells Fargo and Wachovia, along with other defendants and entities, are parties to Loss and Judgment Sharing Agreements, which provide that they, along with other entities, will share, based on a formula, in any losses from the Interchange Litigation. On July 13, 2012, Visa, MasterCard, and the financial institution defendants, including Wells Fargo, signed a memorandum of understanding with plaintiff merchants to resolve the consolidated class action and reached a separate settlement in principle of the consolidated individual actions. The settlement payments to be made by all defendants in the consolidated class and individual actions totaled approximately \$6.6 billion before reductions applicable to certain merchants opting out of the settlement. The class settlement also provided for the distribution to class merchants of 10 basis points of default interchange across all credit rate categories for a period of eight consecutive months. The district court granted final

approval of the settlement, which was appealed to the United States Court of Appeals for the Second Circuit by settlement objector merchants. Other merchants opted out of the settlement and are pursuing several individual actions. On June 30, 2016, the Second Circuit vacated the settlement agreement and reversed and remanded the consolidated action to the United States District Court for the Eastern District of New York for further proceedings. On November 23, 2016, prior class counsel filed a petition to the United States Supreme Court, seeking review of the reversal of the settlement by the Second Circuit, and the Supreme Court denied the petition on March 27, 2017. On November 30, 2016, the district court appointed lead class counsel for a damages class and an equitable relief class. The parties have entered into a settlement agreement to resolve the money damages class claims pursuant to which defendants will pay a total of approximately \$6.2 billion, which includes approximately \$5.3 billion of funds remaining from the 2012 settlement and \$900 million in additional funding. The Company's allocated responsibility for the additional funding is approximately \$94.5 million. The court granted final approval of the settlement on December 13, 2019, which was appealed to the United States Court of Appeals for the Second Circuit by settlement objector merchants. Several of the opt-out and direct action litigations have been settled while others remain pending.

LOW INCOME HOUSING TAX CREDITS Federal government agencies have undertaken formal or informal inquiries or investigations regarding the manner in which the Company purchased, and negotiated the purchase of, certain federal low income housing tax credits in connection with the financing of low income housing developments.

MORTGAGE LENDING MATTERS Plaintiffs representing a class of mortgage borrowers have filed separate putative class actions, *Hernandez v. Wells Fargo, et al.*, *Coordes v. Wells Fargo, et al.*, *Ryder v. Wells Fargo, Liguori v. Wells Fargo*, and *Dore v. Wells Fargo*, against Wells Fargo Bank, N.A., in the United States District Court for the Northern District of California, the United States District Court for the District of Washington, the United States District Court for the Southern District of Ohio, the United States District Court for the Southern District of New York, and the United States District Court for the Western District of Pennsylvania, respectively. Plaintiffs allege that Wells Fargo improperly denied mortgage loan modifications or repayment plans to customers in the foreclosure process due to the overstatement of foreclosure attorneys' fees that were included for purposes of determining whether a customer in the foreclosure process qualified for a mortgage loan modification or repayment plan. In March 2020, the Company entered into an agreement pursuant to which the Company paid \$18.5 million to resolve the claims of the initial certified class in the *Hernandez* case, which was approved by the district court in October 2020. The *Hernandez* settlement has been reopened to include additional borrowers who the Company determined should have been included in the settlement class because the Company identified a population of additional borrowers during the relevant class period whose loans had not previously been reviewed for inclusion in the original population of impacted customers. In June 2021, the Company entered into an agreement pursuant to which the Company will pay an additional approximately \$22 million to resolve the *Hernandez* case. In July 2021, the Company entered into an agreement in the *Ryder* case pursuant to which the Company will pay \$12 million to cover other impacted borrowers who were not included in the *Hernandez* case. The *Dore* and *Coordes* cases have been voluntarily dismissed. In addition, federal banking regulators and other government agencies have undertaken formal or informal

inquiries or investigations regarding these and other mortgage servicing matters.

NOMURA/NATIXIS MORTGAGE-RELATED LITIGATION In August 2014 and August 2015, Nomura Credit & Capital Inc. (Nomura) and Natixis Real Estate Holdings, LLC (Natixis) filed a total of seven third-party complaints against Wells Fargo Bank, N.A., in New York state court. In the underlying first-party actions, Nomura and Natixis have been sued for alleged breaches of representations and warranties made in connection with residential mortgage-backed securities sponsored by them. In the third-party actions, Nomura and Natixis allege that Wells Fargo, as master servicer, primary servicer or securities administrator, failed to notify Nomura and Natixis of their own breaches, failed to properly oversee the primary servicers, and failed to adhere to accepted servicing practices. Natixis additionally alleges that Wells Fargo failed to perform default oversight duties. Wells Fargo has asserted counterclaims alleging that Nomura and Natixis failed to provide Wells Fargo notice of their representation and warranty breaches.

OFAC RELATED INVESTIGATION The Company has self-identified an issue whereby certain foreign banks utilized a Wells Fargo software-based solution to conduct import/export trade-related financing transactions with countries and entities prohibited by the Office of Foreign Assets Control (OFAC) of the United States Department of the Treasury. We do not believe any funds related to these transactions flowed through accounts at Wells Fargo as a result of the aforementioned conduct. The Company has made voluntary self-disclosures to OFAC and is cooperating with an inquiry from the Department of Justice.

ORDER OF POSTING LITIGATION Plaintiffs filed a series of putative class actions against Wachovia Bank, N.A., and Wells Fargo Bank, N.A., as well as many other banks, challenging the “high to low” order in which the banks post debit card transactions to consumer deposit accounts. Most of these actions were consolidated in multi-district litigation proceedings (MDL proceedings) in the United States District Court for the Southern District of Florida. The court in the MDL proceedings has certified a class of putative plaintiffs, and Wells Fargo moved to compel arbitration of the claims of unnamed class members. The court denied the motions to compel arbitration in October 2016, and Wells Fargo appealed this decision to the United States Court of Appeals for the Eleventh Circuit. In May 2018, the Eleventh Circuit ruled in Wells Fargo’s favor and found that Wells Fargo had not waived its arbitration rights and remanded the case to the district court for further proceedings. On September 26, 2019, the district court entered an order granting Wells Fargo’s motion and dismissed the claims of unnamed class members in favor of arbitration, which was appealed by plaintiffs to the United States Court of Appeals for the Eleventh Circuit. In April 2021, the Eleventh Circuit upheld the district court’s decision.

RETAIL SALES PRACTICES MATTERS A number of bodies or entities, including (a) federal, state, and local government agencies, including the Department of Justice, the United States Securities and Exchange Commission (SEC), and the United States Department of Labor, (b) state attorneys general, including the New York Attorney General, and (c) Congressional committees, have undertaken formal or informal inquiries, investigations, or examinations arising out of certain retail sales practices of the Company that were the subject of settlements with the CFPB, the OCC, and the Office of the Los Angeles City

Attorney announced by the Company on September 8, 2016. The Company has responded to requests from certain of the foregoing. As previously disclosed, the Company entered into agreements to resolve the state attorneys general investigations. On February 21, 2020, the Company entered into an agreement with the Department of Justice to resolve the Department of Justice’s criminal investigation into the Company’s retail sales practices, as well as a separate agreement to resolve the Department of Justice’s civil investigation. As part of the Department of Justice criminal settlement, no charges will be filed against the Company provided the Company abides by all the terms of the agreement. The Department of Justice criminal settlement also includes the Company’s agreement that the facts set forth in the settlement document constitute sufficient facts for the finding of criminal violations of statutes regarding bank records and personal information. On February 21, 2020, the Company also entered into an order to resolve the SEC’s investigation arising out of the Company’s retail sales practices. The SEC order contains a finding, to which the Company consented, that the facts set forth include violations of Section 10(b) of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder. As part of the resolution of the Department of Justice and SEC investigations, the Company made payments totaling \$3.0 billion. In addition, as part of the settlements and included in the \$3.0 billion amount, the Company agreed to the creation of a \$500 million Fair Fund for the benefit of investors who were harmed by the conduct covered in the SEC settlement. In addition, a number of lawsuits were filed by non-governmental parties seeking damages or other remedies related to these retail sales practices. As previously disclosed, the Company entered into various settlements to resolve these lawsuits.

RMBS TRUSTEE LITIGATION In December 2014, Phoenix Light SF Limited and certain related entities and the National Credit Union Administration (NCUA) filed complaints in the United States District Court for the Southern District of New York against Wells Fargo Bank, N.A., alleging claims against the Company in its capacity as trustee for a number of residential mortgage-backed securities trusts. Complaints raising similar allegations have been filed by Commerzbank AG in the Southern District of New York and by IKB International and IKB Deutsche Industriebank in New York state court. In each case, the plaintiffs allege that Wells Fargo Bank, N.A., as trustee, caused losses to investors, and plaintiffs assert causes of action based upon, among other things, the trustee’s alleged failure to notify and enforce repurchase obligations of mortgage loan sellers for purported breaches of representations and warranties, notify investors of alleged events of default, and abide by appropriate standards of care following alleged events of default. The Company previously settled two class actions with similar allegations that were filed in November 2014 and December 2016 by institutional investors in the Southern District of New York and New York state court, respectively. In March 2021, the Company entered into an agreement to resolve the case filed by the NCUA.

SEMINOLE TRIBE TRUSTEE LITIGATION The Seminole Tribe of Florida filed a complaint in Florida state court alleging that Wells Fargo, as trustee, charged excess fees in connection with the administration of a minor’s trust and failed to invest the assets of the trust prudently. The complaint was later amended to include three individual current and former beneficiaries as plaintiffs and to remove the Tribe as a party to the case. In December 2016, the Company filed a motion to dismiss the amended complaint on the grounds that the Tribe is a necessary party and that the individual beneficiaries lack standing to bring

Note 13: Legal Actions (continued)

claims. The motion was denied in June 2018. The case is pending trial.

OUTLOOK As described above, the Company establishes accruals for legal actions when potential losses associated with the actions become probable and the costs can be reasonably estimated. The high end of the range of reasonably possible potential losses in excess of the Company's accrual for probable and estimable losses was approximately \$2.8 billion as of June 30, 2021. The outcomes of legal actions are unpredictable and subject to significant uncertainties, and it is inherently difficult to determine whether any loss is probable or even possible. It is also inherently difficult to estimate the amount of any loss and there may be matters for which a loss is probable or reasonably possible but not currently estimable. Accordingly, actual losses may be in excess of the established accrual or the range of reasonably possible loss. Based on information currently available, advice of counsel, available insurance coverage, and established reserves, Wells Fargo believes that the eventual outcome of the actions against Wells Fargo and/or its subsidiaries will not, individually or in the aggregate, have a material adverse effect on Wells Fargo's consolidated financial condition. However, it is possible that the ultimate resolution of a matter, if unfavorable, may be material to Wells Fargo's results of operations for any particular period.

Note 14: Derivatives

We use derivatives to manage exposure to market risk, including interest rate risk, credit risk and foreign currency risk, and to assist customers with their risk management objectives. We designate certain derivatives as hedging instruments in qualifying hedge accounting relationships (fair value or cash flow hedges). Our remaining derivatives consist of economic hedges that do not qualify for hedge accounting and derivatives held for customer accommodation trading or other purposes. For additional information on our derivative activities, see Note 16 (Derivatives) in our 2020 Form 10-K.

Table 14.1 presents the total notional or contractual amounts and fair values for our derivatives. Derivative transactions can be measured in terms of the notional amount, but this amount is not recorded on our consolidated balance sheet and is not, when viewed in isolation, a meaningful measure of the risk profile of the instruments. The notional amount is generally not exchanged, but is used only as the basis on which interest and other payments are determined.

Table 14.1: Notional or Contractual Amounts and Fair Values of Derivatives

(in millions)	June 30, 2021			December 31, 2020		
	Notional or contractual amount	Derivative assets	Fair value Derivative liabilities	Notional or contractual amount	Derivative assets	Fair value Derivative liabilities

Table 14.2 provides information on the gross fair values of derivative assets and liabilities, the balance sheet netting adjustments and the resulting net fair value amount recorded on our consolidated balance sheet, as well as the non-cash collateral associated with such arrangements. We execute substantially all of our derivative transactions under master netting arrangements and reflect all derivative balances and related cash collateral subject to enforceable master netting arrangements on a net basis within the consolidated balance sheet. The “Gross amounts recognized” column in the following table includes \$52.9 billion and \$44.7 billion of gross derivative assets and liabilities, respectively, at June 30, 2021, and \$54.6 billion and \$50.1 billion, respectively, at December 31, 2020, with counterparties subject to enforceable master netting arrangements that are eligible for balance sheet netting adjustments. The majority of these amounts are interest rate contracts executed in over-the-counter (OTC) markets. The remaining gross derivative assets and liabilities of \$8.1 billion and \$5.0 billion, respectively, at June 30, 2021, and \$11.1 billion

and \$8.0 billion, respectively, at December 31, 2020, include those with counterparties subject to master netting arrangements for which we have not assessed the enforceability because they are with counterparties where we do not currently have positions to offset, those subject to master netting arrangements where we have not been able to confirm the enforceability and those not subject to master netting arrangements. As such, we do not net derivative balances or collateral within the consolidated balance sheet for these counterparties. Cash collateral receivables and payables that have not been offset against our derivatives were \$2.6 billion and \$828 million, respectively, at June 30, 2021, and \$1.8 billion and \$984 million, respectively, at December 31, 2020.

We determine the balance sheet netting adjustments based on the terms specified within each master netting arrangement. We disclose the balance sheet netting amounts within the column titled “Gross amounts offset in consolidated balance sheet.” Balance sheet netting adjustments are determined at the counterparty level for which there may be multiple contract

Note 14: Derivatives (continued)

types. For disclosure purposes, we allocate these netting adjustments to the contract type for each counterparty proportionally based upon the “Gross amounts recognized” by counterparty. As a result, the net amounts disclosed by contract type may not represent the actual exposure upon settlement of the contracts.

We do not net non-cash collateral that we receive and pledge on our consolidated balance sheet. For disclosure purposes, we present the fair value of this non-cash collateral in the column titled “Gross amounts not offset in consolidated balance sheet (Disclosure-only netting)” within the table. We determine and allocate the Disclosure-only netting amounts in the same manner as balance sheet netting amounts.

The “Net amounts” column within Table 14.2 represents the aggregate of our net exposure to each counterparty after

considering the balance sheet and Disclosure-only netting adjustments. We manage derivative exposure by monitoring the credit risk associated with each counterparty using counterparty-specific credit risk limits, using master netting arrangements and obtaining collateral. Derivative contracts executed in OTC markets include bilateral contractual arrangements that are not cleared through a central clearing organization but are typically subject to master netting arrangements. The proportion of these derivative contracts relative to our total derivative assets and liabilities are presented in the “Percent exchanged in over-the-counter market” column in Table 14.2. In addition to the netting amounts included in the table, we also have balance sheet netting related to resale and repurchase agreements that are disclosed within Note 12 (Pledged Assets and Collateral).

Table 14.2: Gross Fair Values of Derivative Assets and Liabilities

(in millions)	Gross amounts recognized	Gross amounts offset in consolidated balance sheet (1)	Net amounts in consolidated balance sheet	Gross amounts not offset in consolidated balance sheet (Disclosure-only netting)	Net amounts	Percent exchanged in over-the-counter market

(1) Represents amounts with counterparties subject to enforceable master netting arrangements that have been offset in the consolidated balance sheet, including related cash collateral and portfolio level counterparty valuation adjustments. Counterparty valuation adjustments related to derivative assets were \$299 million and \$399 million and debit valuation adjustments related to derivative liabilities were \$145 million and \$201 million as of June 30, 2021, and December 31, 2020, respectively. Cash collateral totaled \$5.4 billion and \$5.1 billion, netted against derivative assets and liabilities, respectively, at June 30, 2021, and \$5.5 billion and \$7.5 billion, respectively, at December 31, 2020.

Fair Value and Cash Flow Hedges

For fair value hedges, we use interest rate swaps to convert certain of our fixed-rate long-term debt and time certificates of deposit to floating rates to hedge our exposure to interest rate risk. We also enter into cross-currency swaps, cross-currency interest rate swaps and forward contracts to hedge our exposure to foreign currency risk and interest rate risk associated with the issuance of non-U.S. dollar denominated long-term debt. In addition, we use interest rate swaps, cross-currency swaps, cross-currency interest rate swaps and forward contracts to hedge against changes in fair value of certain investments in available-for-sale debt securities due to changes in interest rates, foreign currency rates, or both. For certain fair value hedges of foreign currency risk, changes in fair value of cross-currency swaps attributable to changes in cross-currency basis spreads are excluded from the assessment of hedge effectiveness and recorded in other comprehensive income. See Note 21 (Other Comprehensive Income) for the amounts recognized in other comprehensive income.

For cash flow hedges, we use interest rate swaps to hedge the variability in interest payments received on certain floating-

rate commercial loans and paid on certain floating-rate debt due to changes in the contractually specified interest rate. We also use cross-currency swaps to hedge variability in interest payments on fixed-rate foreign currency-denominated long-term debt due to changes in foreign exchange rates.

We estimate \$76 million pre-tax of deferred net losses related to cash flow hedges in OCI at June 30, 2021, will be reclassified into net interest income during the next twelve months. The deferred losses expected to be reclassified into net interest income are predominantly related to discontinued hedges of floating rate loans. For cash flow hedges as of June 30, 2021, we are hedging our foreign currency exposure to the variability of future cash flows for all forecasted transactions for a maximum of 9 years. For additional information on our accounting hedges, see Note 1 (Summary of Significant Accounting Policies).

Table 14.3 and Table 14.4 show the net gains (losses) related to derivatives in fair value and cash flow hedging relationships, respectively.

Deposits	(14,206)	(295)	—	—
Long-term debt	(148,673)	(7,312)	(5,248)	2
December 31, 2020				
Available-for-sale debt securities (5)	\$ 29,538	827	17,091	1,111
Deposits	(22,384)	(477)	—	—
Long-term debt	(156,907)	(12,466)	(14,468)	31

- (1) Represents hedged items no longer designated in qualifying fair value hedging relationships for which an associated basis adjustment exists at the balance sheet date.
- (2) Does not include the carrying amount of hedged items where only foreign currency risk is the designated hedged risk. The carrying amount excluded for debt securities is \$12.0 billion and for long-term debt is \$(2.8) billion as of June 30, 2021, and \$17.6 billion for debt securities and \$(4.7) billion for long-term debt as of December 31, 2020.
- (3) The balance includes \$188 million and \$160 million of debt securities and long-term debt cumulative basis adjustments as of June 30, 2021, respectively, and \$205 million and \$130 million of debt securities and long-term debt cumulative basis adjustments as of December 31, 2020, respectively, on terminated hedges whereby the hedged items have subsequently been re-designated into existing hedges.
- (4) Represents the full carrying amount of the hedged asset or liability item as of the balance sheet date, except for circumstances in which only a portion of the asset or liability was designated as the hedged item in which case only the portion designated is presented.
- (5) Carrying amount represents the amortized cost.

Derivatives Not Designated as Hedging Instruments

Derivatives not designated as hedging instruments include economic hedges and derivatives entered into for customer accommodation trading purposes.

We use economic hedge derivatives to manage our exposure to interest rate risk, equity price risk, foreign currency risk, and credit risk. We also use economic hedge derivatives to mitigate the periodic earnings volatility caused by mismatches between the changes in fair value of the hedged item and hedging instrument recognized on our fair value accounting hedges. In second quarter 2020, we entered into arrangements to

transition the economic hedges of our deferred compensation plan liabilities from equity securities to derivative instruments. Changes in the fair values of derivatives used to economically hedge the deferred compensation plan are reported in personnel expense.

For additional information on economic hedges and other derivatives, see Note 14 (Derivatives) to Financial Statements in our 2020 Form 10-K.

Table 14.6 shows the net gains (losses), recognized by income statement lines, related to derivatives not designated as hedging instruments.

(1) Mortgage banking amounts for the second quarter and first half of 2021 are comprised of gains (losses) of \$707 million and \$(933) million, respectively, related to derivatives used as economic hedges of MSRs measured at fair value offset by gains (losses) of \$(420) million and \$845 million related to derivatives used as economic hedges of mortgage loans held for sale and derivative loan commitments. The corresponding amounts for the second quarter and first half of 2020 are comprised of gains (losses) of \$535 million and \$3.9 billion offset by gains (losses) of \$(393) million and \$(1.3) billion, respectively.

Credit Derivatives

Credit derivative contracts are arrangements whose value is derived from the transfer of credit risk of a reference asset or entity from one party (the purchaser of credit protection) to another party (the seller of credit protection). We use credit derivatives to assist customers with their risk management objectives. We may also use credit derivatives in structured product transactions or liquidity agreements written to special purpose vehicles. The maximum exposure of sold credit derivatives is managed through posted collateral, purchased credit derivatives and similar products in order to achieve our desired credit risk profile. This credit risk management provides an ability to recover a significant portion of any amounts that

would be paid under sold credit derivatives. We would be required to perform under the sold credit derivatives in the event of default by the referenced obligors. Events of default include events such as bankruptcy, capital restructuring or lack of principal and/or interest payment. In certain cases, other triggers may exist, such as the credit downgrade of the referenced obligors or the inability of the special purpose vehicle for which we have provided liquidity to obtain funding.

Table 14.7 provides details of sold and purchased credit derivatives.

Table 14.7: Sold and Purchased Credit Derivatives

(in millions)	Fair value asset	Fair value liability	Notional amount					Range of maturities

Protection sold represents the estimated maximum exposure to loss that would be incurred under an assumed hypothetical circumstance, where the value of our interests and any associated collateral declines to zero, without any consideration of recovery or offset from any economic hedges. We believe this hypothetical circumstance to be an extremely remote possibility and accordingly, this required disclosure is not an indication of expected loss. The amounts under non-investment grade represent the notional amounts of those credit derivatives on which we have a higher risk of being required to perform under the terms of the credit derivative and are a function of the underlying assets.

We consider the risk of performance to be high if the underlying assets under the credit derivative have an external rating that is below investment grade or an internal credit default grade that is equivalent thereto. We believe the net protection sold, which is representative of the net notional amount of protection sold and purchased with identical underlyings, in combination with other protection purchased, is more representative of our exposure to loss than either non-investment grade or protection sold. Other protection purchased represents additional protection, which may offset the exposure to loss for protection sold, that was not purchased with an identical underlying of the protection sold.

Credit-Risk Contingent Features

Certain of our derivative contracts contain provisions whereby if the credit rating of our debt were to be downgraded by certain major credit rating agencies, the counterparty could demand additional collateral or require termination or replacement of derivative instruments in a net liability position. Table 14.8 illustrates our exposure to OTC bilateral derivative contracts with credit-risk contingent features, collateral we have posted, and the additional collateral we would be required to post if the credit rating of our debt was downgraded below investment grade.

Table 14.8: Credit-Risk Contingent Features

(in billions)	Jun 30, 2021	Dec 31, 2020
Net derivative liabilities with credit-risk contingent features	\$ 10.4	10.5
Collateral posted	9.4	9.0
Additional collateral to be posted upon a below investment grade credit rating (1)	1.0	1.5

(1) Any credit rating below investment grade requires us to post the maximum amount of collateral.

Note 15: Fair Values of Assets and Liabilities

We use fair value measurements to record fair value adjustments to certain assets and liabilities and to determine fair value disclosures. Assets and liabilities recorded at fair value on a recurring basis, such as derivatives, residential MSRs, and trading or AFS debt securities, are presented in Table 15.1 in this Note. Additionally, from time to time, we record fair value adjustments on a nonrecurring basis. These nonrecurring adjustments typically involve application of lower of cost or fair value (LOCOM) accounting, write-downs of individual assets or application of the measurement alternative for nonmarketable equity securities. Assets recorded at fair value on a nonrecurring basis are presented in Table 15.4 in this Note. We provide in Table 15.8 estimates of fair value for financial instruments that are not recorded at fair value, such as loans and debt liabilities carried at amortized cost.

See Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K for discussion of how we determine fair value. For descriptions of the valuation methodologies we use for assets and liabilities recorded at fair value on a recurring or nonrecurring basis, see Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K.

FAIR VALUE HIERARCHY We classify our assets and liabilities recorded at fair value as either Level 1, 2, or 3 in the fair value hierarchy. The highest priority (Level 1) is assigned to valuations based on unadjusted quoted prices in active markets and the lowest priority (Level 3) is assigned to valuations based on significant unobservable inputs. See Note 1 (Summary of Significant Accounting Policies) in our 2020 Form 10-K for a detailed description of the fair value hierarchy.

In the determination of the classification of financial instruments in Level 2 or Level 3 of the fair value hierarchy, we consider all available information, including observable market data, indications of market liquidity and orderliness, and our understanding of the valuation techniques and significant inputs used. This determination is ultimately based upon the specific facts and circumstances of each instrument or instrument category and judgments are made regarding the significance of the unobservable inputs to the instruments' fair value measurement in its entirety. If unobservable inputs are considered significant, the instrument is classified as Level 3.

We do not classify nonmarketable equity securities in the fair value hierarchy if we use the non-published net asset value (NAV) per share (or its equivalent) as a practical expedient to measure fair value. Marketable equity securities with published NAVs are classified in the fair value hierarchy.

Assets and Liabilities Recorded at Fair Value on a Recurring Basis

Table 15.1 presents the balances of assets and liabilities recorded at fair value on a recurring basis.

Table 15.1: Fair Value on a Recurring Basis

- (1) Includes net gains (losses) included in both net income and other comprehensive income. All amounts represent net gains (losses) included in net income except for \$22 million and \$36 million included in other comprehensive income from available-for-sale debt securities in the second quarter and first half of 2021, respectively. The corresponding amounts for the second quarter and first half of 2020 were \$16 million and \$(75) million, respectively.
- (2) Includes originations of mortgage servicing rights and loans held for sale.
- (3) All assets and liabilities transferred into Level 3 were previously classified within Level 2.
- (4) All assets and liabilities transferred out of Level 3 are classified as Level 2.
- (5) Includes net unrealized gains (losses) related to assets and liabilities held at period end included in both net income and other comprehensive income. All amounts represent net unrealized gains (losses) included in net income except for \$38 million and \$31 million included in other comprehensive income from available-for-sale debt securities in the second quarter and first half of 2021, respectively. The corresponding amounts for the second quarter and first half of 2020 were \$13 million and \$(40) million, respectively.
- (6) Included in net gains on trading and securities in the consolidated statement of income.
- (7) Included in mortgage banking income in the consolidated statement of income.
- (8) For additional information on the changes in mortgage servicing rights, see Note 9 (Mortgage Banking Activities).
- (9) Included in mortgage banking income, net gains on trading and securities, and other noninterest income in the consolidated statement of income.

Table 15.3 provides quantitative information about the valuation techniques and significant unobservable inputs used in the valuation of our Level 3 assets and liabilities measured at fair value on a recurring basis.

The significant unobservable inputs for Level 3 assets inherent in the fair values obtained from third-party vendors are not included in the table, as the specific inputs applied are not

provided by the vendor (for additional information on vendor-developed valuations, see Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K).

Weighted averages of inputs are calculated using outstanding unpaid principal balance for cash instruments, such as loans and securities, and notional amounts for derivative instruments.

Table 15.3: Valuation Techniques – Recurring Basis

(\$ in millions, except cost to service amounts)	Fair Value Level 3	Valuation Technique	Significant Unobservable Input	Range of Inputs	Weighted Average

Insignificant Level 3 assets, net of liabilities 44					
Total Level 3 assets, net of liabilities	\$ 19,930 (3)				

(1) The high end of the range of inputs is for servicing modified loans. For non-modified loans the range is \$57 - \$239 at June 30, 2021, and \$63 - \$252 at December 31, 2020.

(2) Includes a blend of prepayment speeds and expected defaults. Prepayment speeds are influenced by mortgage interest rates as well as our estimation of drivers of borrower behavior.

(3) Consists of total Level 3 assets of \$22.8 billion and \$21.9 billion and total Level 3 liabilities of \$2.5 billion and \$2.0 billion, before netting of derivative balances, at June 30, 2021, and December 31, 2020, respectively.

Note 15: Fair Values of Assets and Liabilities (continued)

For additional information on the valuation techniques and significant unobservable inputs used in the valuation of our Level 3 assets and liabilities, including how changes in these inputs affect fair value estimates, see Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K.

Assets and Liabilities Recorded at Fair Value on a Nonrecurring Basis

We may be required, from time to time, to measure certain assets at fair value on a nonrecurring basis in accordance with GAAP. These adjustments to fair value usually result from application of LOCOM accounting, write-downs of individual

assets, or application of the measurement alternative for nonmarketable equity securities.

Table 15.4 provides the fair value hierarchy and fair value at the date of the nonrecurring fair value adjustment for all assets that were still held as of June 30, 2021, and December 31, 2020, and for which a nonrecurring fair value adjustment was recorded during the six months ended June 30, 2021, and year ended December 31, 2020.

Table 15.5 presents the increase (decrease) in value of certain assets held at the end of the respective reporting periods presented for which a nonrecurring fair value adjustment was recognized during the periods presented.

Table 15.4: Fair Value on a Nonrecurring Basis

(in millions)	June 30, 2021			December 31, 2020		
	Level 2	Level 3	Total	Level 2	Level 3	Total
Loans held for sale (1)	2,956	1,439	4,395	2,672	2,945	5,617
Loans:						
Commercial	432	—	432	1,385	—	1,385
Consumer	221	—	221	395	—	395
Total loans	653	—	653	1,780	—	1,780
Mortgage servicing rights (commercial)	—	567	567	—	510	510
Nonmarketable equity securities	3,882	85	3,967	2,397	790	3,187
Other assets	976	157	1,133	1,350	428	1,778
Total assets at fair value on a nonrecurring basis	\$ 8,467	2,248	10,715	8,199	4,673	12,872

(1) Predominantly consists of commercial mortgages and residential mortgage – first lien loans.

Nonmarketable equity securities includes impairment on private equity and venture capital investments and gains or losses under the measurement alternative. Other assets includes impairments of operating lease ROU assets, valuation losses on foreclosed real estate and other collateral owned, and impairment on private equity and venture capital investments in consolidated portfolio companies.

Nonmarketable equity securities	2,215	(410)
Other assets	(56)	(394)
Total	\$ 1,956	(1,431)

Table 15.6 provides quantitative information about the valuation techniques and significant unobservable inputs used in the valuation of our Level 3 assets that are measured at fair value on a nonrecurring basis and determined using an internal model. The table is limited to financial instruments that had nonrecurring fair value adjustments during the periods presented. Weighted averages of inputs are calculated using outstanding unpaid principal balance for cash instruments, such as loans, and carrying value prior to the nonrecurring fair value measurement for nonmarketable equity securities.

Table 15.6: Valuation Techniques – Nonrecurring Basis

(\$ in millions)	Fair Value Level 3	Valuation Technique (1)	Significant Unobservable Input (1)	Range of Inputs Positive (Negative)	Weighted Average
June 30, 2021

			Crude oil prices (\$/barrel)	\$ 42 - 48	47
			Natural gas prices (\$/MMBtu)	2 - 2	2
Insignificant Level 3 assets	19				
Total	\$ 4,673				

- (1) See Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K for additional information on the valuation technique(s) and significant unobservable inputs used in the valuation of Level 3 assets.
- (2) Consists of approximately \$1.2 billion and \$2.6 billion of government insured/guaranteed loans purchased from GNMA-guaranteed mortgage securitizations at June 30, 2021, and December 31, 2020, respectively, and approximately \$200 million and \$300 million of other mortgage loans that are not government insured/guaranteed at June 30, 2021, and December 31, 2020.
- (3) Applies only to non-government insured/guaranteed loans.
- (4) Includes the impact on prepayment rate of expected defaults for government insured/guaranteed loans, which impact the frequency and timing of early resolution of loans.
- (5) Includes \$417 million of private equity and venture capital investments in consolidated portfolio companies classified in other assets on the consolidated balance sheet at December 31, 2020.

Fair Value Option

The fair value option is an irrevocable election, generally only permitted upon initial recognition of financial assets or liabilities, to measure eligible financial instruments at fair value with changes in fair value reflected in earnings. We may elect the fair value option to align the measurement model with how the financial assets or liabilities are managed or to reduce complexity or accounting asymmetry. Following is a discussion of the portfolios for which we elected the fair value option. For additional information, including the basis for our fair value

option elections, see Note 17 (Fair Values of Assets and Liabilities) in our 2020 Form 10-K.

Table 15.7 reflects differences between the fair value carrying amount of the assets for which we have elected the fair value option and the contractual aggregate unpaid principal amount at maturity. Nonaccrual loans and loans 90 days or more past due and still accruing included in LHFS for which we have elected the fair value option were insignificant at June 30, 2021, and December 31, 2020.

Table 15.7: Fair Value Option

(in millions)	June 30, 2021			December 31, 2020		
	Fair value carrying amount	Aggregate unpaid principal	Fair value carrying amount less aggregate unpaid principal	Fair value carrying amount	Aggregate unpaid principal	Fair value carrying amount less aggregate unpaid principal
Loans held for sale	\$ 18,894	18,526	368	18,806	18,217	589

Note 15: Fair Values of Assets and Liabilities (continued)

The changes in fair value related to initial measurement and subsequent changes in fair value included in earnings for LHFS accounted for under the fair value option were \$823 million and \$1.2 billion in the second quarter and first half of 2021, respectively, and \$773 million and \$1.1 billion in the second quarter and first half of 2020, respectively. Substantially all of these amounts were included in the mortgage banking noninterest income line of the consolidated statement of income. For performing loans, instrument-specific credit risk gains or losses were derived principally by determining the change in fair value of the loans due to changes in the observable or implied credit spread. Credit spread is the market yield on the loans less the relevant risk-free benchmark interest rate. For nonperforming loans, we attribute all changes in fair value to instrument-specific credit risk. Gains and losses attributable to instrument-specific credit risk related to assets accounted for under the fair value option in the second quarter and first half of both 2021 and 2020 were insignificant.

Disclosures about Fair Value of Financial Instruments

Table 15.8 presents a summary of fair value estimates for financial instruments that are not carried at fair value on a recurring basis. Some financial instruments are excluded from the scope of this table, such as certain insurance contracts, certain nonmarketable equity securities, and leases. This table also excludes assets and liabilities that are not financial instruments such as the value of the long-term relationships with our deposit, credit card and trust customers, MSRs, premises and equipment, goodwill and deferred taxes.

Loan commitments, standby letters of credit and commercial and similar letters of credit are not included in Table 15.8. A reasonable estimate of the fair value of these instruments is the carrying value of deferred fees plus the allowance for unfunded credit commitments, which totaled \$1.4 billion and at both June 30, 2021, and December 31, 2020, respectively.

The total of the fair value calculations presented does not represent, and should not be construed to represent, the underlying fair value of the Company.

Table 15.8: Fair Value Estimates for Financial Instruments

Total financial liabilities	\$ 324,728	—	311,641	21,321	—	332,962

(1) Amounts consist of financial instruments for which carrying value approximates fair value.

(2) Excludes lease financing with a carrying amount of \$15.2 billion and \$15.4 billion at June 30, 2021, and December 31, 2020, respectively.

(3) Excludes deposit liabilities with no defined or contractual maturity of \$1.4 trillion at both June 30, 2021, and December 31, 2020, respectively.

(4) Excludes capital lease obligations under capital leases of \$28 million at both June 30, 2021, and December 31, 2020, respectively.

Note 16: Preferred Stock

We are authorized to issue 20 million shares of preferred stock and 4 million shares of preference stock, both without par value. Preferred shares outstanding rank senior to common shares both as to dividends and liquidation preference but have no general voting rights. We have not issued any preference shares under this authorization. If issued, preference shares would be limited to one vote per share. Our total authorized, issued and outstanding preferred stock is presented in the following two tables along with the Employee Stock Ownership Plan (ESOP) Cumulative Convertible Preferred Stock.

In January 2021, we issued \$3.5 billion of our Preferred Stock, Series BB, and in February 2021, we issued \$1.05 billion of our Preferred Stock, Series CC. In March 2021, we redeemed our Preferred Stock Series I, Series P and Series W, and partially redeemed our Preferred Stock, Series N, for an aggregate cost of \$4.5 billion. In June 2021, we redeemed the remaining outstanding shares of our Preferred Stock, Series N, for a cost of \$350 million. In July 2021, we issued \$1.25 billion of our Preferred Stock, Series DD.

- Series I preferred stock issuance relates to trust preferred securities. See Note 8 (Securitizations and Variable Interest Entities) for additional information. This issuance has a floating interest rate that is the greater of three-month London Interbank Offered Rate (LIBOR) plus 0.93% and 5.56975%. In first quarter 2021, Preferred Stock, Series I, was redeemed.
- Preferred Stock, Series L, may be converted at any time, at the option of the holder, into 6.3814 shares of our common stock, plus cash in lieu of fractional shares, subject to anti-dilution adjustments.
- In first quarter 2021, 16,000 shares of Preferred Stock, Series N, were redeemed and Preferred Stock, Series P and Series W were fully redeemed; in second quarter 2021, the remaining 14,000 shares of Preferred Stock, Series N, were redeemed.
- See the "ESOP Cumulative Convertible Preferred Stock" section in this Note for additional information about the liquidation preference for the ESOP Cumulative Convertible Preferred Stock.

- (1) Floating rate for Preferred Stock, Series I, is the greater of three-month London Interbank Offered Rate (LIBOR) plus 0.93% and 5.56975%. In first quarter 2021, Preferred Stock, Series I, was redeemed.
- (2) Preferred Stock, Series L, may be converted at any time, at the option of the holder, into 6.3814 shares of our common stock, plus cash in lieu of fractional shares, subject to anti-dilution adjustments.
- (3) In first quarter 2021, \$400 million of Preferred Stock, Series N, was redeemed and Preferred Stock, Series P and Series W were fully redeemed; in second quarter 2021, the remaining \$350 million of Preferred Stock, Series N, was redeemed.
- (4) See the "ESOP Cumulative Convertible Preferred Stock" section in this Note for additional information about the liquidation preference for the ESOP Cumulative Convertible Preferred Stock.

ESOP CUMULATIVE CONVERTIBLE PREFERRED STOCK All shares of our ESOP Cumulative Convertible Preferred Stock (ESOP Preferred Stock) were issued to a trustee acting on behalf of the Wells Fargo & Company 401(k) Plan (the 401(k) Plan). Dividends on the ESOP Preferred Stock are cumulative from the date of initial issuance and are payable quarterly at annual rates based upon the year of issuance. Each share of ESOP Preferred Stock released from the unallocated reserve of the 401(k) Plan is converted into shares of our common stock based on the stated

value of the ESOP Preferred Stock and the then current market price of our common stock. The ESOP Preferred Stock is also convertible at the option of the holder at any time, unless previously redeemed. We have the option to redeem the ESOP Preferred Stock at any time, in whole or in part, at a redemption price per share equal to the higher of (a) \$1,000 per share plus accrued and unpaid dividends or (b) the fair market value, as defined in the Certificates of Designation for the ESOP Preferred Stock.

Total ESOP Preferred Stock (1)	822,242	822,242	\$ 822	822		
Unearned ESOP shares (2)			\$ (875)	(875)		

(1) At both June 30, 2021, and December 31, 2020, additional paid-in capital included \$53 million related to ESOP preferred stock.

(2) We recorded a corresponding charge to unearned ESOP shares in connection with the issuance of the ESOP Preferred Stock. The unearned ESOP shares are reduced as shares of the ESOP Preferred Stock are committed to be released.

Note 17: Revenue from Contracts with Customers

Our revenue includes net interest income on financial instruments and noninterest income. Table 17.1 presents our revenue by operating segment. For additional description of our

operating segments, including additional financial information and the underlying management accounting process, see Note 22 (Operating Segments).

- (1) Taxable-equivalent adjustments related to tax-exempt income on certain loans and debt securities are included in net interest income, while taxable-equivalent adjustments related to income tax credits for low-income housing and renewable energy investments are included in noninterest income, in each case with corresponding impacts to income tax expense (benefit). Adjustments are included in Corporate, Commercial Banking, and Corporate and Investment Banking and are eliminated to reconcile to the Company's consolidated financial results.
- (2) These revenues are related to financial assets and liabilities, including loans, leases, securities and derivatives, with additional details included in other footnotes to our financial statements.
- (3) We earned trailing commissions of \$300 million and \$598 million for the second quarter and first half of 2021, respectively, and \$257 million and \$532 million for the second quarter and first half of 2020, respectively.
- (4) The cost of credit card rewards and rebates of \$373 million and \$683 million for the second quarter and first half of 2021, respectively, and \$266 million and \$651 million for the second quarter and first half of 2020, respectively, are presented net against the related revenues.

INVESTMENT ADVISORY AND OTHER ASSET-BASED FEES are earned for providing brokerage advisory, asset management and trust services.

Fees from advisory account relationships with brokerage customers are charged based on a percentage of the market value of the client's assets. Services and obligations related to providing investment advice, active management of client assets, and assistance with selecting and engaging a third-party advisory manager are generally satisfied over a month or quarter. Trailing commissions are earned for selling shares to investors and our obligation is satisfied at the time shares are sold. However, these fees are received and recognized over time during the period the customer owns the shares and we remain the broker of record. The amount of trailing commissions is variable based on the length of time the customer holds the shares and on changes in the value of the underlying assets.

Asset management services include managing and administering assets, including mutual funds, and institutional separate accounts. Fees for these services are generally determined based on a tiered scale relative to the market value of assets under management (AUM). In addition to AUM, we have client assets under administration (AUA) that earn various administrative fees which are generally based on the extent of the services provided to administer the account. Services with AUM and AUA-based fees are generally satisfied over time.

Trust services include acting as a trustee or agent for corporate trust, personal trust, and agency assets. Obligations for trust services are generally satisfied over time; however, obligations for activities that are transitional in nature are satisfied at the time of the transaction.

COMMISSIONS AND BROKERAGE SERVICES FEES are earned for providing brokerage services.

Commissions from transactional accounts with brokerage customers are earned for executing transactions at the client's direction. Our obligation is generally satisfied upon the execution of the transaction and the fees are based on the size and number of transactions executed.

Fees earned from other brokerage services include securities clearance, omnibus and networking fees received from mutual fund companies in return for providing record keeping and other administrative services, and annual account maintenance fees charged to customers. Our obligation is satisfied at the time we provide the service which is generally at the time of the transaction.

For a description of our other revenues, see Note 20 (Revenue from Contracts with Customers) in our 2020 Form 10-K.

Note 18: Employee Benefits and Other Expenses

Pension and Postretirement Plans

We sponsor a frozen noncontributory qualified defined benefit retirement plan, the Wells Fargo & Company Cash Balance Plan (Cash Balance Plan), which covers eligible employees of Wells Fargo. The Cash Balance Plan was frozen on July 1, 2009, and no new benefits accrue after that date. For additional information on our pension and postretirement plans, including plan assumptions, investment strategy and asset allocation, projected benefit payments, and valuation methodologies used for assets measured at fair value, see Note 21 (Employee Benefits and Other Expenses) in our 2020 Form 10-K.

We recognize settlement losses for our Cash Balance Plan based on an assessment of whether lump sum benefit payments will, in aggregate for the year, exceed the sum of its annual service and interest cost (threshold). Settlement losses of \$62 million and \$70 million were recognized during second quarter 2021 and 2020, respectively, representing the pro rata portion of the net loss in cumulative other comprehensive income based on the percentage reduction in the Cash Balance

Plan's projected benefit obligation attributable to lump sum benefit payments during the first half of both 2021 and 2020. As a result of the settlement losses, we re-measured the Cash Balance Plan obligation and plan assets as of both June 30, 2021 and 2020, and used a discount rate of 2.80% and 2.75%, respectively, based on our consistent methodology of determining our discount rate using a yield curve with maturity dates that closely match the estimated timing of the expected benefit payments. The result of the settlement losses and remeasurement increased the Cash Balance Plan asset by \$347 million and other comprehensive income (pre-tax) by \$409 million in second quarter 2021, and increased the Cash Balance Plan liability by \$674 million and decreased other comprehensive income (pre-tax) by \$604 million in second quarter 2020.

Table 18.1 presents the components of net periodic benefit cost. Service cost is reported in personnel expense and all other components of net periodic benefit cost are reported in other noninterest expense on the consolidated statement of income.

Table 18.1: Net Periodic Benefit Cost

Other Expenses

Regulatory Charges and Assessments expense, which is included in other noninterest expense, was \$192 million and \$409 million in the second quarter and first half of 2021, respectively, compared with \$211 million and \$374 million in the same periods a year ago, and primarily consisted of Federal Deposit Insurance Corporation (FDIC) deposit assessment expense.

Note 19: Restructuring Charges

The Company began pursuing various initiatives to reduce expenses and create a more efficient and streamlined organization in third quarter 2020. Actions from these initiatives may include (i) reorganizing and simplifying business processes and structures to improve internal operations and the customer experience, (ii) reducing headcount, (iii) optimizing third-party spending, including for our technology infrastructure, and (iv) rationalizing our branch and administrative locations, which may include consolidations and closures.

Restructuring charges are recorded as a component of noninterest expense on our consolidated statement of income.

The following costs associated with these initiatives are included in restructuring charges.

- Personnel costs – Severance costs associated with headcount reductions with payments made over time in accordance with our severance plan, as well as payments for other employee benefit costs such as incentive compensation.
- Facility closure costs – Write-downs and acceleration of depreciation and amortization of owned or leased assets for branch and administrative locations, as well as related decommissioning costs.
- Other – Impairment of other assets and costs associated with our technology infrastructure.

Table 19.1 provides details on our restructuring charges.

Table 19.1: Accruals for Restructuring Charges

Balance, end of year	\$	1,170	—	44	1,214

(1) Represents reduction of expense for changes in previously estimated amounts based on refinements of assumptions.

Note 20: Earnings and Dividends Per Common Share

Table 20.1 shows earnings per common share and diluted earnings per common share and reconciles the numerator and denominator of both earnings per common share calculations.

Table 20.1: Earnings Per Common Share Calculations

(in millions, except per share amounts)	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Wells Fargo net income (loss) (1)	\$ 6,040	\$ (3,846)	\$ 10,676	(2,930)
Less: Preferred stock dividends and other (2)	297	314	677	926
Wells Fargo net income (loss) applicable to common stock (numerator) (1)	\$ 5,743	(4,160)	\$ 9,999	(3,856)
Earnings per common share				
Average common shares outstanding (denominator)	4,124.6	4,105.5	4,132.9	4,105.2
Per share	\$ 1.39	(1.01)	\$ 2.42	(0.94)
Diluted earnings per common share				
Average common shares outstanding	4,124.6	4,105.5	4,132.9	4,105.2
Add: Restricted share rights (3)	31.5	—	31.7	—
Diluted average common shares outstanding (denominator)	4,156.1	4,105.5	4,164.6	4,105.2
Per share	\$ 1.38	(1.01)	\$ 2.40	(0.94)

- (1) In second quarter 2021, we elected to change our accounting method for low-income housing tax credit investments and elected to change the presentation of investment tax credits related to solar energy investments. Prior period balances have been revised to conform with the current period presentation. For additional information, see Note 1 (Summary of Significant Accounting Policies).
- (2) The quarter ended June 30, 2021, balance included \$4 million, and the six months ended June 30, 2021 and 2020, includes \$48 million and \$272 million, respectively, from the elimination of discounts or issuance costs associated with redemptions of preferred stock.
- (3) Calculated using the treasury stock method. In the second quarter and first half of 2020, diluted average common shares outstanding equaled average common shares outstanding because our securities convertible into common shares had an anti-dilutive effect.

Table 20.2 presents the outstanding securities that were anti-dilutive and therefore not included in the calculation of diluted earnings per common share.

Table 20.2: Outstanding Anti-Dilutive Securities

(in millions)	Quarter ended June 30,		Weighted-average shares Six months ended June 30,	
	2021	2020	2021	2020
Convertible Preferred Stock, Series L (1)	25.3	25.3	25.3	25.3
Restricted share rights (2)	0.2	35.9	0.1	0.9

- (1) Calculated using the if-converted method.
- (2) Calculated using the treasury stock method. Since we had net losses attributable to common shareholders for the second quarter and first half of 2020, all RSRs outstanding were anti-dilutive. Weighted average RSRs outstanding were 50.7 million and 54.7 million for the second quarter and first half of 2020, respectively.

Table 20.3 presents dividends declared per common share.

Table 20.3: Dividends Declared Per Common Share

	Quarter ended June 30,		Six months ended June 30,	
	2021	2020	2021	2020
Per common share	\$ 0.10	\$ 0.51	\$ 0.20	1.02

Note 21: Other Comprehensive Income

Table 21.1 provides the components of other comprehensive income (OCI), reclassifications to net income by income statement line item, and the related tax effects.

(1) Substantially all of the amounts for fair value hedges are foreign exchange contracts.

(2) Majority of the amounts for cash flow hedges are interest rate contracts.

Note 22: Operating Segments

Our management reporting is organized into four reportable operating segments: Consumer Banking and Lending; Commercial Banking; Corporate and Investment Banking; and Wealth and Investment Management. All other business activities that are not included in the reportable operating segments have been included in Corporate. We define our reportable operating segments by type of product and customer segment, and their results are based on our management reporting process. The management reporting process measures the performance of the reportable operating segments based on the Company's management structure, and the results are regularly reviewed by our Chief Executive Officer and Operating Committee. The management reporting process is based on U.S. GAAP and includes specific adjustments, such as funds transfer pricing for asset/liability management, shared revenues and expenses, and taxable-equivalent adjustments to consistently reflect income from taxable and tax-exempt sources, which allows management to assess performance consistently across the operating segments.

In March 2021, we announced an agreement to sell our Corporate Trust Services business and, in second quarter 2021, we moved the business from the Commercial Banking operating segment to Corporate. Prior period balances have been revised to conform with the current period presentation. This change did not impact the previously reported consolidated financial results of the Company.

In second quarter 2021, we elected to change our accounting method for low-income housing tax credit (LIHTC) investments and elected to change the presentation of investment tax credits related to solar energy investments. These accounting policy changes had a nominal impact on reportable operating segment results. Prior period financial statement line items for the Company, as well as for the reportable operating segments, have been revised to conform with the current period presentation. Our LIHTC investments are included in the Corporate and Investment Banking operating segment and our solar energy investments are included in the Commercial Banking operating segment. For additional information, see Note 1 (Summary of Significant Accounting Policies).

Consumer Banking and Lending offers diversified financial products and services for consumers and small businesses with annual sales generally up to \$5 million. These financial products and services include checking and savings accounts, credit and debit cards, as well as home, auto, personal, and small business lending.

Commercial Banking provides financial solutions to private, family owned and certain public companies. Products and services include banking and credit products across multiple industry sectors and municipalities, secured lending and lease products, and treasury management.

Corporate and Investment Banking delivers a suite of capital markets, banking, and financial products and services to corporate, commercial real estate, government and institutional clients globally. Products and services include corporate banking, investment banking, treasury management, commercial real estate lending and servicing, equity and fixed income solutions, as well as sales, trading, and research capabilities.

Wealth and Investment Management provides personalized wealth management, investment and retirement products and services to clients across U.S.-based businesses including Wells Fargo Advisors and The Private Bank. We serve clients' brokerage needs, and deliver financial planning, private banking, credit, and fiduciary services to high-net worth and ultra-high-net worth individuals and families.

Corporate includes corporate treasury and enterprise functions, net of allocations (including funds transfer pricing, capital, liquidity and certain expenses), in support of the reportable operating segments, as well as our investment portfolio and affiliated venture capital and private equity businesses. In addition, Corporate includes all restructuring charges related to our efficiency initiatives. See Note 19 (Restructuring Charges) for additional information on restructuring charges. Corporate also includes certain lines of business that management has determined are no longer consistent with the long-term strategic goals of the Company, as well as results for previously divested businesses.

Basis of Presentation

FUNDS TRANSFER PRICING Corporate treasury manages a funds transfer pricing methodology that considers interest rate risk, liquidity risk, and other product characteristics. Operating segments pay a funding charge for their assets and receive a funding credit for their deposits, both of which are included in net interest income. The net impact of the funding charges or credits is recognized in corporate treasury.

REVENUE AND EXPENSE SHARING When lines of business jointly serve customers, the line of business that is responsible for providing the product or service recognizes revenue or expense with a referral fee paid or an allocation of cost to the other line of business based on established internal revenue-sharing agreements.

When a line of business uses a service provided by another line of business or enterprise function (included in Corporate), expense is generally allocated based on the cost and use of the service provided.

TAXABLE-EQUIVALENT ADJUSTMENTS Taxable-equivalent adjustments related to tax-exempt income on certain loans and debt securities are included in net interest income, while taxable-equivalent adjustments related to income tax credits for low-income housing and renewable energy investments are included in noninterest income, in each case with corresponding impacts to income tax expense (benefit). Adjustments are included in Corporate, Commercial Banking, and Corporate and Investment Banking and are eliminated to reconcile to the Company's consolidated financial results.

Note 22: Operating Segments (continued)

Table 22.1 presents our results by operating segment.

Table 22.1: Operating Segments

Assets (period-end)	432,100	226,735	510,205	84,699	713,309	—	1,967,048
Deposits (period-end)	746,602	183,085	236,620	168,249	76,155	—	1,410,711

- (1) Taxable-equivalent adjustments related to tax-exempt income on certain loans and debt securities are included in net interest income, while taxable-equivalent adjustments related to income tax credits for low-income housing and renewable energy investments are included in noninterest income, in each case with corresponding impacts to income tax expense (benefit). Adjustments are included in Corporate, Commercial Banking, and Corporate and Investment Banking and are eliminated to reconcile to the Company's consolidated financial results.
- (2) Net interest income is interest earned on assets minus the interest paid on liabilities to fund those assets. Segment interest earned includes actual interest income on segment assets as well as a funding credit for their deposits. Segment interest paid on liabilities includes actual interest expense on segment liabilities as well as a funding charge for their assets.

Note 23: Regulatory Capital Requirements and Other Restrictions

Regulatory Capital Requirements

The Company and each of its subsidiary banks are subject to regulatory capital adequacy requirements promulgated by federal banking regulators. The FRB establishes capital requirements for the consolidated financial holding company, and the OCC has similar requirements for the Company's national banks, including Wells Fargo Bank, N.A. (the Bank).

Table 23.1 presents regulatory capital information for Wells Fargo & Company and the Bank in accordance with Basel III capital requirements. Our capital adequacy is assessed based on the lower of our risk-based capital ratios calculated under the Standardized Approach and under the Advanced Approach. The Standardized Approach applies assigned risk weights to broad risk categories, while the calculation of risk-weighted assets (RWAs) under the Advanced Approach differs by requiring

applicable banks to utilize a risk-sensitive methodology, which relies upon the use of internal credit models, and includes an operational risk component. The Basel III capital requirements for calculating Common Equity Tier 1 (CET1) and tier 1 capital, along with RWAs, are fully phased-in. However, the requirements for determining tier 2 and total capital are still in accordance with transition requirements and are scheduled to be fully phased-in by the end of 2021. Accordingly, the information presented below reflects fully phased-in CET1 capital, tier 1 capital, and RWAs, but reflects total capital still in accordance with transition requirements.

At June 30, 2021, the Bank and our other insured depository institutions were considered well-capitalized under the requirements of the Federal Deposit Insurance Act.

Supplementary leverage ratio (SLR) (3)(4)		7.09 %		8.05		7.14		7.35
Tier 1 leverage ratio (5)		8.53		8.32		8.62		8.65

*Denotes the binding ratio based on the lower calculation under the Advanced and Standardized Approaches.

- At June 30, 2021, the impact of the CECL transition provision issued by federal banking regulators on the regulatory capital of the Company was an increase in capital of \$879 million, reflecting a \$991 million (post-tax) increase in capital recognized upon our initial adoption of CECL, offset by 25% of the \$7.5 billion increase in our ACL under CECL from January 1, 2020, through June 30, 2021. The impact of the CECL transition provision on the regulatory capital of the Bank at June 30, 2021, was an increase in capital of \$879 million.
- RWAs for the Company and the Bank included an increase of \$547 million under the Standardized Approach and a decrease of \$1.4 billion under the Advanced Approach related to the impact of the CECL transition provision on the excess allowance for credit losses as of June 30, 2021.
- The SLR consists of tier 1 capital divided by total leverage exposure. Total leverage exposure consists of total average assets, less goodwill and other permitted tier 1 capital deductions (net of deferred tax liabilities), plus certain off-balance sheet exposures.
- In 2020, the FRB issued an interim final rule that temporarily allowed the exclusion for on-balance sheet amounts of U.S. Treasury securities and deposits at Federal Reserve Banks from the calculation of total leverage exposure in the denominator of the SLR. The Company adopted this interim final rule, but the Bank did not elect to apply these exclusions. The interim final rule expired on April 1, 2021.
- The tier 1 leverage ratio consists of tier 1 capital divided by total average assets, excluding goodwill and certain other items as determined under the rule.

At June 30, 2021, under transition requirements, the CET1, tier 1 and total capital ratio requirements for the Company included a global systemically important bank (G-SIB) surcharge of 2.00%. The G-SIB surcharge is not applicable to the Bank. In addition, the CET1, tier 1 and total capital ratio requirements for the Company and the Bank included a stress capital buffer of 2.50% under the Standardized Approach and a capital conservation buffer of 2.50% under the Advanced Approach. The Company is required to maintain these risk-based capital ratios and to maintain an SLR of at least 5.00% (comprised of a 3.00% minimum requirement plus a supplementary leverage buffer of 2.00%) to avoid restrictions on capital distributions and discretionary bonus payments. The Bank is required to maintain an SLR of at least 6.00% to be considered well-capitalized under applicable regulatory capital adequacy rules. Table 23.2 presents the risk-based capital and leverage requirements under transition requirements to which the Company and the Bank

were subject as of June 30, 2021, and December 31, 2020, which were the same under both the Standardized and Advanced Approaches.

Table 23.2: Risk-Based Capital and Leverage Ratios – Transition Requirements

	Wells Fargo & Company	Wells Fargo Bank, N.A.
	June 30, 2021 and Dec 31, 2020	June 30, 2021 and Dec 31, 2020
Common Equity Tier 1 capital	9.00 %	7.00
Tier 1 capital	10.50	8.50
Total capital	12.50	10.50
Tier 1 leverage	4.00	4.00
Supplementary leverage	5.00	6.00

Capital Planning Requirements

The FRB's capital plan rule establishes capital planning and other requirements that govern capital distributions, including dividends and share repurchases, by certain large bank holding companies (BHCs), including Wells Fargo. The FRB conducts an annual Comprehensive Capital Analysis and Review exercise and has also published guidance regarding its supervisory expectations for capital planning, including capital policies regarding the process relating to common stock dividend and repurchase decisions in the FRB's SR Letter 15-18. The Parent's ability to make certain capital distributions is subject to the requirements of the capital plan rule and is also subject to the Parent meeting or exceeding certain regulatory capital minimums.

On March 25, 2021, the FRB announced that it was extending measures it previously announced limiting large BHCs, including Wells Fargo, from making any capital distribution (excluding any capital distribution arising from the issuance of a capital instrument eligible for inclusion in the numerator of a regulatory capital ratio), unless otherwise approved by the FRB. The FRB generally authorized BHCs to (i) provided that the BHC does not increase the amount of its common stock dividends to be larger than the level paid in second quarter 2020, pay common stock dividends and make share repurchases that, in the aggregate, do not exceed an amount equal to the average of the BHC's net income for the four preceding calendar quarters; (ii) make share repurchases that equal the amount of share issuances related to expensed employee compensation; and (iii) redeem and make scheduled payments on additional tier 1 and tier 2 capital instruments. These limitations on capital distributions ended on June 30, 2021.

Loan and Dividend Restrictions

Federal law restricts the amount and the terms of both credit and non-credit transactions between a bank and its nonbank affiliates. Additionally, federal laws and regulations limit the dividends that a national bank may pay.

Our nonbank subsidiaries are also limited by certain federal and state statutory provisions and regulations covering the amount of dividends that may be paid in any given year. In addition, under a Support Agreement dated June 28, 2017, as amended and restated on June 26, 2019, among Wells Fargo & Company, the parent holding company (the "Parent"), WFC Holdings, LLC, an intermediate holding company and subsidiary of the Parent (the "IHC"), Wells Fargo Bank, N.A., Wells Fargo Securities, LLC, Wells Fargo Clearing Services, LLC, and certain other subsidiaries of the Parent designated from time to time as material entities for resolution planning purposes or identified from time to time as related support entities in our resolution plan, the IHC may be restricted from making dividend payments to the Parent if certain liquidity and/or capital metrics fall below defined triggers or if the Parent's board of directors authorizes it to file a case under the U.S. Bankruptcy Code.

For additional information on loan and dividend restrictions, see Note 28 (Regulatory Capital Requirements and Other Restrictions) in our 2020 Form 10-K.

Cash Restrictions

Cash and cash equivalents may be restricted as to usage or withdrawal. Table 23.3 provides a summary of restrictions on cash and cash equivalents.

Table 23.3: Nature of Restrictions on Cash and Cash Equivalents

(in millions)	Jun 30, 2021	Dec 31, 2020
Reserve balance for non-U.S. central banks	\$ 199	243
Segregated for benefit of brokerage customers under federal and other brokerage regulations	878	957

Glossary of Acronyms

ACL	Allowance for credit losses	HTM	Held-to-maturity
AFS	Available-for-sale	LCR	Liquidity coverage ratio

PART II – OTHER INFORMATION

Item 1. Legal Proceedings

Information in response to this item can be found in Note 13 (Legal Actions) to Financial Statements in this Report which information is incorporated by reference into this item.

Item 1A. Risk Factors

Information in response to this item can be found under the “Financial Review – Risk Factors” section in this Report which information is incorporated by reference into this item.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

The following table shows Company repurchases of its common stock for each calendar month in the quarter ended June 30, 2021.

Calendar month	Total number of shares repurchased (1)	Weighted average price paid per share	Maximum number of shares that may yet be repurchased under the authorizations
April	20,075,596	\$ 43.60	629,954,518
May	10,893,389	46.11	619,061,129
June	4,354,796	43.08	614,706,333
Total	35,323,781		

(1) All shares were repurchased under an authorization covering up to 350 million shares of common stock approved by the Board of Directors and publicly announced by the Company on July 23, 2019. In addition, the Company publicly announced on January 15, 2021, that the Board of Directors authorized the repurchase of an additional 500 million shares of common stock. Unless modified or revoked by the Board, these authorizations do not expire.

Item 6. Exhibits

A list of exhibits to this Form 10-Q is set forth below.

The Company's SEC file number is 001-2979. On and before November 2, 1998, the Company filed documents with the SEC under the name Norwest Corporation. The former Wells Fargo & Company filed documents under SEC file number 001-6214.

<u>Exhibit Number</u>	<u>Description</u>	<u>Location</u>

PART I.

ITEM 1. BUSINESS

Wells Fargo & Company is a corporation organized under the laws of Delaware and a financial holding company and a bank holding company registered under the Bank Holding Company Act of 1956, as amended (BHC Act). Its principal business is to act as a holding company for its subsidiaries. References in this report to “the Parent” mean the holding company. References to “we,” “our,” “us” or “the Company” mean the holding company and its subsidiaries that are consolidated for financial reporting purposes.

At December 31, 2020, we had assets of approximately \$1.9 trillion, loans of \$887.6 billion, deposits of \$1.4 trillion and stockholders’ equity of \$185 billion. Based on assets, we were the fourth largest bank holding company in the United States. At December 31, 2020, Wells Fargo Bank, N.A. was the Company’s principal subsidiary with assets of \$1.8 trillion, or 90% of the Company’s assets.

Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to those reports, are available for free at www.wellsfargo.com/about/investor-relations/filings as soon as reasonably practicable after they are electronically filed with or furnished to the Securities and Exchange Commission (SEC). They are also available for free on the SEC’s website at www.sec.gov¹.

DESCRIPTION OF BUSINESS

General

We are a leading financial services company that provides a diversified set of banking, investment and mortgage products and services, as well as consumer and commercial finance, through banking locations and offices, the internet (www.wellsfargo.com) and other distribution channels to individuals, businesses and institutions in all 50 states, the District of Columbia and in countries outside the U.S. We provide consumer financial products and services including checking and savings accounts, credit and debit cards, and auto, mortgage and home equity, and small business lending. In addition, we offer financial planning, private banking, investment management, and fiduciary services. We also provide financial solutions to businesses through products and services including traditional commercial loans and lines of credit, letters of credit, asset-based lending, trade financing, treasury management, and investment banking services.

As of December 31, 2020, we had four reportable operating segments for management reporting purposes: Consumer Banking and Lending; Commercial Banking; Corporate and Investment Banking; and Wealth and Investment Management. The 2020 Annual Report to Shareholders includes financial information and descriptions of these operating segments.

Human Capital

Our people are what set Wells Fargo apart and are critical to our success. Wells Fargo continues to invest in our employees by offering market competitive compensation, career-development opportunities, a broad array of benefits, and strong work-life programs.

In 2020, we introduced a new set of expectations for everyone at the Company. These expectations guide how we lead ourselves, collaborate with our colleagues, and make decisions. The following expectations apply to everyone at Wells Fargo, at every level, and in every role:

- Embrace candor
- Do what’s right
- Be great at execution
- Learn and grow
- Champion diversity and inclusion
- Build high-performing teams (for managers)

At December 31, 2020, we had an active employee headcount of 268,531, with approximately 88% of employees based in the United States. Our global workforce was 54% female and 46% male, and our U.S. workforce was 56% female and 44% male. Our U.S. workforce was 55% Caucasian/white and 45% racially/ethnically diverse.

Supporting Employees During the COVID-19 Pandemic. In response to the COVID-19 pandemic, we expanded work-from-home capabilities wherever possible, and enabled approximately 200,000 employees to work from home. For jobs that could not be done remotely, we took significant actions to enhance safety, including implementing social distancing measures, requiring employees to wear facial coverings, staggering staff and shifts, and enhancing cleaning protocols in accordance with guidance from the U.S. Centers for Disease Control and Prevention. We adjusted our child care benefits in the U.S. and Canada to provide additional resources and flexibility for employees impacted by school closures. We also enhanced our health care and time-off benefits in the U.S. to help fully cover the medical costs associated with COVID-19 and allow high-risk, exposed, or infected employees to stay home without having to take paid time off. At more than 50 of our largest U.S. sites, we launched a temporary on-site nursing service to screen for COVID-19 symptoms and refer individuals for testing. We also took a number of actions to support our employees’ financial security. We made additional cash payments to employees whose roles required them to go into the office to serve customers or other employees. For U.S. nonexempt employees, we temporarily doubled the hourly rate for time worked over 40 hours per week. We also made a \$25 million grant to the WE Care employee relief fund, which provided financial assistance to more than 23,000 U.S. and international employees facing COVID-related hardships.

Promoting Diversity, Equity and Inclusion. Meeting the increasingly diverse needs of Wells Fargo’s global customer base is critical to our company’s long-term growth and success. Wells Fargo values and promotes diversity, equity and inclusion in every aspect of our business. We are dedicated to recruitment and career development practices that support our employees and promote diversity in our workforce at all levels of our Company, including leadership positions. We have a strong record of recruiting, promoting, and rewarding women and racially/ethnically diverse employees at all levels of our Company, including a commitment to increase diverse representation in leadership roles. We use various metrics, including the actual percentage of women in our global workforce and racially/ethnically diverse individuals in senior leadership roles in the U.S. to monitor our progress. As of December 31, 2020, senior management (levels 2-4 down from the CEO) was 48% female

¹ We do not control this website. Wells Fargo has provided this link for your convenience, but does not endorse and is not responsible for the content, links, privacy policy, or security policy of this website.

and 25% racially/ethnically diverse, with 9% Black/African American. In November 2020, we appointed a Head of Diverse Segments, Representation and Inclusion, a newly created role reporting directly to the CEO, which has a broad mandate of driving diversity and inclusion in both our workplace and our business. This mandate included not only the work we do within our existing diversity and inclusion function, but also working with our business leaders to drive investments in products and solutions specifically for diverse populations across our country.

Pay Equity Review. Wells Fargo is committed to fair and equitable compensation practices, and we regularly review our compensation programs and practices for pay equity. Each year, we engage a third-party consultant to conduct a thorough pay equity review of employee compensation, which considers gender, race, and ethnicity. The results of our 2020 review, after accounting for factors such as role, tenure, and geography, show that women at Wells Fargo continued to earn more than 99 cents for every \$1 earned by their male peers. In addition, our U.S. employees who are racially/ethnically diverse continued to earn more than 99 cents for every \$1 earned by Caucasian/white peers. These results have remained consistent since we started publishing the results of our pay equity review in 2017.

Employee training and development. We invest heavily in coaching and training for employees and managers. We believe that when our employees feel properly supported, engaged, and confident in their skills, they are more effective and can provide an even better customer experience. During 2020, we invested more than \$200 million in employee learning and development, which included functional training, regulatory compliance, leadership and professional development, and early talent development programs for employees.

Compensation and benefits. We value and support our people as a competitive advantage. We provide all eligible full- and part-time employees (and their eligible dependents, as applicable) with a comprehensive set of benefits designed to protect their physical and financial health and to help them make the most of their financial future. Our annual investment in benefits programs per employee was approximately \$15,700. During 2020, we also raised minimum hourly pay levels in a majority of U.S. markets, with more than 25,000 employees receiving a pay adjustment.

Competition

The financial services industry is highly competitive. Our subsidiaries compete with financial services providers such as banks, savings and loan associations, credit unions, finance companies, mortgage banking companies, insurance companies, investment banks and mutual fund companies. They also face increased competition from nonbank institutions such as brokerage houses, private equity firms and online lending companies, as well as from financial services subsidiaries of commercial and manufacturing companies. Many of these competitors enjoy fewer regulatory constraints and some may have lower cost structures.

Securities firms and insurance companies that elect to become financial holding companies may acquire banks and other financial institutions. Combinations of this type could significantly change the competitive environment in which we conduct business. The financial services industry is also likely to become more competitive as further technological advances enable more companies to provide financial services. These technological advances may diminish the importance of

depository institutions and other financial intermediaries in the transfer of funds between parties.

REGULATION AND SUPERVISION

We describe below, and in Note 28 (Regulatory Capital Requirements and Other Restrictions) to Financial Statements included in the 2020 Annual Report to Shareholders, the material elements of the regulatory framework applicable to us. Banking statutes, regulations and policies are continually under review by Congress and state legislatures and federal and state regulatory agencies, as well as non-U.S. governments and financial regulators, and a change in them, including changes in how they are interpreted or implemented, could have a material effect on our business. The regulatory framework applicable to depository institutions and bank holding companies (BHCs) is intended to protect depositors, federal deposit insurance funds, consumers and the banking system as a whole, and not necessarily investors in bank holding companies such as the Company.

Statutes, regulations and policies could restrict our ability to diversify into other areas of financial services, make acquisitions, and pay dividends on our capital stock. They may also require us to provide financial support to one or more of our subsidiary banks, maintain capital balances in excess of amounts desired by management, and pay higher deposit insurance premiums as a result of a general deterioration in the financial condition of depository institutions. See the “Regulatory Matters” and “Risk Factors” sections in the 2020 Annual Report to Shareholders for additional information.

General

Parent Bank Holding Company. As a BHC, the Parent is subject to regulation under the BHC Act and to inspection, examination and supervision by its primary regulator, the Board of Governors of the Federal Reserve System (Federal Reserve Board or FRB). The Parent is also subject to the disclosure and regulatory requirements of the Securities Act of 1933, as amended, and the Securities Exchange Act of 1934, as amended, both as administered by the SEC. As a company with securities listed on the New York Stock Exchange (NYSE), the Parent is subject to the rules of the NYSE for listed companies.

Subsidiary Banks. Our subsidiary national banks, and their subsidiaries, are subject to regulation and examination primarily by the Office of the Comptroller of the Currency (OCC) and also by the Federal Deposit Insurance Corporation (FDIC), the FRB, the Consumer Financial Protection Bureau (CFPB), the SEC and the Commodities Futures Trading Commission (CFTC). The non-U.S. branches and representative offices of our subsidiary national banks are subject to regulation and examination by their respective financial regulators as well as by the OCC and the FRB. Non-U.S. subsidiaries of our national bank subsidiaries may be subject to the laws and regulations of the countries in which they conduct business.

Nonbank Subsidiaries. Many of our nonbank subsidiaries are also subject to regulation by the FRB and other applicable federal and state agencies. Our insurance subsidiaries are subject to regulation by applicable state insurance regulatory agencies, as well as the FRB. Our brokerage subsidiaries are regulated by the SEC, the Financial Industry Regulatory Authority (FINRA) and, in some cases, the CFTC and the Municipal Securities Rulemaking Board, and state securities regulators. Our other nonbank subsidiaries may be subject to the laws and regulations of the federal government and/or the various states as well as non-U.S. countries in which they conduct business.

Parent Bank Holding Company Activities

“Financial in Nature” Requirement. We became a financial holding company effective March 13, 2000. We continue to maintain our status as a BHC for purposes of other FRB regulations. As a BHC that has elected to be treated as a financial holding company pursuant to the BHC Act, we may affiliate with securities firms and insurance companies and engage in other activities that are financial in nature or incidental or complementary to activities that are financial in nature. “Financial in nature” activities include securities underwriting, dealing and market making; sponsoring mutual funds and investment companies; insurance underwriting and agency; merchant banking; and activities that the FRB, in consultation with the Secretary of the U.S. Treasury, determines to be financial in nature or incidental to such financial activity. “Complementary activities” are activities that the FRB determines upon application to be complementary to a financial activity and do not pose a safety and soundness risk.

FRB approval is generally not required for us to acquire a company (other than a BHC, bank or savings association) engaged in activities that are financial in nature or incidental to activities that are financial in nature, as determined by the FRB. Prior notice to the FRB may be required, however, if the company to be acquired has total consolidated assets of \$10 billion or more. Prior FRB approval is required before we may acquire the beneficial ownership or control of more than 5% of the voting shares or substantially all of the assets of a BHC, bank or savings association. In addition, the FRB has implemented a final rule under the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) that also prohibits our ability to merge, acquire all or substantially all of the assets of, or acquire control of another company if our total resulting consolidated liabilities would exceed 10% of the aggregate consolidated liabilities of all financial companies.

Because we are a financial holding company, if any of our subsidiary banks receives a rating under the Community Reinvestment Act of 1977, as amended (CRA), of less than satisfactory, we will be prohibited, until the rating is raised to satisfactory or better, from engaging in new activities or acquiring companies other than BHCs, banks or savings associations, except that we could engage in new activities, or acquire companies engaged in activities, that are closely related to banking under the BHC Act. CRA performance is also taken into account by regulators in reviewing applications to establish bank branches. In addition, if the FRB finds that the Company or any one of our subsidiary banks is not well capitalized or well managed, we would be required to enter into an agreement with the FRB to comply with all applicable capital and management requirements and which may contain additional limitations or conditions. Until corrected, we could be prohibited from engaging in any new activity or acquiring companies engaged in activities that are not closely related to banking under the BHC Act without prior FRB approval. If we fail to correct any such condition within a prescribed period, the FRB could order us to divest our banking subsidiaries or, in the alternative, to cease engaging in activities other than those closely related to banking under the BHC Act.

Interstate Banking. Under the Riegle-Neal Interstate Banking and Branching Act (Riegle-Neal Act), a BHC may acquire banks in states other than its home state, subject to any state requirement that the bank has been organized and operating for a minimum period of time, not to exceed five years, and the requirement that the BHC not control, prior to or following the proposed acquisition, more than 10% of the total amount of deposits of insured depository institutions nationwide or, unless

the acquisition is the bank holding company’s initial entry into the state, more than 30% of such deposits in the state (or such lesser or greater amount set by the state). The Riegle-Neal Act also authorizes banks to merge across state lines, subject to the same deposit limits noted above, thereby creating interstate branches. Banks are also permitted to acquire and to establish new branches in other states.

Regulatory Approval. In determining whether to approve a proposed bank acquisition, federal banking regulators will consider, among other factors, the effect of the acquisition on competition, financial condition, and future prospects including current and projected capital ratios and levels, the competence, experience, and integrity of management and record of compliance with laws and regulations, the convenience and needs of the communities to be served, including the acquiring institution’s record of compliance under the CRA, the effectiveness of the acquiring institution in combating money laundering activities and the risk to the stability of the United States banking system.

Dividend Restrictions

The Parent is a legal entity separate and distinct from its subsidiary banks and other subsidiaries. A significant source of funds to pay dividends on our common and preferred stock and principal and interest on our debt is dividends from the Parent’s subsidiaries. Various federal and state statutory provisions and regulations limit the amount of dividends the Parent’s subsidiary banks and certain other subsidiaries may pay without regulatory approval. Federal banking regulators have the authority to prohibit the Parent’s subsidiary banks from engaging in unsafe or unsound practices in conducting their businesses. The payment of dividends, depending on the financial condition of the bank in question, could be deemed an unsafe or unsound practice. The ability of the Parent’s subsidiary banks to pay dividends in the future is currently, and could be further, influenced by bank regulatory policies and capital requirements. For information about the restrictions applicable to the Parent’s subsidiary banks, see Note 28 (Regulatory Capital Requirements and Other Restrictions) to Financial Statements included in the 2020 Annual Report to Shareholders.

Furthermore, under a Support Agreement dated June 28, 2017, as amended and restated on June 26, 2019 (the “Support Agreement”), among the Parent, WFC Holdings, LLC, an intermediate holding company and subsidiary of the Parent (the “IHC”), Wells Fargo Bank, N.A., Wells Fargo Securities, LLC, Wells Fargo Clearing Services, LLC, and certain other direct and indirect subsidiaries of the Parent designated as material entities for resolution planning purposes or identified as related support entities in our resolution plan, the IHC may be restricted from making dividend payments to the Parent if certain liquidity and/or capital metrics fall below defined triggers, or if the Parent’s board of directors authorizes it to file a case under the U.S. Bankruptcy Code. Any such restriction could materially and adversely impact the Parent’s liquidity and its ability to satisfy its debt and other obligations, as well as its ability to make dividend payments on its common and preferred stock. See the “Regulatory Matters” and “Risk Factors” sections of the 2020 Annual Report to Shareholders for additional information on the Support Agreement.

In addition to these restrictions on the ability of our subsidiary banks to pay dividends to us, the FRB requires large BHCs, including Wells Fargo, to submit annual capital plans describing planned capital distributions, such as the payment of dividends. The FRB also finalized rules implementing in the

United States the Basel Committee on Banking Supervision's regulatory capital rules, including the reforms known as Basel III, which established various capital requirements for U.S. banking organizations. Moreover, federal banking regulators have finalized rules that require leverage and supplementary leverage ratio requirements for large BHCs, like Wells Fargo, and their insured depository institutions. We are also subject to the FRB's rule implementing an additional capital surcharge on those U.S. banking organizations, such as the Company, that are designated as global systemically important banks (G-SIBs). The failure to meet any of these requirements could result in limitations or restrictions on our ability to make capital distributions.

In addition, the FRB's enhanced supervision regulations for large BHCs, like Wells Fargo, impose capital distribution restrictions, including on the payment of dividends, upon the occurrence of capital, stress test, risk management, or liquidity risk management triggers. For more information on regulations or arrangements that may impose capital distribution restrictions on the Company and its subsidiaries, see the "Capital Management," "Regulatory Matters" and "Risk Factors" sections of the 2020 Annual Report to Shareholders.

Holding Company Structure

Transfer of Funds from Subsidiary Banks. The Parent's subsidiary banks are subject to restrictions under federal law that limit the transfer of funds or other assets from such subsidiaries to the Parent and its nonbank subsidiaries (including affiliates) in so-called "covered transactions." In general, covered transactions include loans and other extensions of credit, investments and asset purchases, as well as certain other transactions involving the transfer of value from a subsidiary bank to an affiliate or for the benefit of an affiliate. Unless an exemption applies, covered transactions by a subsidiary bank with a single affiliate are limited to 10% of the subsidiary bank's capital and surplus and, with respect to all covered transactions with affiliates in the aggregate, to 20% of the subsidiary bank's capital and surplus. Also, loans and extensions of credit to affiliates generally must be secured by qualifying collateral. A bank's transactions with its nonbank affiliates are also generally required to be on arm's length terms. The Company is also subject to lending limits and qualitative requirements on loans to executive officers, directors and principal shareholders of the Parent and its subsidiary banks.

Source of Strength. The FRB has a policy that a BHC is expected to act as a source of financial and managerial strength to each of its subsidiary banks and, under appropriate circumstances, to commit resources to support each such subsidiary bank. This support may be required at times when the BHC may not have the resources to provide the support.

The OCC may order an assessment of the Parent if the capital of one of its national bank subsidiaries were to become impaired. If the Parent failed to pay the assessment within three months, the OCC could order the sale of the Parent's stock in the national bank to cover the deficiency.

Depositor Preference. In the event of the "liquidation or other resolution" of an insured depository institution, the claims of deposits payable in the United States (including the claims of the FDIC as subrogee of insured depositors) and certain claims for administrative expenses of the FDIC as a receiver will have priority over other general unsecured claims against the institution. If an insured depository institution fails, claims of insured and uninsured U.S. depositors, along with claims of the FDIC, will have priority in payment ahead of unsecured creditors,

including the Parent, and depositors whose deposits are solely payable at such insured depository institution's non-U.S. offices.

Liability of Commonly Controlled Institutions. All of the Company's subsidiary banks in the U.S. are insured by the FDIC. FDIC-insured depository institutions can be held liable for any loss incurred, or reasonably expected to be incurred, by the FDIC due to the default of an FDIC-insured depository institution controlled by the same BHC, and for any assistance provided by the FDIC to an FDIC-insured depository institution that is in danger of default and that is controlled by the same BHC. "Default" means generally the appointment of a conservator or receiver. "In danger of default" means generally the existence of certain conditions indicating that a default is likely to occur in the absence of regulatory assistance.

Dodd-Frank Act

The Dodd-Frank Act and the numerous rules to implement its provisions have resulted in enhanced regulation and supervision of large BHCs, such as Wells Fargo. This includes, among other things, rules to promote financial stability and prevent or mitigate the risks that may arise from the material distress or failure of a large BHC; enhance consumer protections; prohibit proprietary trading; and implement enhanced prudential requirements for large BHCs regarding risk-based capital and leverage, risk and liquidity management, stress testing, and recovery and resolution planning. The Dodd-Frank Act, including current and future rules implementing its provisions and the interpretation of those rules, has affected, and we expect will continue to affect, most of our businesses in some way, either directly through regulation of specific activities or indirectly through regulation of concentration risks, capital or liquidity. For more information about the Dodd-Frank Act and its effect on our business, see the "Regulatory Matters" and "Risk Factors" sections of the 2020 Annual Report to Shareholders.

Capital and Liquidity Requirements and Capital Planning

The Company and each of our insured depository institutions are subject to various regulatory capital adequacy and liquidity requirements administered by federal banking regulators. The capital rules, among other things, establish required minimum ratios relating capital to different categories of assets and exposures. Federal banking regulators have also finalized rules to impose a leverage and supplementary leverage ratio on large BHCs, like Wells Fargo, and their insured depository institutions, and to implement a liquidity coverage ratio and a net stable funding ratio. The FRB has also finalized rules to address the amount of equity and unsecured long-term debt a G-SIB must hold to improve its resolvability and resiliency, often referred to as total loss absorbing capacity.

From time to time, federal banking regulators propose changes and amendments to, and issue interpretations of, risk-based capital requirements and related reporting instructions. In addition, the FRB closely monitors capital levels of the institutions it supervises and may require such institutions to modify capital levels based on FRB determinations. Such determinations, proposals or interpretations could, if implemented in the future, affect our reported capital ratios and net risk-adjusted assets.

As an additional means to identify problems in the financial management of depository institutions, the Federal Deposit Insurance Act (FDI Act) requires federal banking regulators to establish certain non-capital safety and soundness standards for institutions for which they are the primary federal regulator. The standards relate generally to operations and management, asset

quality, interest rate exposure, executive compensation and risk management. The agencies are authorized to take action against institutions that fail to meet such standards.

The FDI Act requires federal banking regulators to take “prompt corrective action” with respect to FDIC-insured depository institutions that do not meet minimum capital requirements. A depository institution’s treatment for purposes of the prompt corrective action provisions will depend upon how its capital levels compare to various capital measures and certain other factors, as established by regulation.

In addition, the FRB’s capital plan rule establishes capital planning and other requirements that govern capital distributions, including dividends and share repurchases, by certain BHCs, including Wells Fargo. Federal banking regulators also require stress tests to evaluate whether an institution has sufficient capital to continue to operate during periods of adverse economic and financial conditions.

For more information on our capital requirements and planning, see the “Capital Management” section of the 2020 Annual Report to Shareholders.

Deposit Insurance Assessments

Our subsidiary banks in the U.S., including Wells Fargo Bank, N.A., are members of the Deposit Insurance Fund (DIF) maintained by the FDIC. Through the DIF, the FDIC insures the deposits of our banks up to prescribed limits for each depositor and funds the DIF through assessments on member banks. To maintain the DIF, member institutions are assessed an insurance premium based on an assessment base and an assessment rate.

The FDIC has adopted a comprehensive, long-range plan for DIF management, targeting a designated reserve ratio of 2%. For the year ended December 31, 2020, the Company’s FDIC deposit insurance assessments totaled \$650 million.

The FDIC may terminate a depository institution’s deposit insurance upon a finding that the institution’s financial condition is unsafe or unsound or that the institution has engaged in unsafe or unsound practices or has violated any applicable rule, regulation, order or condition enacted or imposed by the institution’s regulatory agency. The termination of deposit insurance for one or more of our bank subsidiaries could have a material adverse effect on our earnings, depending on the collective size of the particular banks involved.

Fiscal and Monetary Policies

Our business and earnings are affected significantly by the fiscal and monetary policies of the federal government and its agencies. We are particularly affected by the monetary policies of the FRB, which regulates the supply of money and credit in the United States. Among the instruments of monetary policy available to the FRB are (a) conducting open market operations in United States government securities, (b) changing the discount rates of borrowings of depository institutions, (c) imposing or changing reserve requirements against depository institutions’ deposits, and (d) imposing or changing reserve requirements against certain borrowings by banks and their affiliates. These methods are used in varying degrees and combinations to directly affect the availability of bank loans and deposits, as well as the interest rates charged on loans and paid on deposits. The policies of the FRB may have a material effect on our business, results of operations and financial condition.

Privacy Provisions of the Gramm-Leach-Bliley Act and Restrictions on Affiliate Marketing

Federal banking regulators, as required under the Gramm-Leach-Bliley Act (the GLB Act), have adopted rules limiting the ability of

banks and other financial institutions to disclose nonpublic information about consumers to nonaffiliated third parties. The rules require disclosure of privacy policies to consumers and, in some circumstances, allow consumers to prevent disclosure of certain personal information to nonaffiliated third parties. The privacy provisions of the GLB Act affect how consumer information is transmitted through diversified financial services companies and conveyed to outside vendors. Federal financial regulators have issued regulations under the Fair and Accurate Credit Transactions Act that have the effect of increasing the length of the waiting period, after privacy disclosures are provided to new customers, before information can be shared among different affiliated companies for the purpose of marketing products and services by those affiliated companies.

Sarbanes-Oxley Act of 2002

The Sarbanes-Oxley Act of 2002 (Sarbanes-Oxley) implemented a broad range of corporate governance and accounting measures to increase corporate responsibility, to provide for enhanced penalties for accounting and auditing improprieties at publicly traded companies, and to protect investors by improving the accuracy and reliability of disclosures under federal securities laws. We are subject to Sarbanes-Oxley because we are required to file periodic reports with the SEC under the Securities Exchange Act of 1934. Among other things, Sarbanes-Oxley and/or its implementing regulations established membership requirements and additional responsibilities for our audit committee, imposed restrictions on the relationship between us and our outside auditors (including restrictions on the types of non-audit services our auditors may provide to us), imposed additional responsibilities for our external financial statements on our chief executive officer and chief financial officer, expanded the disclosure requirements for our corporate insiders, required our management to evaluate our disclosure controls and procedures and our internal control over financial reporting, and required our independent registered public accounting firm to issue a report on our internal control over financial reporting.

Patriot Act

The Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act of 2001 (Patriot Act) is intended to strengthen the ability of U.S. law enforcement agencies and intelligence communities to work together to combat terrorism on a variety of fronts. The Patriot Act has significant implications for depository institutions, brokers, dealers and other businesses involved in the transfer of money. The Patriot Act requires the implementation of policies and procedures relating to anti-money laundering, compliance, suspicious activities, and currency transaction reporting and due diligence on customers. The Patriot Act also requires federal banking regulators to evaluate the effectiveness of an applicant in combating money laundering in determining whether to approve a proposed bank acquisition.

Future Legislation or Regulation

Economic, market and political conditions during the past few years have led to a significant amount of legislation and regulation in the U.S. and abroad affecting the financial services industry, as well as heightened expectations and scrutiny of financial services companies from banking regulators. Further legislative changes and additional regulations may change our operating environment in substantial and unpredictable ways. Such legislation and regulations could increase our cost of doing business, affect our compensation structure, restrict or expand the activities in which we may engage or affect the competitive

balance among banks, savings associations, credit unions, and other financial institutions. We cannot predict whether future legislative proposals will be enacted and, if enacted, the effect that they, or any implementing regulations, would have on our business, results of operations or financial condition.

As of December 31, 2020, we provided a diversified set of banking, investment and mortgage products and services, as well as consumer and commercial finance, through banking locations and offices under ownership and lease agreements. We continue to evaluate our owned and leased properties and may determine from time to time that certain of our properties are no longer necessary for our operations. There is no assurance that we will be able to dispose of any excess properties or that we will not incur charges in connection with such dispositions, which could be material to our operating results in a given period.

Additional information in response to this Item 2 can be found in the 2020 Annual Report to Shareholders under “Financial Statements – Notes to Financial Statements – Note 7 (Premises, Equipment and Other Assets).” That information is incorporated into this item by reference.

ITEM 3. LEGAL PROCEEDINGS

Information in response to this Item 3 can be found in the 2020 Annual Report to Shareholders under “Financial Statements – Notes to Financial Statements – Note 15 (Legal Actions).” That information is incorporated into this item by reference.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II

ITEM 5. MARKET FOR REGISTRANT’S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

MARKET INFORMATION

The Company’s common stock is listed on the NYSE (symbol “WFC”). The “Stock Performance” section of the 2020 Annual Report to Shareholders provides stockholder return comparisons and is incorporated herein by reference. At February 16, 2021, there were 273,418 holders of record of the Company’s common stock.

DIVIDENDS

The dividend restrictions discussions in the “Regulation and Supervision – Dividend Restrictions” section under Item 1 of this report and in the 2020 Annual Report to Shareholders under “Financial Statements – Notes to Financial Statements – Note 28

(Regulatory Capital Requirements and Other Restrictions)” are incorporated into this item by reference.

REPURCHASES OF EQUITY SECURITIES

In July 2019, our Board of Directors authorized the repurchase of 350 million shares of our common stock, of which approximately 167 million shares were remaining under this authority at December 31, 2020. In January 2021, our Board of Directors authorized the repurchase of an additional 500 million shares of our common stock. The authorizations cover shares repurchased to meet employee benefit plan requirements. The Company maintains a variety of retirement plans for its employees and typically is a net issuer of shares of common stock to these plans. From time to time, it also purchases shares of common stock from these plans to accommodate employee preferences. Share repurchases are subtracted from the Company’s repurchase authority without offset for share issuances. Shares may be repurchased as part of employee stock option exercises, from the different benefit plans or in the open market, subject to regulatory approval.

The amount and timing of stock repurchases will be based on various factors, including our capital requirements, the number of shares we expect to issue for employee benefit plans and acquisitions, market conditions (including the trading price of our stock), and regulatory and legal considerations. See the “Capital Management” section in the 2020 Annual Report to Shareholders for additional information about our common stock repurchases.

The following table shows Company repurchases of its common stock for each calendar month in the quarter ended December 31, 2020. In fourth quarter 2020, share repurchases were limited to repurchases in connection with the Wells Fargo & Company Stock Purchase Plan.

Calendar month	Total number of shares repurchased (1)	Weighted-average price paid per share	Maximum number of shares that may yet be repurchased under the authorization
October	38,777	\$ 23.46	167,334,604
November	42,428	24.74	167,292,176
December	50,917	29.17	167,241,259
Total	132,122		

(1) All shares were repurchased under an authorization covering up to 350 million shares of common stock approved by the Board of Directors and publicly announced by the Company on July 23, 2019. Unless modified or revoked by the Board, this authorization does not expire.

ITEM 6. SELECTED FINANCIAL DATA

Not applicable.

ITEM 7. MANAGEMENT’S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Information in response to this Item 7 can be found in the 2020 Annual Report to Shareholders under “Financial Review.” That information is incorporated into this item by reference.

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Information in response to this Item 7A can be found in the 2020 Annual Report to Shareholders under “Financial Review – Risk Management – Asset/Liability Management.” That information is incorporated into this item by reference.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

Information in response to this Item 8 can be found in the 2020 Annual Report to Shareholders under “Financial Statements,” under “Notes to Financial Statements” and under “Quarterly Financial Data.” That information is incorporated into this item by reference.

ITEM 9. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

Not applicable.

ITEM 9A. CONTROLS AND PROCEDURES

Information in response to this Item 9A can be found in the 2020 Annual Report to Shareholders under “Controls and Procedures.” That information is incorporated into this item by reference.

ITEM 9B. OTHER INFORMATION

Not applicable.

PART III

ITEM 10. DIRECTORS, EXECUTIVE OFFICERS AND CORPORATE GOVERNANCE

INFORMATION ABOUT OUR EXECUTIVE OFFICERS

Muneera S. Carr (age 52)

Executive Vice President, Chief Accounting Officer and Controller since March 2020;
Executive Vice President and Controller from January 2020 to March 2020;
Executive Vice President from February 2013 to October 2019 and Chief Financial Officer from January 2018 to October 2019 at Comerica, Incorporated, a financial services company;
Chief Accounting Officer at Comerica Incorporated from July 2010 to January 2018.
Ms. Carr has served with the Company for 1 year.

William M. Daley (age 72)

Vice Chairman of Public Affairs since November 2019;
Vice Chairman and a member of the Executive Committee at Bank of New York Mellon, a financial services company, from June 2019 to October 2019;
Managing Partner at Argentiere Capital, an investment management firm, from May 2014 to June 2019.
Mr. Daley has served with the Company for 1 year.

Derek A. Flowers (age 49)

Senior Executive Vice President and Head of Strategic Execution and Operations since June 2019;
Executive Vice President and Chief Credit and Market Risk Officer from July 2016 to June 2019;
Executive Vice President and Chief Credit Officer from July 2014 to July 2016.
Mr. Flowers has served with the Company or its predecessors for 22 years.

David C. Gallorese (age 41)

Senior Executive Vice President since January 2019, Executive Vice President from July 2018 to January 2019, and Human Resources Director since July 2018;
Senior Vice President and Head of Talent at Walmart Inc., a multinational retailer, from October 2017 to June 2018;
Senior Vice President and Chief Human Resources Officer at Sam's Club (Walmart Inc.) from October 2016 to June 2018;
Vice President and Head of Human Resources at Medallia Inc., an international software company, from May 2012 to October 2016.
Mr. Gallorese has served with the Company for 3 years.

Mary T. Mack (age 58)

Senior Executive Vice President and CEO of Consumer and Small Business Banking since February 2020;

Mr. Williams has served with the Company for less than 1 year.

There is no family relationship between any of the Company's executive officers or directors. All executive officers serve at the pleasure of the Board of Directors.

AUDIT COMMITTEE INFORMATION

The Audit Committee is a standing audit committee of the Board of Directors established in accordance with Section 3(a)(58)(A) of the Securities Exchange Act of 1934. The Committee has four members: Mark A. Chancy, Theodore F. Craver, Jr., Charles H. Noski (Chair), and Ronald L. Sargent. Each member is independent, as independence for audit committee members is defined by NYSE rules. The Board of Directors has determined, in its business judgment, that each member of the Audit Committee is financially literate, as required by NYSE rules, and that each qualifies as an "audit committee financial expert" as defined by SEC regulations.

CODE OF ETHICS AND BUSINESS CONDUCT

The Company's Code of Ethics and Business Conduct applicable to employees (including executive officers) as well as directors, the Company's corporate governance guidelines, and the charters for the Audit, Governance and Nominating, Human Resources, Corporate Responsibility, Credit, Finance, and Risk Committees are available at www.wellsfargo.com/about/corporate/governance. Effective March 1, 2021, the Risk Committee will have primary oversight responsibility for credit risk and the Credit Committee will become a subcommittee of the Risk Committee.

ADDITIONAL INFORMATION

Additional information in response to this Item 10 can be found in the Company's 2021 Proxy Statement under "Corporate Governance – Item 1 – Election of Directors – Director Nominees for Election" and under "Corporate Governance – Director Election Standard and Nomination Process – Director Nomination Process." That information is incorporated into this item by reference.

ITEM 11. EXECUTIVE COMPENSATION

Information in response to this Item 11 can be found in the Company's 2021 Proxy Statement under "Corporate Governance – Compensation Committee Interlocks and Insider Participation," under "Corporate Governance – Director Compensation," under "Information About Related Persons – Related Person Transactions," and under "Executive Compensation – Compensation Committee Report," "Executive Compensation – Compensation Discussion and Analysis," "Executive Compensation – Executive Compensation Tables," and "Human Capital Management – Performance Management and Incentive Compensation – Incentive Compensation Risk Management," and "Human Capital Management – Our Workforce – CEO Pay Ratio and Median Annual Total Compensation." That information is incorporated into this item by reference.

ITEM 12. SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT AND RELATED STOCKHOLDER MATTERS

EQUITY COMPENSATION PLAN INFORMATION

The following table provides information about our equity compensation plans in effect on December 31, 2020, separately aggregated for plans approved by shareholders and for plans not approved by shareholders. A description of the material features of each equity compensation plan not approved by shareholders follows the table. All outstanding awards relate to shares of our common stock. Information is as of December 31, 2020, unless otherwise indicated.

Equity Compensation Plan Information			
Plan category	(a) # of shares to be issued upon exercise of outstanding option, warrants and rights	(b) Weighted-average exercise price of outstanding options, warrants and rights (1)	(c) # of shares remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a))
Equity compensation plans approved by security holders	55,945,540 (2)	\$ 0.00	204,307,278 (3)
Equity compensation plans not approved by security holders	5,185,538 (4)	NA	3,462,972 (5)
Total	61,131,078	0.00	207,770,250

- (1) Does not reflect restricted share rights (RSRs), restricted share units (RSUs), performance share awards or deferred compensation benefits because they have no exercise price.
- (2) For the Long-Term Incentive Compensation Plan (LTICP), consists of 46,280,020 shares subject to RSRs, and a maximum of 7,556,784 performance shares. For the Supplemental 401(k) Plan, consists of 1,637,957 shares issuable upon distribution of benefits. For the Directors Stock Compensation and Deferral Plan (Directors Plan), consists of 264,598 shares issuable upon distribution of deferred stock awards, and 206,181 shares issuable upon distribution of deferred compensation benefits.
- (3) We could have issued the number of shares of our common stock indicated in the following table pursuant to any of the award types listed for the plan or, if indicated for the plan, pursuant to distributions of deferred compensation benefits. Each share of common stock issued under the LTICP pursuant to awards count as two shares.
- (4) This consists of shares of common stock issuable upon distribution of deferred compensation benefits and 2,833 shares issuable upon distribution related to the Norwest Corporation Directors' Formula Stock Award Plan.
- (5) We could have issued the number of shares of our common stock indicated in the following table pursuant to distributions of deferred compensation benefits. No information is provided for the Norwest Corporation Directors' Formula Stock Award Plan because no future awards or deferrals will be made under this plan and because column (a) reflects all shares issuable under those plans upon exercise or distribution of outstanding awards or deferred compensation benefits.

Plans approved by security holders	# of shares remaining available for future issuance under equity compensation plans	Award types
LTICP	202,279,485	Stock, restricted stock, RSRs, performance shares, performance units
Supplemental 401(k) Plan	1,764,227	Deferral distribution
Directors Plan	263,566	Stock options, deferral distribution
Total	204,307,278	

Plans not approved by security holders	# of shares remaining available for future issuance under equity compensation plans	Award types
Deferred Compensation Plan	3,305,224	Deferral distribution
Non-Qualified Deferred Compensation Plan for Independent Contractors	157,748	Deferral distribution
Total	3,462,972	

Material Features of Equity Compensation Plans Not Approved by Shareholders

Deferred Compensation Plan. Under the Deferred Compensation Plan, eligible employees may defer receipt of salary, bonuses and certain other compensation subject to the terms of the plan. Deferral elections are irrevocable once made except for limited re-deferral opportunities. We treat amounts deferred by a participant as if invested in the earnings options selected by the participant, and determine the deferred compensation benefit payable to the participant based on the performance of those earnings options. The plan offers a number of earnings options, including one based on our common stock with dividends reinvested. We generally distribute amounts allocated to the common stock option in shares of common stock. Participants have no direct interest in any of the earnings options and are general unsecured creditors of the Company with respect to their deferred compensation benefits under the plan.

Non-Qualified Deferred Compensation Plan for Independent Contractors. Under the Non-Qualified Deferred Compensation Plan for Independent Contractors participants who performed qualifying investment or other financial services for participating affiliates as independent contractors were able to defer all or part of their eligible compensation payable to them by the affiliate subject to the terms of the plan. Deferral elections were irrevocable once made. Amounts deferred by a participant were treated as if invested in the earnings options selected by the participant, which determine the deferred compensation benefit payable to the participant. The plan offered a number of earnings options, including one based on our common stock with dividends reinvested. We generally distribute amounts allocated to the common stock option in shares of common stock. No future deferrals may be made under this plan and participants may no longer reallocate their existing account balances under the plan among different investment options. Shares remaining available for issuance under the plan consist of shares issuable as a result of amounts credited to participant accounts denominated in our common stock to reflect cash dividends paid on the common stock. The plan is sponsored by a wholly owned subsidiary, WF Deferred Compensation Holdings, Inc. We have guaranteed its obligations under the plan. Participants have no direct interest in any of the earnings options and are general unsecured creditors of the plan sponsor and the Company with respect to their deferred compensation benefits under the plan.

Norwest Corporation Directors' Formula Stock Award Plan. Under the Norwest Corporation Directors' Formula Stock Award Plan we awarded shares of common stock to non-employee directors. The plan allowed participants to defer receipt of all or a portion of their awards, with dividends reinvested, until a future year or years as selected by the participants subject to the terms of the plan. Participants can elect one time to defer commencement of distribution of their deferral accounts if the election is made sufficiently in advance of the original distribution commencement date and the new distribution commencement date is sufficiently beyond the original distribution commencement date. Participants have no direct interest in the shares deferred under the plan and are general unsecured creditors of the Company with respect to payment of their deferred stock awards under the plan. No future stock awards or deferrals may be made under this plan.

ADDITIONAL INFORMATION

Additional information in response to this Item 12 can be found in the Company's 2021 Proxy Statement under "Ownership of Our Common Stock – Directors and Executive Officers – Director and Executive Officer Stock Ownership Table" and "Ownership of Our Common Stock – Principal Shareholders." That information is incorporated into this item by reference.

ITEM 13. CERTAIN RELATIONSHIPS AND RELATED TRANSACTIONS, AND DIRECTOR INDEPENDENCE

Information in response to this Item 13 can be found in the Company's 2021 Proxy Statement under "Corporate Governance – Item 1 – Election of Directors – Director Independence" and under "Information About Related Persons." That information is incorporated into this item by reference.

ITEM 14. PRINCIPAL ACCOUNTING FEES AND SERVICES

Information in response to this Item 14 can be found in the Company's 2021 Proxy Statement under "Audit Matters – Item 3 – Ratify Appointment of Independent Registered Public Accounting Firm for 2021 – KPMG Fees" and "Audit Matters – Item 3 – Ratify Appointment of Independent Registered Public Accounting Firm for 2021 – Audit Committee Pre-Approval Policies and Procedures." That information is incorporated into this item by reference.

PART IV

ITEM 15. EXHIBITS AND FINANCIAL STATEMENT SCHEDULES

1. FINANCIAL STATEMENTS

The Company's consolidated financial statements, including the Notes thereto, and the report of the independent registered public accounting firm thereon, are set forth in the 2020 Annual Report to Shareholders, and are incorporated into this item by reference.

2. FINANCIAL STATEMENT SCHEDULES

All financial statement schedules for the Company have been included in the consolidated financial statements or the related footnotes, or are either inapplicable or not required.

3. EXHIBITS

A list of exhibits to this Form 10-K is set forth below. Shareholders may obtain a copy of any of the following exhibits, upon payment of a reasonable fee, by writing to Wells Fargo & Company, Office of the Corporate Secretary, MAC D1130-117, 301 S. Tryon Street, 11th Floor, Charlotte, North Carolina 28282.

The Company's SEC file number is 001-2979. On and before November 2, 1998, the Company filed documents with the SEC under the name Norwest Corporation. The former Wells Fargo & Company filed documents under SEC file number 001-6214. The former Wachovia Corporation filed documents under SEC file number 001-10000.

	Amendment to Supplemental 401(k) Plan, effective January 1, 2020.	Incorporated by reference to Exhibit 10(b) to the Company's Quarterly Report on Form 10-Q for the quarter ended June 30, 2020.
	Amendment to Supplemental 401(k) Plan, effective December 31, 2018.	Incorporated by reference to Exhibit 10(i) to the Company's Annual Report on Form 10-K for the year ended December 31, 2018.
	Amendment to Supplemental 401(k) Plan, effective July 1, 2017.	Incorporated by reference to Exhibit 10(d) to the Company's Quarterly Report on Form 10-Q for the quarter ended June 30, 2017.
	Amendment to Supplemental 401(k) Plan, effective January 1, 2015.	Incorporated by reference to Exhibit 10(b) to the Company's Quarterly Report on Form 10-Q for the quarter ended June 30, 2014.
10(g)*	Supplemental Cash Balance Plan.	Incorporated by reference to Exhibit 10(b) to the Company's Current Report on Form 8-K filed May 4, 2009.
	Amendment to Supplemental Cash Balance Plan, effective January 1, 2020.	Incorporated by reference to Exhibit 10(c) to the Company's Quarterly Report on Form 10-Q for the quarter ended June 30, 2020.
	Amendment to Supplemental Cash Balance Plan, effective February 1, 2019.	Incorporated by reference to Exhibit 10(j) to the Company's Annual Report on Form 10-K for the year ended December 31, 2018.
	Amendment to Supplemental Cash Balance Plan, effective December 31, 2018.	Incorporated by reference to Exhibit 10(h) to the Company's Annual Report on Form 10-K for the year ended December 31, 2019.
	Amendment to Supplemental Cash Balance Plan, effective July 1, 2017.	Incorporated by reference to Exhibit 10(e) to the Company's Quarterly Report on Form 10-Q for the quarter ended June 30, 2017.
10(h)*	Supplemental Long-Term Disability Plan.	Incorporated by reference to Exhibit 10(f) to the Company's Annual Report on Form 10-K for the year ended December 31, 1990.
	Amendment to Supplemental Long-Term Disability Plan.	Incorporated by reference to Exhibit 10(g) to the Company's Annual Report on Form 10-K for the year ended December 31, 1992.
10(i)*	Description of Relocation Program.	Incorporated by reference to Exhibit 10(y) to the Company's Annual Report on Form 10-K for the year ended December 31, 2003.
10(j)*	Description of Chairman/CEO Post-Retirement Policy.	Incorporated by reference to Exhibit 10(w) to the Company's Annual Report on Form 10-K for the year ended December 31, 2008.
10(k)*	Description of the Company's Non-Employee Director Equity Compensation Program, effective January 1, 2016.	Incorporated by reference to Exhibit 10(q) to the Company's Annual Report on Form 10-K for the year ended December 31, 2015.
10(l)*	Description of Wells Fargo Bank, N.A. Director Compensation Program, effective January 1, 2015.	Incorporated by reference to Exhibit 10(s) to the Company's Annual Report on Form 10-K for the year ended December 31, 2014.
10(m)*	Amended and Restated Wachovia Corporation Deferred Compensation Plan for Non-Employee Directors.	Incorporated by reference to Exhibit (10)(f) to Wachovia Corporation's Current Report on Form 8-K filed December 29, 2008.
	Amendment to Amended and Restated Wachovia Corporation Deferred Compensation Plan for Non-Employee Directors, effective June 1, 2009.	Incorporated by reference to Exhibit 10(aa) to the Company's Annual Report on Form 10-K for the year ended December 31, 2009.
10(n)*	Wachovia Corporation Executive Deferred Compensation Plan.	Incorporated by reference to Exhibit (10)(d) to Wachovia Corporation's Annual Report on Form 10-K for the year ended December 31, 1997.
10(o)*	Wachovia Corporation Supplemental Executive Long-Term Disability Plan, as amended and restated.	Incorporated by reference to Exhibit (99) to Wachovia Corporation's Current Report on Form 8-K filed January 5, 2005.

<u>Exhibit Number</u>	<u>Description</u>	<u>Location</u>
10(p)*	Amended and Restated Wachovia Corporation Savings Restoration Plan.	Incorporated by reference to Exhibit 10(b) to Wachovia Corporation's Current Report on Form 8-K filed December 29, 2008.
	Wachovia Corporation Savings Restoration Plan.	Incorporated by reference to Exhibit 10(gg) to Wachovia Corporation's Annual Report on Form 10-K for the year ended December 31, 2002.
	Amendment to Wachovia Corporation Savings Restoration Plan, effective January 1, 2020.	Incorporated by reference to Exhibit 10(a) to the Company's Quarterly Report on Form 10-Q for the quarter ended June 30, 2020.
	Amendment to Wachovia Corporation Savings Restoration Plan, effective December 31, 2018.	Incorporated by reference to Exhibit 10(s) to the Company's Annual Report on Form 10-K for the year ended December 31, 2018.
	Amendment to Wachovia Corporation Savings Restoration Plan, effective July 1, 2017.	Incorporated by reference to Exhibit 10(f) to the Company's Quarterly Report on Form 10-Q for the quarter ended June 30, 2017.
	Amendments to Wachovia Corporation Savings Restoration Plan, effective August 1, 2016.	Incorporated by reference to Exhibit 10(b) to the Company's Quarterly Report on Form 10-Q for the quarter ended June 30, 2016.
	Amendment 2008-1 to Wachovia Corporation Savings Restoration Plan.	Incorporated by reference to Exhibit 10(c) to Wachovia Corporation's Current Report on Form 8-K filed December 29, 2008.
	Amendment 2007-1 to Wachovia Corporation Savings Restoration Plan.	Incorporated by reference to Exhibit 10(b) to Wachovia Corporation's Current Report on Form 8-K filed December 20, 2007.
10(q)*	Amended and Restated Wachovia Corporation 2003 Stock Incentive Plan.	Incorporated by reference to Appendix E to Wachovia Corporation's Registration Statement on Form S-4 (Reg. No. 333-134656) filed on July 24, 2006.
	Amendment to Amended and Restated Wachovia Corporation 2003 Stock Incentive Plan, effective February 24, 2009.	Incorporated by reference to Exhibit 10(b) to the Company's Quarterly Report on Form 10-Q for the quarter ended March 31, 2009.
	Form of stock award agreement for employees of Wachovia Corporation, including Jonathan Weiss.	Incorporated by reference to Exhibit 10(g) to the Company's Quarterly Report on Form 10-Q for the quarter ended June 30, 2017.
10(r)*	Amended and Restated SouthTrust Corporation Additional Retirement Benefit Plan (Pension) effective July 15, 1992, Addendum thereto dated April 20, 1994, and Amendment 2008-1 thereto dated December 29, 2008.	Incorporated by reference to Exhibit 10(bb) to the Company's Annual Report on Form 10-K for the year ended December 31, 2014.
10(s)*	Key/Specified Employee Policy.	Incorporated by reference to Exhibit 10(v) to the Company's Annual Report on Form 10-K for the year ended December 31, 2018.
10(t)*	Offer Letter to Charles W. Scharf, dated September 26, 2019.	Incorporated by reference to Exhibit 10(a) to the Company's Current Report on Form 8-K filed September 27, 2019.

Note 15: Legal Actions

Wells Fargo and certain of our subsidiaries are involved in a number of judicial, regulatory, governmental, arbitration, and other proceedings or investigations concerning matters arising from the conduct of our business activities, and many of those proceedings and investigations expose Wells Fargo to potential financial loss. These proceedings and investigations include actions brought against Wells Fargo and/or our subsidiaries with respect to corporate-related matters and transactions in which Wells Fargo and/or our subsidiaries were involved. In addition, Wells Fargo and our subsidiaries may be requested to provide information or otherwise cooperate with government authorities in the conduct of investigations of other persons or industry groups.

Although there can be no assurance as to the ultimate outcome, Wells Fargo and/or our subsidiaries have generally denied, or believe we have a meritorious defense and will deny, liability in all significant legal actions pending against us, including the matters described below, and we intend to defend vigorously each case, other than matters we describe as having settled. We establish accruals for legal actions when potential losses associated with the actions become probable and the costs can be reasonably estimated. For such accruals, we record the amount we consider to be the best estimate within a range of potential losses that are both probable and estimable; however, if we cannot determine a best estimate, then we record the low end of the range of those potential losses. The actual costs of resolving legal actions may be substantially higher or lower than the amounts accrued for those actions.

ATM ACCESS FEE LITIGATION In October 2011, plaintiffs filed a putative class action, *Mackmin, et al. v. Visa, Inc. et al.*, against Wells Fargo & Company, Wells Fargo Bank, N.A., Visa, MasterCard, and several other banks in the United States District Court for the District of Columbia. Plaintiffs allege that the Visa and MasterCard requirement that if an ATM operator charges an access fee on Visa and MasterCard transactions, then that fee cannot be greater than the access fee charged for transactions on other networks, violates antitrust rules. Plaintiffs seek treble damages, restitution, injunctive relief, and attorneys' fees where available under federal and state law. Two other antitrust cases that make similar allegations were filed in the same court, but these cases did not name Wells Fargo as a defendant. On February 13, 2013, the district court granted defendants' motions to dismiss the three actions. Plaintiffs appealed the dismissals and, on August 4, 2015, the United States Court of Appeals for the District of Columbia Circuit vacated the district court's decisions and remanded the three cases to the district court for further proceedings. On June 28, 2016, the United States Supreme Court granted defendants' petitions for writ of certiorari to review the decisions of the United States Court of Appeals for the District of Columbia. On November 17, 2016, the United States Supreme Court dismissed the petitions as improvidently granted, and the three cases returned to the district court for further proceedings. The Company has entered into an agreement pursuant to which the Company will pay \$20.8 million to resolve the cases, subject to court approval.

AUTOMOBILE LENDING MATTERS On April 20, 2018, the Company entered into consent orders with the Office of the Comptroller of the Currency (OCC) and the Consumer Financial Protection Bureau (CFPB) to resolve, among other things, investigations by the agencies into the Company's compliance risk management

program and its past practices involving certain automobile collateral protection insurance (CPI) policies and certain mortgage interest rate lock extensions. The consent orders require remediation to customers and the payment of a total of \$1.0 billion in civil money penalties to the agencies. In July 2017, the Company announced a plan to remediate customers who may have been financially harmed due to issues related to automobile CPI policies purchased through a third-party vendor on their behalf. Multiple putative class action cases alleging, among other things, unfair and deceptive practices relating to these CPI policies, have been filed against the Company and consolidated into one multi-district litigation in the United States District Court for the Central District of California. The Company has reached an agreement to resolve the multi-district litigation pursuant to which the Company has agreed to pay, consistent with its remediation obligations under the consent orders, approximately \$689 million in remediation to customers with CPI policies placed between October 15, 2005, and September 30, 2016. The settlement amount is not incremental to the Company's remediation obligations under the consent orders, but instead encompasses those obligations, including remediation payments to date. The settlement amount is subject to change as the Company finalizes its remediation activity under the consent orders. In addition, the Company has agreed to contribute \$1 million to a common fund for the class. The district court granted final approval of the settlement on November 21, 2019. A putative class of shareholders also filed a securities fraud class action against the Company and its executive officers alleging material misstatements and omissions of CPI-related information in the Company's public disclosures. In January 2020, the court dismissed this action as to all defendants except the Company and a former executive officer and limited the action to two alleged misstatements. In addition, the Company is subject to a class action lawsuit in the United States District Court for the Central District of California alleging that customers are entitled to refunds related to the unused portion of guaranteed automobile protection (GAP) waiver or insurance agreements between the customer and dealer and, by assignment, the lender. Allegations related to the CPI and GAP programs are among the subjects of a shareholder derivative lawsuit pending in the United States District Court for the Northern District of California. These and other issues related to the origination, servicing, and collection of consumer auto loans, including related insurance products, have also subjected the Company to formal or informal inquiries, investigations, or examinations from federal and state government agencies. In December 2018, the Company entered into an agreement with all 50 state Attorneys General and the District of Columbia to resolve an investigation into the Company's retail sales practices, CPI and GAP, and mortgage interest rate lock matters, pursuant to which the Company paid \$575 million.

BANK SECRECY ACT/ANTI-MONEY LAUNDERING CONSENT ORDER INVESTIGATION On November 19, 2015, the Company entered into a consent order with the OCC, pursuant to which the Company was required to implement customer due diligence standards that include collection of current beneficial ownership information for certain business customers. On January 4, 2021, the OCC terminated the consent order. The Company has responded to inquiries from various federal government agencies regarding potentially inappropriate conduct in connection with the collection of beneficial ownership information.

COMMERCIAL LENDING SHAREHOLDER LITIGATION In October and November 2020, plaintiffs filed two putative class action lawsuits in the United States District Court for the Northern District of California alleging that the Company and certain of its former executive officers made false and misleading statements or omissions regarding, among other things, the Company's commercial lending underwriting practices, the credit quality of its commercial credit portfolios, and the value of its commercial loans, collateralized loan obligations and commercial mortgage-backed securities.

CONSENT ORDER DISCLOSURE LITIGATION Wells Fargo shareholders have brought a securities fraud class action in the United States District Court for the Southern District of New York alleging that the Company and certain of its current and former executive officers and directors made false or misleading statements regarding the Company's efforts to comply with the February 2018 consent order with the Federal Reserve Board and the April 2018 consent orders with the CFPB and OCC. Allegations related to the Company's efforts to comply with these three consent orders are also among the subjects of a shareholder derivative lawsuit pending in the United States District Court for the Northern District of California.

CONSUMER DEPOSIT ACCOUNT RELATED REGULATORY INVESTIGATION The CFPB is conducting an investigation into whether customers were unduly harmed by the Company's historical practices associated with the freezing (and, in many cases, closing) of consumer deposit accounts after the Company detected suspected fraudulent activity (by third parties or account holders) that affected those accounts.

CORONAVIRUS AID, RELIEF, AND ECONOMIC SECURITY ACT/ PAYCHECK PROTECTION PROGRAM Plaintiffs have filed putative class actions in various federal courts against the Company. The actions seek damages and injunctive relief related to the Company's offering of Paycheck Protection Program (PPP) loans under the Coronavirus Aid, Relief, and Economic Security Act, as well as claims for fees by purported agents who allegedly assisted customers with preparing PPP loan applications submitted to the Company. The Company has also received formal and informal inquiries from federal and state government agencies regarding its offering of PPP loans. In addition, Wells Fargo shareholders brought a securities fraud class action in the United States District Court for the Northern District of California alleging that the Company and certain of its executive officers made false or misleading statements regarding the Company's participation in the PPP and the Company's compliance with related regulations, which has been voluntarily dismissed.

FOREIGN EXCHANGE BUSINESS The United States Department of Justice (Department of Justice) is investigating certain activities in the Company's foreign exchange business, including whether customers may have received pricing inconsistent with commitments made to those customers. Previous investigations by other federal government agencies have been resolved.

INTERCHANGE LITIGATION Plaintiffs representing a putative class of merchants have filed putative class actions, and individual merchants have filed individual actions, against Wells Fargo Bank, N.A., Wells Fargo & Company, Wachovia Bank, N.A., and Wachovia Corporation regarding the interchange fees associated with Visa and MasterCard payment card transactions. Visa, MasterCard, and several other banks and bank holding companies are also named as defendants in these actions. These

actions have been consolidated in the United States District Court for the Eastern District of New York. The amended and consolidated complaint asserts claims against defendants based on alleged violations of federal and state antitrust laws and seeks damages, as well as injunctive relief. Plaintiff merchants allege that Visa, MasterCard, and payment card issuing banks unlawfully colluded to set interchange rates. Plaintiffs also allege that enforcement of certain Visa and MasterCard rules and alleged tying and bundling of services offered to merchants are anticompetitive. Wells Fargo and Wachovia, along with other defendants and entities, are parties to Loss and Judgment Sharing Agreements, which provide that they, along with other entities, will share, based on a formula, in any losses from the Interchange Litigation. On July 13, 2012, Visa, MasterCard, and the financial institution defendants, including Wells Fargo, signed a memorandum of understanding with plaintiff merchants to resolve the consolidated class action and reached a separate settlement in principle of the consolidated individual actions. The settlement payments to be made by all defendants in the consolidated class and individual actions totaled approximately \$6.6 billion before reductions applicable to certain merchants opting out of the settlement. The class settlement also provided for the distribution to class merchants of 10 basis points of default interchange across all credit rate categories for a period of eight consecutive months. The district court granted final approval of the settlement, which was appealed to the United States Court of Appeals for the Second Circuit by settlement objector merchants. Other merchants opted out of the settlement and are pursuing several individual actions. On June 30, 2016, the Second Circuit vacated the settlement agreement and reversed and remanded the consolidated action to the United States District Court for the Eastern District of New York for further proceedings. On November 23, 2016, prior class counsel filed a petition to the United States Supreme Court, seeking review of the reversal of the settlement by the Second Circuit, and the Supreme Court denied the petition on March 27, 2017. On November 30, 2016, the district court appointed lead class counsel for a damages class and an equitable relief class. The parties have entered into a settlement agreement to resolve the money damages class claims pursuant to which defendants will pay a total of approximately \$6.2 billion, which includes approximately \$5.3 billion of funds remaining from the 2012 settlement and \$900 million in additional funding. The Company's allocated responsibility for the additional funding is approximately \$94.5 million. The court granted final approval of the settlement on December 13, 2019, which was appealed to the United States Court of Appeals for the Second Circuit by settlement objector merchants. Several of the opt-out and direct action litigations have been settled while others remain pending. Discovery is proceeding in the opt-out litigations and the equitable relief class case.

LOW INCOME HOUSING TAX CREDITS Federal government agencies have undertaken formal or informal inquiries or investigations regarding the manner in which the Company purchased, and negotiated the purchase of, certain federal low income housing tax credits in connection with the financing of low income housing developments.

MOBILE DEPOSIT PATENT LITIGATION The Company is a defendant in two separate cases brought by United Services Automobile Association (USAA) in the United States District Court for the Eastern District of Texas alleging claims of patent infringement regarding mobile deposit capture technology patents held by USAA. Trial in the first case commenced on

Note 15: Legal Actions (continued)

October 30, 2019, and resulted in a \$200 million verdict against the Company. Trial in the second case commenced on January 6, 2020, and resulted in a \$102.7 million verdict against the Company. The Company has filed post-trial motions to, among other things, vacate the verdicts, and USAA has filed post-trial motions seeking future royalty payments and damages for willful infringement. In February 2021, the Company reached an agreement to settle the cases with USAA and obtained a license to the patents at issue.

MORTGAGE LOAN MODIFICATION MATTERS Plaintiffs representing a putative class of mortgage borrowers have filed separate putative class actions, *Hernandez v. Wells Fargo, et al.*, *Coordes v. Wells Fargo, et al.*, *Ryder v. Wells Fargo, Liguori v. Wells Fargo*, and *Dore v. Wells Fargo*, against Wells Fargo Bank, N.A., in the United States District Court for the Northern District of California, the United States District Court for the District of Washington, the United States District Court for the Southern District of Ohio, the United States District Court for the Southern District of New York, and the United States District Court for the Western District of Pennsylvania, respectively. Plaintiffs allege that Wells Fargo improperly denied mortgage loan modifications or repayment plans to customers in the foreclosure process due to the overstatement of foreclosure attorneys' fees that were included for purposes of determining whether a customer in the foreclosure process qualified for a mortgage loan modification or repayment plan. In March 2020, the Company entered into an agreement pursuant to which the Company paid \$18.5 million to resolve the claims of the initial certified class in the *Hernandez* case, which was approved by the district court in October 2020. The *Hernandez* settlement has been reopened to include additional borrowers who the Company determined should have been included in the settlement class because the Company identified a population of additional borrowers during the relevant class period whose loans had not previously been reviewed for inclusion in the original population of impacted customers. The identification of these additional borrowers will increase the potential class of mortgage borrowers in the other pending matters. In addition, government agencies have undertaken formal or informal inquiries or investigations regarding these and other mortgage servicing matters.

NOMURA/NATIXIS MORTGAGE-RELATED LITIGATION In August 2014 and August 2015, Nomura Credit & Capital Inc. (Nomura) and Natixis Real Estate Holdings, LLC (Natixis) filed a total of seven third-party complaints against Wells Fargo Bank, N.A., in New York state court. In the underlying first-party actions, Nomura and Natixis have been sued for alleged breaches of representations and warranties made in connection with residential mortgage-backed securities sponsored by them. In the third-party actions, Nomura and Natixis allege that Wells Fargo, as master servicer, primary servicer or securities administrator, failed to notify Nomura and Natixis of their own breaches, failed to properly oversee the primary servicers, and failed to adhere to accepted servicing practices. Natixis additionally alleges that Wells Fargo failed to perform default oversight duties. Wells Fargo has asserted counterclaims alleging that Nomura and Natixis failed to provide Wells Fargo notice of their representation and warranty breaches.

OFAC RELATED INVESTIGATION The Company has self-identified an issue whereby certain foreign banks utilized a Wells Fargo software-based solution to conduct import/export trade-related financing transactions with countries and entities prohibited by

the Office of Foreign Assets Control (OFAC) of the United States Department of the Treasury. We do not believe any funds related to these transactions flowed through accounts at Wells Fargo as a result of the aforementioned conduct. The Company has made voluntary self-disclosures to OFAC and is cooperating with an inquiry from the Department of Justice.

ORDER OF POSTING LITIGATION Plaintiffs filed a series of putative class actions against Wachovia Bank, N.A., and Wells Fargo Bank, N.A., as well as many other banks, challenging the "high to low" order in which the banks post debit card transactions to consumer deposit accounts. Most of these actions were consolidated in multi-district litigation proceedings (MDL proceedings) in the United States District Court for the Southern District of Florida. The court in the MDL proceedings has certified a class of putative plaintiffs, and Wells Fargo moved to compel arbitration of the claims of unnamed class members. The court denied the motions to compel arbitration in October 2016, and Wells Fargo appealed this decision to the United States Court of Appeals for the Eleventh Circuit. In May 2018, the Eleventh Circuit ruled in Wells Fargo's favor and found that Wells Fargo had not waived its arbitration rights and remanded the case to the district court for further proceedings. On September 26, 2019, the district court entered an order granting Wells Fargo's motion and dismissed the claims of unnamed class members in favor of arbitration. Plaintiffs appealed this decision to the United States Court of Appeals for the Eleventh Circuit.

RETAIL SALES PRACTICES MATTERS A number of bodies or entities, including (a) federal, state, and local government agencies, including the Department of Justice, the United States Securities and Exchange Commission (SEC), and the United States Department of Labor, (b) state attorneys general, including the New York Attorney General, and (c) Congressional committees, have undertaken formal or informal inquiries, investigations, or examinations arising out of certain retail sales practices of the Company that were the subject of settlements with the CFPB, the OCC, and the Office of the Los Angeles City Attorney announced by the Company on September 8, 2016. These matters are at varying stages. The Company has responded, and continues to respond, to requests from certain of the foregoing. In October 2018, the Company entered into an agreement to resolve the New York Attorney General's investigation pursuant to which the Company paid \$65 million to the State of New York. In December 2018, the Company entered into an agreement with all 50 state Attorneys General and the District of Columbia to resolve an investigation into the Company's retail sales practices, CPI and GAP, and mortgage interest rate lock matters, pursuant to which the Company paid \$575 million. On February 21, 2020, the Company entered into an agreement with the Department of Justice to resolve the Department of Justice's criminal investigation into the Company's retail sales practices, as well as a separate agreement to resolve the Department of Justice's civil investigation. As part of the Department of Justice criminal settlement, no charges will be filed against the Company provided the Company abides by all the terms of the agreement. The Department of Justice criminal settlement also includes the Company's agreement that the facts set forth in the settlement document constitute sufficient facts for the finding of criminal violations of statutes regarding bank records and personal information. On February 21, 2020, the Company also entered into an order to resolve the SEC's investigation arising out of the Company's retail sales practices. The SEC order contains a finding, to which the Company consented, that the facts set forth include violations of Section

10(b) of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder. As part of the resolution of the Department of Justice and SEC investigations, the Company has agreed to make payments totaling \$3.0 billion. In addition, as part of the settlements and included in the \$3.0 billion amount, the Company has agreed to the creation of a \$500 million Fair Fund for the benefit of investors who were harmed by the conduct covered in the SEC settlement.

In addition, a number of lawsuits have been filed by non-governmental parties seeking damages or other remedies related to these retail sales practices. First, various class plaintiffs, purporting to represent consumers who allege that they received products or services without their authorization or consent, have brought separate putative class actions against the Company in the United States District Court for the Northern District of California and various other jurisdictions. On June 14, 2018, the district court granted final approval of a settlement entered into by the Company in the first-filed action, *Jabbari v. Wells Fargo Bank, N.A.*, pursuant to which the Company paid \$142 million to resolve claims regarding certain products or services provided without authorization or consent for the time period May 1, 2002 to April 20, 2017. On July 20, 2020, the United States Court of Appeals for the Ninth Circuit affirmed the district court's order granting final approval of the settlement. Second, the Company was subject to a consolidated securities fraud class action alleging certain misstatements and omissions in the Company's disclosures related to sales practices matters. The Company entered into a settlement agreement to resolve this matter pursuant to which the Company paid \$480 million. Third, Wells Fargo shareholders have brought numerous shareholder derivative lawsuits asserting breach of fiduciary duty claims against, among others, current and former directors and officers for their alleged involvement with and failure to detect and prevent sales practices issues. The parties have entered into settlement agreements to resolve these lawsuits pursuant to which insurance carriers will pay the Company approximately \$240 million for alleged damage to the Company, and the Company will pay plaintiffs' attorneys' fees. The settlement agreements have received final approval from the courts. Fourth, a purported Employee Retirement Income Security Act (ERISA) class action was filed in the United States District Court for the District of Minnesota on behalf of 401(k) plan participants. The district court dismissed the action, and on July 27, 2020, the United States Court of Appeals for the Eighth Circuit affirmed the dismissal. The 401(k) plan participants have filed a writ of certiorari to the United States Supreme Court.

RMBS TRUSTEE LITIGATION In December 2014, Phoenix Light SF Limited and certain related entities and the National Credit Union Administration (NCUA) filed complaints in the United States District Court for the Southern District of New York against Wells Fargo Bank, N.A., alleging claims against the Company in its capacity as trustee for a number of residential mortgage-backed securities trusts. Complaints raising similar allegations have been filed by Commerzbank AG in the Southern District of New York and by IKB International and IKB Deutsche Industriebank in New York state court. In each case, the plaintiffs allege that Wells Fargo Bank, N.A., as trustee, caused losses to investors, and plaintiffs assert causes of action based upon, among other things, the trustee's alleged failure to notify and enforce repurchase obligations of mortgage loan sellers for purported breaches of representations and warranties, notify investors of alleged events of default, and abide by appropriate standards of care following alleged events of default. The Company previously settled two class action lawsuits with similar allegations that

were filed in November 2014 and December 2016 by institutional investors in the Southern District of New York and New York state court, respectively.

SEMINOLE TRIBE TRUSTEE LITIGATION The Seminole Tribe of Florida filed a complaint in Florida state court alleging that Wells Fargo, as trustee, charged excess fees in connection with the administration of a minor's trust and failed to invest the assets of the trust prudently. The complaint was later amended to include three individual current and former beneficiaries as plaintiffs and to remove the Tribe as a party to the case. In December 2016, the Company filed a motion to dismiss the amended complaint on the grounds that the Tribe is a necessary party and that the individual beneficiaries lack standing to bring claims. The motion was denied in June 2018. The case is pending trial.

OUTLOOK As described above, the Company establishes accruals for legal actions when potential losses associated with the actions become probable and the costs can be reasonably estimated. The high end of the range of reasonably possible potential losses in excess of the Company's accrual for probable and estimable losses was approximately \$2.4 billion as of December 31, 2020. The outcomes of legal actions are unpredictable and subject to significant uncertainties, and it is inherently difficult to determine whether any loss is probable or even possible. It is also inherently difficult to estimate the amount of any loss and there may be matters for which a loss is probable or reasonably possible but not currently estimable. Accordingly, actual losses may be in excess of the established accrual or the range of reasonably possible loss. Wells Fargo is unable to determine whether the ultimate resolution of the retail sales practices matters will have a material adverse effect on its consolidated financial condition. Based on information currently available, advice of counsel, available insurance coverage, and established reserves, Wells Fargo believes that the eventual outcome of other actions against Wells Fargo and/or its subsidiaries will not, individually or in the aggregate, have a material adverse effect on Wells Fargo's consolidated financial condition. However, it is possible that the ultimate resolution of a matter, if unfavorable, may be material to Wells Fargo's results of operations for any particular period.

ATTACHMENT
“D”

ATTACHMENT TO SECTION V, PART B-CERTAIN OFFENSES INVOLVING CCC AND
SISTER AGENCIES AND SECTION V, PART C-FURTHER CERTIFICATIONS

Inclusive of the paragraphs that follow, the Applicant certifies the accuracy of the certifications contained in Section V, paragraphs B and C (to its most current certification) only as to itself, and certifies that to the best of the Applicant’s knowledge after due inquiry, and as of January 2021, the statements in paragraphs B are accurate with respect to the executive officers and directors of the Applicant identified in Section II.B.1.

As with any large diversified financial services company of its size in the highly-regulated banking and securities field, Wells Fargo Bank, N.A. and Wells Fargo & Company (collectively, “Wells Fargo”) are subject to receiving inquiries and subpoenas from regulators and law enforcement from time to time, as well as being subject to civil litigation. Wells Fargo responds regularly to inquiries and investigations by governmental entities and, as a highly regulated diversified financial institution has in the past entered into settlements of some of those investigations, including those specified below.

Wells Fargo Bank, N.A. (“WFBNA”) has paid municipal fines and judgments in connection with alleged violations of local housing laws (regarding certain homes the bank repossessed or that were subject to mortgages in which the Bank had a legal interest or role), some of which are characterized as misdemeanors. However, there have been no judgments, injunctions or liens arising out of such litigations or proceedings in the last five years that would materially impair Wells Fargo’s ability as of this date to conduct its business or meet its obligations under the transaction to which this EDS relates.

During the third quarter of 2016, WFBNA entered into settlement agreements with the City of Los Angeles, the Consumer Financial Protection Bureau and the Office of the Comptroller of the Currency regarding certain sales practices. See press release dated September 8, 2016 at https://www.wellsfargo.com/about/press/2016/sales-practices-agreements_0908.content (the “2016 Settlement”).

Following the announcement of the 2016 Settlement discussed above, certain state and local governmental bodies and municipal entities have temporarily suspended or removed WFBNA from providing certain commercial and investment banking services.

The Community Reinvestment Act (“CRA”) of 1977 requires banks to meet the credit needs of all the communities where they do business, especially low- and moderate-income communities. In its most recent CRA Performance Evaluation, which covers the years 2012-2018, the Office of the Comptroller of the Currency (“OCC”) gave WFBNA an overall CRA rating of “Outstanding.” In its current Performance Evaluation, the OCC recognized WFBNA for being “a leader in making community development loans,” and cited our “significant use of innovative and/or flexible loan products” to meet credit needs. The Performance Evaluation also noted that WFBNA’s retail banking options are accessible in a majority of the areas surveyed and that we serve our customers through full-service ATMs, phone banking, online and mobile banking, and mobile payments. On the individual components of the Performance Evaluation, WFBNA received an “Outstanding” on the Lending Test, a “High Satisfactory” on the Investment Test, and a “High Satisfactory” on the Service Test. A copy of WFBNA’s most recent Performance Evaluation is available at the following link: <https://www.wellsfargo.com/about/corporate-responsibility/economic-empowerment/>.

On February 2, 2018, Wells Fargo & Company (the “Company”) entered into a consent order with the Federal Reserve Board (“FRB”).

On April 20, 2018, the Company entered into consent orders with the Consumer Financial Protection Bureau and the Office of the Comptroller of the Currency to pay an aggregate of \$1 billion in civil money penalties to resolve matters regarding the Company's compliance risk management program and past practices involving certain automobile collateral protection insurance policies and certain mortgage interest rate lock extensions.

In August 2018, the Company announced that it entered into an agreement with the U.S. Department of Justice (DOJ) to resolve a previously disclosed investigation by the DOJ regarding claims related to certain 2005–07 residential mortgage-backed securities activities.

On December 4, 2018, the Company reached an agreement with the Attorney General of the State of Illinois, pursuant to which it agreed to pay \$17.25 million in remediation relating to certain prior mortgage-backed securities activities.

On December 28, 2018, the Company entered into a settlement with all 50 state Attorneys General and the District of Columbia regarding previously disclosed retail sales practices, auto collateral protection insurance and guaranteed asset/auto protection, and mortgage interest rate lock matters.

On February 21, 2020, the Company entered into settlements with the U.S. Department of Justice and the U.S. Securities and Exchange Commission to resolve these agencies' investigations into Community Bank sales practices and related disclosures.

On September 9, 2021, the OCC announced an enforcement action against WFBNA related to loss mitigation practices in its Home Lending business, as well as a \$250 million civil monetary penalty related to those loss mitigation practices and insufficient progress in addressing requirements under the OCC's April 2018 consent order. For additional information, see the press release at [Wells Fargo Newsroom - Wells Fargo Issues Statement on OCC Enforcement Action, Expiration of CFPB Consent Order \(wf.com\)](#).

On September 27, 2021, the Company reached an agreement with the United States District Court for the Southern District of New York pursuant to which the Company paid \$37.5 million to the United States and provided customer remediation in order to resolve an investigation related to certain activities in the Company's foreign exchange business, including whether customers may have received pricing inconsistent with commitments made to those customers.

Also in the ordinary course of its business, Wells Fargo regularly enters into financial transactions of various types with public entities throughout the United States. It is possible that one or more public entities have terminated a transaction for cause or default.

For a description of certain legal proceedings, please see the Wells Fargo & Company's SEC filings 2021 10-Q (Q1 & Q2) and 2020 10-K <https://www.wellsfargo.com/about/investor-relations/filings/> a summary of which are on file with the City and our 2020 Annual Report, <https://www.wellsfargo.com/about/investor-relations/annual-reports/>. For your ease of use, please see attached a copy of our Legal Actions as reported in our 2020 Annual Report, and 2021 10-Q (Q1 & Q2) and our 2020 10-K.

**CITY OF CHICAGO
ECONOMIC DISCLOSURE STATEMENT
AND AFFIDAVIT**

SECTION I -- GENERAL INFORMATION

A. Legal name of the Disclosing Party submitting this EDS. Include d/b/a/ if applicable:

WFC Holdings, LLC

Check ONE of the following three boxes:

Indicate whether the Disclosing Party submitting this EDS is:

1. the Applicant

OR

2. a legal entity currently holding, or anticipated to hold within six months after City action on the contract, transaction or other undertaking to which this EDS pertains (referred to below as the "Matter"), a direct or indirect interest in excess of 7.5% in the Applicant. State the Applicant's legal name: _____

OR

3. a legal entity with a direct or indirect right of control of the Applicant (see Section II(B)(1)) State the legal name of the entity in which the Disclosing Party holds a right of control:

Wells Fargo Bank, N.A.

B. Business address of the Disclosing Party: 420 Montgomery Street, San Francisco, CA 94163

C. Telephone: 312-630-2234 Fax: Not available

Email: Mark.Lester@wellsfargo.com

D. Name of contact person: Mark Lester

E. Federal Employer Identification No. (if you have one): 41-1921346

F. Brief description of the Matter to which this EDS pertains. (Include project number and location of property, if applicable):

Banking Services

G. Which City agency or department is requesting this EDS? Office of Finance

If the Matter is a contract being handled by the City's Department of Procurement Services, please complete the following:

Specification # 1231948 and Contract # _____

SECTION II -- DISCLOSURE OF OWNERSHIP INTERESTS

A. NATURE OF THE DISCLOSING PARTY

1. Indicate the nature of the Disclosing Party:

- Person Limited liability company
- Publicly registered business corporation Limited liability partnership
- Privately held business corporation Joint venture
- Sole proprietorship Not-for-profit corporation
- General partnership (Is the not-for-profit corporation also a 501(c)(3))?
- Limited partnership Yes No
- Trust Other (please specify)

2. For legal entities, the state (or foreign country) of incorporation or organization, if applicable:

Delaware

3. For legal entities not organized in the State of Illinois: Has the organization registered to do business in the State of Illinois as a foreign entity?

- Yes No Organized in Illinois

B. IF THE DISCLOSING PARTY IS A LEGAL ENTITY:

1. List below the full names and titles, if applicable, of: (i) all executive officers and all directors of the entity; (ii) **for not-for-profit corporations**, all members, if any, which are legal entities (if there are no such members, write "no members which are legal entities"); (iii) **for trusts, estates or other similar entities**, the trustee, executor, administrator, or similarly situated party; (iv) **for general or limited partnerships, limited liability companies, limited liability partnerships or joint ventures**, each general partner, managing member, manager or any other person or legal entity that directly or indirectly controls the day-to-day management of the Applicant.

NOTE: Each legal entity listed below must submit an EDS on its own behalf.

Name	Title
------	-------

Please see Attachment A (eDocs#21977222)

2. Please provide the following information concerning each person or legal entity having a direct or indirect, current or prospective (i.e. within 6 months after City action) beneficial interest (including ownership) in excess of 7.5% of the Applicant. Examples of such an interest include shares in a corporation, partnership interest in a partnership or joint venture, interest of a member or manager in a

limited liability company, or interest of a beneficiary of a trust, estate or other similar entity. If none, state None.

NOTE: Each legal entity listed below may be required to submit an EDS on its own behalf.

Name	Business Address	Percentage Interest in the Applicant
------	------------------	--------------------------------------

Please see Attachment B.1 (eDocs#21977220) and Attachment B.2 (eDocs # 21971548)

SECTION III -- INCOME OR COMPENSATION TO, OR OWNERSHIP BY, CITY ELECTED OFFICIALS

Has the Disclosing Party provided any income or compensation to any City elected official during the 12-month period preceding the date of this EDS? Yes No

Does the Disclosing Party reasonably expect to provide any income or compensation to any City elected official during the 12-month period following the date of this EDS? Yes No

If yes to either of the above, please identify below the name(s) of such City elected official(s) and describe such income or compensation:

Please see Attachment C (eDocs#21971321)

Does any City elected official or, to the best of the Disclosing Party's knowledge after reasonable inquiry, any City elected official's spouse or domestic partner, have a financial interest (as defined in Chapter 2-156 of the Municipal Code of Chicago (MCC)) in the Disclosing Party?

Yes No

If "yes," please identify below the name(s) of such City elected official(s) and/or spouse(s)/domestic partner(s) and describe the financial interest(s).

Please see Attachment C (eDocs# 21971321)

SECTION IV -- DISCLOSURE OF SUBCONTRACTORS AND OTHER RETAINED PARTIES

The Disclosing Party must disclose the name and business address of each subcontractor, attorney, lobbyist (as defined in MCC Chapter 2-156), accountant, consultant and any other person or entity whom the Disclosing Party has retained or expects to retain in connection with the Matter, as well as the nature of the relationship, and the total amount of the fees paid or estimated to be paid. The Disclosing Party is not required to disclose employees who are paid solely through the Disclosing Party's regular payroll. If the Disclosing Party is uncertain whether a disclosure is required under this Section, the Disclosing Party must either ask the City whether disclosure is required or make the disclosure.

Name (indicate whether retained or anticipated to be retained)	Business Address	Relationship to Disclosing Party (subcontractor, attorney, lobbyist, etc.)	Fees (<u>indicate whether paid or estimated.</u>) NOTE: hourly rate or t.b.d. is not an acceptable response.
None			

(Add sheets if necessary)

[X] Check here if the Disclosing Party has not retained, nor expects to retain, any such persons or entities.

SECTION V -- CERTIFICATIONS

A. COURT-ORDERED CHILD SUPPORT COMPLIANCE

Under MCC Section 2-92-415, substantial owners of business entities that contract with the City must remain in compliance with their child support obligations throughout the contract's term.

Has any person who directly or indirectly owns 10% or more of the Disclosing Party been declared in arrearage on any child support obligations by any Illinois court of competent jurisdiction?

[] Yes [] No [X] No person directly or indirectly owns 10% or more of the Disclosing Party.

If Yes, has the person entered into a court-approved agreement for payment of all support owed and is the person in compliance with that agreement?

[] Yes [] No

B. FURTHER CERTIFICATIONS

1. [This paragraph 1 applies only if the Matter is a contract being handled by the City's Department of Procurement Services.] In the 5-year period preceding the date of this EDS, neither the Disclosing Party nor any Affiliated Entity [see definition in (5) below] has engaged, in connection with the performance of any public contract, the services of an integrity monitor, independent private sector inspector general, or integrity compliance consultant (i.e., an individual or entity with legal, auditing, investigative, or other similar skills, designated by a public agency to help the agency monitor the activity of specified agency vendors as well as help the vendors reform their business practices so they can be considered for agency contracts in the future, or continue with a contract in progress).

2. The Disclosing Party and its Affiliated Entities are not delinquent in the payment of any fine, fee, tax or other source of indebtedness owed to the City of Chicago, including, but not limited to, water and sewer charges, license fees, parking tickets, property taxes and sales taxes, nor is the Disclosing Party delinquent in the payment of any tax administered by the Illinois Department of Revenue.

3. The Disclosing Party and, if the Disclosing Party is a legal entity, all of those persons or entities identified in Section II(B)(1) of this EDS:
- a. are not presently debarred, suspended, proposed for debarment, declared ineligible or voluntarily excluded from any transactions by any federal, state or local unit of government;
 - b. have not, during the 5 years before the date of this EDS, been convicted of a criminal offense, adjudged guilty, or had a civil judgment rendered against them in connection with: obtaining, attempting to obtain, or performing a public (federal, state or local) transaction or contract under a public transaction; a violation of federal or state antitrust statutes; fraud; embezzlement; theft; forgery; bribery; falsification or destruction of records; making false statements; or receiving stolen property;
 - c. are not presently indicted for, or criminally or civilly charged by, a governmental entity (federal, state or local) with committing any of the offenses set forth in subparagraph (b) above;
 - d. have not, during the 5 years before the date of this EDS, had one or more public transactions (federal, state or local) terminated for cause or default; and
 - e. have not, during the 5 years before the date of this EDS, been convicted, adjudged guilty, or found liable in a civil proceeding, or in any criminal or civil action, including actions concerning environmental violations, instituted by the City or by the federal government, any state, or any other unit of local government.
4. The Disclosing Party understands and shall comply with the applicable requirements of MCC Chapters 2-56 (Inspector General) and 2-156 (Governmental Ethics).
5. Certifications (5), (6) and (7) concern:
- the Disclosing Party;
 - any Contractor (meaning any contractor or subcontractor used by the Disclosing Party in connection with the Matter, including but not limited to all persons or legal entities disclosed under Section IV, Disclosure of Subcontractors and Other Retained Parties);
 - any "Affiliated Entity" (meaning a person or entity that, directly or indirectly: controls the Disclosing Party, is controlled by the Disclosing Party, or is, with the Disclosing Party, under common control of another person or entity). Indicia of control include, without limitation: interlocking management or ownership; identity of interests among family members, shared facilities and equipment; common use of employees; or organization of a business entity following the ineligibility of a business entity to do business with federal or state or local government, including the City, using substantially the same management, ownership, or principals as the ineligible entity. With respect to Contractors, the term Affiliated Entity means a person or entity that directly or indirectly controls the Contractor, is controlled by it, or, with the Contractor, is under common control of another person or entity;
 - any responsible official of the Disclosing Party, any Contractor or any Affiliated Entity or any other official, agent or employee of the Disclosing Party, any Contractor or any Affiliated Entity, acting pursuant to the direction or authorization of a responsible official of the Disclosing Party, any Contractor or any Affiliated Entity (collectively "Agents").

Neither the Disclosing Party, nor any Contractor, nor any Affiliated Entity of either the Disclosing Party or any Contractor, nor any Agents have, during the 5 years before the date of this EDS, or, with respect to a Contractor, an Affiliated Entity, or an Affiliated Entity of a Contractor during the 5 years before the date of such Contractor's or Affiliated Entity's contract or engagement in connection with the Matter:

- a. bribed or attempted to bribe, or been convicted or adjudged guilty of bribery or attempting to bribe, a public officer or employee of the City, the State of Illinois, or any agency of the federal government or of any state or local government in the United States of America, in that officer's or employee's official capacity;
- b. agreed or colluded with other bidders or prospective bidders, or been a party to any such agreement, or been convicted or adjudged guilty of agreement or collusion among bidders or prospective bidders, in restraint of freedom of competition by agreement to bid a fixed price or otherwise; or
- c. made an admission of such conduct described in subparagraph (a) or (b) above that is a matter of record, but have not been prosecuted for such conduct; or
- d. violated the provisions referenced in MCC Subsection 2-92-320(a)(4)(Contracts Requiring a Base Wage); (a)(5)(Debarment Regulations); or (a)(6)(Minimum Wage Ordinance).

6. Neither the Disclosing Party, nor any Affiliated Entity or Contractor, or any of their employees, officials, agents or partners, is barred from contracting with any unit of state or local government as a result of engaging in or being convicted of (1) bid-rigging in violation of 720 ILCS 5/33E-3; (2) bid-rotating in violation of 720 ILCS 5/33E-4; or (3) any similar offense of any state or of the United States of America that contains the same elements as the offense of bid-rigging or bid-rotating.

7. Neither the Disclosing Party nor any Affiliated Entity is listed on a Sanctions List maintained by the United States Department of Commerce, State, or Treasury, or any successor federal agency.

8. [FOR APPLICANT ONLY] (i) Neither the Applicant nor any controlling person [see MCC Chapter 1-23, Article I for applicability and defined terms] of the Applicant is currently indicted or charged with, or has admitted guilt of, or has ever been convicted of, or placed under supervision for, any criminal offense involving actual, attempted, or conspiracy to commit bribery, theft, fraud, forgery, perjury, dishonesty or deceit against an officer or employee of the City or any sister agency; and (ii) the Applicant understands and acknowledges that compliance with Article I is a continuing requirement for doing business with the City. NOTE: If MCC Chapter 1-23, Article I applies to the Applicant, that Article's permanent compliance timeframe supersedes 5-year compliance timeframes in this Section V.

9. [FOR APPLICANT ONLY] The Applicant and its Affiliated Entities will not use, nor permit their subcontractors to use, any facility listed as having an active exclusion by the U.S. EPA on the federal System for Award Management (SAM).

10. [FOR APPLICANT ONLY] The Applicant will obtain from any contractors/subcontractors hired or to be hired in connection with the Matter certifications equal in form and substance to those in Certifications (2) and (9) above and will not, without the prior written consent of the City, use any such

contractor/subcontractor that does not provide such certifications or that the Applicant has reason to believe has not provided or cannot provide truthful certifications.

11. If the Disclosing Party is unable to certify to any of the above statements in this Part B (Further Certifications), the Disclosing Party must explain below:

Please see EDOCS # 21957258 (Attachment D) and supporting attachments: #2197617, 21971629, 21971631, 21971634.

In addition, at this time, Wells Fargo Clearing Services, LLC, DBA Wells Fargo Advisors ("WFA") is delinquent in the renewal of its business license. This delinquency is due to issues that WFA is experiencing with the update of the required personal information for the Owners. Wells Fargo Advisors is continuing to work towards the resolution of this issue and hopes to remedy shortly.

If the letters "NA," the word "None," or no response appears on the lines above, it will be conclusively presumed that the Disclosing Party certified to the above statements.

12. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all current employees of the Disclosing Party who were, at any time during the 12-month period preceding the date of this EDS, an employee, or elected or appointed official, of the City of Chicago (if none, indicate with N/A or none).

None

13. To the best of the Disclosing Party's knowledge after reasonable inquiry, the following is a complete list of all gifts that the Disclosing Party has given or caused to be given, at any time during the 12-month period preceding the execution date of this EDS, to an employee, or elected or appointed official, of the City of Chicago. For purposes of this statement, a gift does not include: (i) anything made generally available to City employees or to the general public, or (ii) food or drink provided in the course of official City business and having a retail value of less than \$25 per recipient, or (iii) a political contribution otherwise duly reported as required by law (if none, indicate with N/A or none). As to any gift listed below, please also list the name of the City recipient.

None

C. CERTIFICATION OF STATUS AS FINANCIAL INSTITUTION

1. The Disclosing Party certifies that the Disclosing Party (check one)

is is not

a "financial institution" as defined in MCC Section 2-32-455(b).

2. If the Disclosing Party IS a financial institution, then the Disclosing Party pledges:

"We are not and will not become a predatory lender as defined in MCC Chapter 2-32. We further

pledge that none of our affiliates is, and none of them will become, a predatory lender as defined in MCC Chapter 2-32. We understand that becoming a predatory lender or becoming an affiliate of a predatory lender may result in the loss of the privilege of doing business with the City."

If the Disclosing Party is unable to make this pledge because it or any of its affiliates (as defined in MCC Section 2-32-455(b)) is a predatory lender within the meaning of MCC Chapter 2-32, explain here (attach additional pages if necessary):

If the letters "NA," the word "None," or no response appears on the lines above, it will be conclusively presumed that the Disclosing Party certified to the above statements.

D. CERTIFICATION REGARDING FINANCIAL INTEREST IN CITY BUSINESS

Any words or terms defined in MCC Chapter 2-156 have the same meanings if used in this Part D.

1. In accordance with MCC Section 2-156-110: To the best of the Disclosing Party's knowledge after reasonable inquiry, does any official or employee of the City have a financial interest in his or her own name or in the name of any other person or entity in the Matter?

Yes No

NOTE: If you checked "Yes" to Item D(1), proceed to Items D(2) and D(3). If you checked "No" to Item D(1), skip Items D(2) and D(3) and proceed to Part E.

2. Unless sold pursuant to a process of competitive bidding, or otherwise permitted, no City elected official or employee shall have a financial interest in his or her own name or in the name of any other person or entity in the purchase of any property that (i) belongs to the City, or (ii) is sold for taxes or assessments, or (iii) is sold by virtue of legal process at the suit of the City (collectively, "City Property Sale"). Compensation for property taken pursuant to the City's eminent domain power does not constitute a financial interest within the meaning of this Part D.

Does the Matter involve a City Property Sale?

Yes No

3. If you checked "Yes" to Item D(1), provide the names and business addresses of the City officials or employees having such financial interest and identify the nature of the financial interest:

Name	Business Address	Nature of Financial Interest
_____	_____	_____
_____	_____	_____
_____	_____	_____

4. The Disclosing Party further certifies that no prohibited financial interest in the Matter will be acquired by any City official or employee.

E. CERTIFICATION REGARDING SLAVERY ERA BUSINESS

Please check either (1) or (2) below. If the Disclosing Party checks (2), the Disclosing Party must disclose below or in an attachment to this EDS all information required by (2). Failure to comply with these disclosure requirements may make any contract entered into with the City in connection with the Matter voidable by the City.

 1. The Disclosing Party verifies that the Disclosing Party has searched any and all records of the Disclosing Party and any and all predecessor entities regarding records of investments or profits from slavery or slaveholder insurance policies during the slavery era (including insurance policies issued to slaveholders that provided coverage for damage to or injury or death of their slaves), and the Disclosing Party has found no such records.

 X 2. The Disclosing Party verifies that, as a result of conducting the search in step (1) above, the Disclosing Party has found records of investments or profits from slavery or slaveholder insurance policies. The Disclosing Party verifies that the following constitutes full disclosure of all such records, including the names of any and all slaves or slaveholders described in those records:

Please see Attachment E (eDocs# 21971380)

SECTION VI -- CERTIFICATIONS FOR FEDERALLY FUNDED MATTERS

NOTE: If the Matter is federally funded, complete this Section VI. **If the Matter is not federally funded**, proceed to Section VII. For purposes of this Section VI, tax credits allocated by the City and proceeds of debt obligations of the City are not federal funding.

A. CERTIFICATION REGARDING LOBBYING – N/A

1. List below the names of all persons or entities registered under the federal Lobbying Disclosure Act of 1995, as amended, who have made lobbying contacts on behalf of the Disclosing Party with respect to the Matter: (Add sheets if necessary):

(If no explanation appears or begins on the lines above, or if the letters "NA" or if the word "None" appear, it will be conclusively presumed that the Disclosing Party means that NO persons or entities registered under the Lobbying Disclosure Act of 1995, as amended, have made lobbying contacts on behalf of the Disclosing Party with respect to the Matter.)

2. The Disclosing Party has not spent and will not expend any federally appropriated funds to pay any person or entity listed in paragraph A(1) above for his or her lobbying activities or to pay any person or entity to influence or attempt to influence an officer or employee of any agency, as defined by applicable federal law, a member of Congress, an officer or employee of Congress, or an employee

of a member of Congress, in connection with the award of any federally funded contract, making any federally funded grant or loan, entering into any cooperative agreement, or to extend, continue, renew, amend, or modify any federally funded contract, grant, loan, or cooperative agreement.

3. The Disclosing Party will submit an updated certification at the end of each calendar quarter in which there occurs any event that materially affects the accuracy of the statements and information set forth in paragraphs A(1) and A(2) above.

4. The Disclosing Party certifies that either: (i) it is not an organization described in section 501(c)(4) of the Internal Revenue Code of 1986; or (ii) it is an organization described in section 501(c)(4) of the Internal Revenue Code of 1986 but has not engaged and will not engage in "Lobbying Activities," as that term is defined in the Lobbying Disclosure Act of 1995, as amended.

5. If the Disclosing Party is the Applicant, the Disclosing Party must obtain certifications equal in form and substance to paragraphs A(1) through A(4) above from all subcontractors before it awards any subcontract and the Disclosing Party must maintain all such subcontractors' certifications for the duration of the Matter and must make such certifications promptly available to the City upon request.

B. CERTIFICATION REGARDING EQUAL EMPLOYMENT OPPORTUNITY – N/A

If the Matter is federally funded, federal regulations require the Applicant and all proposed subcontractors to submit the following information with their bids or in writing at the outset of negotiations.

Is the Disclosing Party the Applicant?

Yes

No

If Yes, answer the three questions below:

1. Have you developed and do you have on file affirmative action programs pursuant to applicable federal regulations? (See 41 CFR Part 60-2.)

Yes

No

2. Have you filed with the Joint Reporting Committee, the Director of the Office of Federal Contract Compliance Programs, or the Equal Employment Opportunity Commission all reports due under the applicable filing requirements?

Yes

No

Reports not required

3. Have you participated in any previous contracts or subcontracts subject to the equal opportunity clause?

Yes

No

If you checked No to question (1) or (2) above, please provide an explanation:

SECTION VII -- FURTHER ACKNOWLEDGMENTS AND CERTIFICATION

The Disclosing Party understands and agrees that:

A. The certifications, disclosures, and acknowledgments contained in this EDS will become part of any contract or other agreement between the Applicant and the City in connection with the Matter, whether procurement, City assistance, or other City action, and are material inducements to the City's execution of any contract or taking other action with respect to the Matter. The Disclosing Party understands that it must comply with all statutes, ordinances, and regulations on which this EDS is based.

B. The City's Governmental Ethics Ordinance, MCC Chapter 2-156, imposes certain duties and obligations on persons or entities seeking City contracts, work, business, or transactions. The full text of this ordinance and a training program is available on line at www.cityofchicago.org/Ethics, and may also be obtained from the City's Board of Ethics, 740 N. Sedgwick St., Suite 500, Chicago, IL 60610, (312) 744-9660. The Disclosing Party must comply fully with this ordinance.

C. If the City determines that any information provided in this EDS is false, incomplete or inaccurate, any contract or other agreement in connection with which it is submitted may be rescinded or be void or voidable, and the City may pursue any remedies under the contract or agreement (if not rescinded or void), at law, or in equity, including terminating the Disclosing Party's participation in the Matter and/or declining to allow the Disclosing Party to participate in other City transactions. Remedies at law for a false statement of material fact may include incarceration and an award to the City of treble damages.

D. It is the City's policy to make this document available to the public on its Internet site and/or upon request. Some or all of the information provided in, and appended to, this EDS may be made publicly available on the Internet, in response to a Freedom of Information Act request, or otherwise. By completing and signing this EDS, the Disclosing Party waives and releases any possible rights or claims which it may have against the City in connection with the public release of information contained in this EDS and also authorizes the City to verify the accuracy of any information submitted in this EDS.

E. The information provided in this EDS must be kept current. In the event of changes, the Disclosing Party must supplement this EDS up to the time the City takes action on the Matter. If the Matter is a contract being handled by the City's Department of Procurement Services, the Disclosing Party must update this EDS as the contract requires. **NOTE:** With respect to Matters subject to MCC Chapter 1-23, Article I (imposing **PERMANENT INELIGIBILITY** for certain specified offenses), the information provided herein regarding eligibility must be kept current for a longer period, as required by MCC Chapter 1-23 and Section 2-154-020.

CERTIFICATION

Under penalty of perjury, the person signing below: (1) warrants that he/she is authorized to execute this EDS, and all applicable Appendices, on behalf of the Disclosing Party, and (2) warrants that all certifications and statements contained in this EDS, and all applicable Appendices, are true, accurate and complete as of the date furnished to the City.

**CITY OF CHICAGO
ECONOMIC DISCLOSURE STATEMENT AND AFFIDAVIT
APPENDIX A**

**FAMILIAL RELATIONSHIPS WITH ELECTED CITY OFFICIALS
AND DEPARTMENT HEADS**

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5%. It is not to be completed by any legal entity which has only an indirect ownership interest in the Applicant.

Under MCC Section 2-154-015, the Disclosing Party must disclose whether such Disclosing Party or any Applicable Party or any Spouse or Domestic Partner thereof currently has a familial relationship with any elected city official or department head. A familial relationship exists if, as of the date this EDS is signed, the Disclosing Party or any Applicable Party or any Spouse or Domestic Partner thereof is related to the mayor, any alderman, the city clerk, the city treasurer or any city department head as spouse or domestic partner or as any of the following, whether by blood or adoption: parent, child, brother or sister, aunt or uncle, niece or nephew, grandparent, grandchild, father-in-law, mother-in-law, son-in-law, daughter-in-law, stepfather or stepmother, stepson or stepdaughter, stepbrother or stepsister or half-brother or half-sister.

Applicable Party means (1) all executive officers of the Disclosing Party listed in Section II.B.1.a., if the Disclosing Party is a corporation; all partners of the Disclosing Party, if the Disclosing Party is a general partnership; all general partners and limited partners of the Disclosing Party, if the Disclosing Party is a limited partnership; all managers, managing members and members of the Disclosing Party, if the Disclosing Party is a limited liability company; (2) all principal officers of the Disclosing Party; and (3) any person having more than a 7.5% ownership interest in the Disclosing Party. Principal officers means the president, chief operating officer, executive director, chief financial officer, treasurer or secretary of a legal entity or any person exercising similar authority.

Does the Disclosing Party or any Applicable Party or any Spouse or Domestic Partner thereof currently have a familial relationship with an elected city official or department head?

Yes

No

If yes, please identify below (1) the name and title of such person, (2) the name of the legal entity to which such person is connected; (3) the name and title of the elected city official or department head to whom such person has a familial relationship, and (4) the precise nature of such familial relationship.

APPENDIX B**

BUILDING CODE SCOFFLAW/PROBLEM LANDLORD CERTIFICATION

This Appendix is to be completed only by (a) the Applicant, and (b) any legal entity which has a direct ownership interest in the Applicant exceeding 7.5% (an "Owner"). It is not to be completed by any legal entity which has only an indirect ownership interest in the Applicant.

1. Pursuant to MCC Section 2-154-010, is the Applicant or any Owner identified as a building code scofflaw or problem landlord pursuant to MCC Section 2-92-416?

Yes No

2. If the Applicant is a legal entity publicly traded on any exchange, is any officer or director of the Applicant identified as a building code scofflaw or problem landlord pursuant to MCC Section 2-92-416?

Yes No The Applicant is not publicly traded on any exchange.

3. If yes to (1) or (2) above, please identify below the name of each person or legal entity identified as a building code scofflaw or problem landlord and the address of each building or buildings to which the pertinent code violations apply.

**CITY OF CHICAGO
ECONOMIC DISCLOSURE STATEMENT AND AFFIDAVIT
APPENDIX C**

PROHIBITION ON WAGE & SALARY HISTORY SCREENING - CERTIFICATION

This Appendix is to be completed only by an Applicant that is completing this EDS as a “contractor” as defined in MCC Section 2-92-385. That section, which should be consulted (www.amlegal.com), generally covers a party to any agreement pursuant to which they: (i) receive City of Chicago funds in consideration for services, work or goods provided (including for legal or other professional services), or (ii) pay the City money for a license, grant or concession allowing them to conduct a business on City premises.

On behalf of an Applicant that is a contractor pursuant to MCC Section 2-92-385, I hereby certify that the Applicant is in compliance with MCC Section 2-92-385(b)(1) and (2), which prohibit: (i) screening job applicants based on their wage or salary history, or (ii) seeking job applicants’ wage or salary history from current or former employers. I also certify that the Applicant has adopted a policy that includes those prohibitions.

Yes

No

N/A – I am not an Applicant that is a “contractor” as defined in MCC Section 2-92-385.

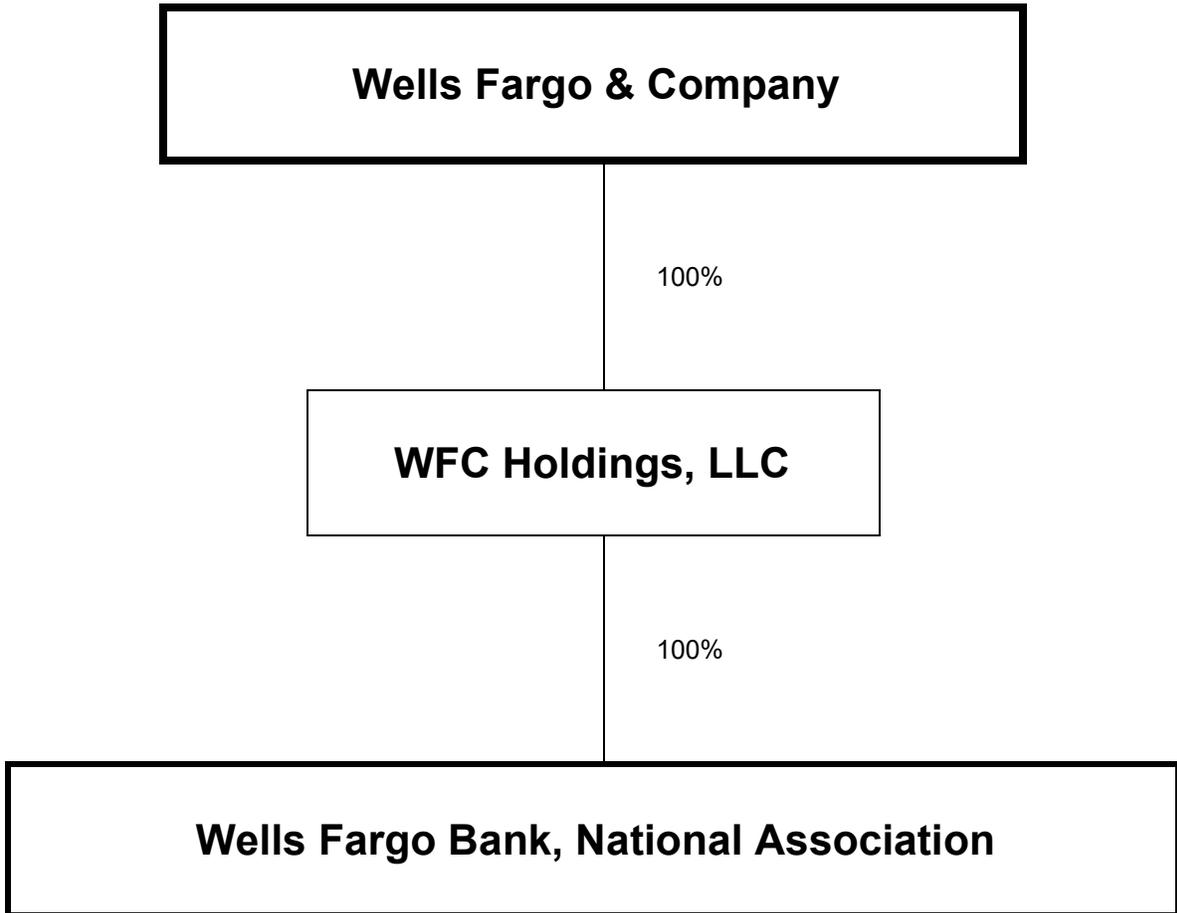

This certification shall serve as the affidavit required by MCC Section 2-92-385(c)(1).

If you checked “no” to the above, please explain.

WFC Holdings, LLC a legal entity with a direct or indirect right of control of Wells Fargo Bank, N.A.
(the “Applicant”).

**Anti-Predatory Lending Pledge*
for Municipal Depositories**

We pledge that we are not and will not become a predatory lender as defined in Chapter 2-32 of the Municipal Code of Chicago. We further pledge that none of our affiliates is, and none of them will become, a predatory lender as defined in Chapter 2-32 of the Municipal Code of Chicago. We understand that becoming a predatory lender or becoming an affiliate of a predatory lender may result in the loss of our designation as a municipal depository.

*The definitions of certain terms set forth in Chapter 2-32 of the Municipal Code of Chicago and used in the Anti-Predatory Lending Pledge are reproduced on the attached pages.

Loan Policy Pledge and Consumer Protection Statement for Municipal Depositories

We pledge not to arbitrarily reject mortgage loans for residential properties within a specific geographic area in Chicago because of the location and/or age of the property, or in the case of proposed borrower to arbitrarily vary the terms of those loans or the application procedures for those loans on the basis of race, color, religion, national origin, age, sex, gender identity, marital status, ancestry, sexual orientation, parental status, source of income, disability or military status. In addition, we pledge to make loans available to low- and moderate-income residential property in the neighborhoods of the City of Chicago within the limits of our legal restriction and prudent financial practices.

We understand that arbitrarily rejecting or varying the terms and/or application procedures of mortgage loans on the basis of the factors listed above may result in the loss of our designation as a municipal depository.

We certify on information and belief that we are in substantial compliance with consumer financial protection laws, subject to any previous disclosures made by us or by regulatory agencies.

**Compliance with Vacant Buildings Code Pledge
For Municipal Depositories**

We are in compliance with the reporting requirements in regard to vacant property as defined in Section 13-12-125 of the Municipal Code of Chicago. We further pledge we will maintain vacant properties in compliance with the Chicago Building Code as defined in Section 13-12-135 of the Municipal Code of Chicago. We understand that failing to adhere to these requirements or becoming an affiliate of an offender of these requirements may result in the loss of our designation as a municipal depository.

**AFFIDAVIT OF COMMITMENT TO COMMUNITY REINVESTMENT,
RESPONSIBILITY AND TRANSPARENCY
CITY OF CHICAGO OFFICE OF THE COMPTROLLER**

I, Mark Lester a duly authorized representative of Wells Fargo Bank, N.A. represent and say as follows:

That for the purpose of becoming an eligible depository for active deposits of the City of Chicago, the undersigned Affiant states that it will use reasonable efforts to provide lending, financing, and banking opportunities as a commitment of community reinvestment to Chicago's low and moderate income (LMI) communities; Affiant states that such reasonable efforts shall include, but are not limited to:

- A. Assignment of identifiable personnel to answer and respond to questions, concerns and inquiries by the citizens of Chicago, City Treasurer, City Comptroller, and the City Council regarding financial services, investment and lending products, services and related issues, including the Community Reinvestment Act (CRA) of 1977;
- B. Cooperate with and support non-profit neighborhood development/redevelopment organizations in the implementation of "neighborhood economic development" strategies that focus on revitalization of communities that are more locally focused where an institution has a branch or market presence;
- C. Commit to affirmatively market and make available banking services throughout Chicago's low and moderate income communities, by not meeting this commitment only through the installation of ATM distribution centers, but also by opening and/or maintaining branch locations within those communities;
- D. Prepare an annual report of CRA activities, presented to the Comptroller, the Treasurer, and the City Council, that is made publicly available, demonstrating investment in all Chicago Communities, as well as reinvestment in LMI communities of Chicago, by community area that includes the number of loans and amount of loans in the following (6) categories:
 - 1. Home Purchase within LMI communities;
 - 2. Refinancing within LMI communities;
 - 3. Home Improvement;
 - 4. Small Business Loans (to companies with revenues under \$1 Million);
 - 5. Community Development Loans including multi-family lending; and
 - 6. Community Development Investments to eligible Community Development Financial Institutions (CDFI) and other community intermediaries to further the goals of an institution to meet its obligations to the Community Reinvestment Act of 1977 and this Affidavit.

Such a Municipal Depository annual CRA report will include, by community area, the number of mortgage loans originated and other strategies to minimize the impact of foreclosure and neighborhood instability.

- E. An institution acknowledges that failure to comply with this Affidavit may result in discontinued status as a municipal depository.

Government & Institutional Banking

10 South Wacker Drive, 15th Floor
Chicago, Illinois 60606

November 18, 2021

Reshma Soni
City Comptroller
Department of Finance
121 N. LaSalle, 7th Floor
Chicago, IL 60602

Dear Ms. Soni,

On behalf of Wells Fargo Bank, N.A., we are pleased to provide you with the accompanying response to the Request for Proposal (“RFP”) for Designation as a 2022 Municipal Depository for the City of Chicago and the Chicago Board of Education. We look forward to a chance to demonstrate our commitment to the City of Chicago as a provider of both community support and financial tools. We would also like to highlight our dedication to community and programs which we have provided in the City of Chicago in 2020 and 2021:

- Wells Fargo recently invested approximately \$8.5 million in grants from its Open for Business Fund to help the Chicago small business community pivot from surviving to thriving. The funding will help increase access to capital with low rate loans for women and diverse entrepreneurs, and provide access to experts and other resources that can help grow their business.
 - Five locally-based Community Development Financial Institutions (CDFIs) and nonprofits that have been selected by the Open for Business Fund are the following:
 - Allies for Community Business
 - Chicago Community Loan Fund
 - Community Investment Corporation
 - Greater Chatham Initiative
 - Greenwood Archer Capital
- In 2020, Wells Fargo provided more than \$181,000 in housing counseling grant support to nonprofits in the Chicagoland area who have served 1,740 homeowners and renters as a result.
- A \$400,000 grant to Lawyers Committee for Better Housing from the Wells Fargo Foundation, which will enable the local organization to provide free or low-cost legal assistance for renters and representation for people in Chicago disproportionately affected by COVID-19 and at-risk of eviction.
- The U.S. Conference of Mayors and Wells Fargo awarded a \$100,000 2020 CommunityWINS® grant to Neighborhood Housing Services of Chicago in support of the Preservation of Affordable Multi-Unit Properties Project. The program seeks to not only support existing landlords with 2 – 4 unit rental properties in keeping and fixing their affordable units, but also support and grow a next generation of small landlords that can carry the community-oriented tradition of homeownership.
- Wells Fargo is proud to be one of the largest providers of home purchase loans to Black and Hispanic borrowers in the Chicago area, according to HMDA data. In addition, over the past two years, Wells Fargo has provided \$154 million in equity and construction financing for approximately 850 affordable housing units in Chicago’s Campbell Terrace Senior Living, Northpoint Apartments and Circle Park developments.

Note on CRA Rating: In May 2020, Wells Fargo received an “Outstanding” rating from the Office of the Comptroller of the Currency – the highest possible rating. Throughout our history – before, during and since this review period – Wells Fargo has worked diligently to demonstrate a strong commitment to lending to, investing in and providing service to low- and moderate-income communities across the country. We are proud that the CRA Performance Evaluation notes that Wells Fargo:

- Is a “leader in making community development (CD) loans.”
- Makes “significant use of innovative and/or flexible loan products” to meet credit needs.
- Provides retail banking options that are accessible in a majority of the areas surveyed.
- Serves its customers through full-service ATMs, phone banking, online and mobile banking and mobile payments

We look forward to the opportunity to provide commercial banking services to the City of Chicago and to the Chicago Board of education. We believe that our commitment to providing financial and community support to the City will yield a partnership that will help the City achieve its financial goals. Should you have any questions regarding our proposal or require further information, please do not hesitate to contact us. We look forward to continuing this conversation.

Sincerely,

A handwritten signature in black ink, appearing to read 'Mark Lester', with a stylized flourish at the end.

**FDIC Deposit Insurance Coverage Limits**

Currently the FDIC insures the deposits of governmental accounts on a per Official Custodian basis as follows:

The aggregate balances in demand deposit accounts are insured up to \$250,000 per Official Custodian; and

The aggregate balances in time and savings accounts are insured up to \$250,000 per Official Custodian.

An Official Custodian is an officer, employee, or agent of a public unit having official custody of public funds and lawfully depositing the funds in an insured institution. In order to qualify as an Official Custodian, a person must have plenary authority – including control – over the funds. Control of public funds includes possession as well as the authority to establish accounts in insured depository institutions and to make deposits, withdrawals and disbursements.

Commercial checking accounts

Wells Fargo Commercial Advantage Checking

Manage your complex depository needs while enjoying all the benefits of an earnings credit allowance and earning interest on unused balances.

With a Wells Fargo Commercial Advantage Checking account, you can manage your complex depository needs with ease and convenience. The service offers a single account for deposits and disbursements, into which you can deposit your checks through Wells Fargo cash vaults, branches, *Envelope-Free*SM ATMs, or any of our electronic deposit services.

Wells Fargo Commercial Advantage Checking offers:

Convenient online item inquiry and image requests. Resolve your questions regarding items posting to your account or view images of checks, deposit tickets, and deposited checks through the Stops-Images-Search service available on our *Commercial Electronic Office*[®] (CEO[®]) portal. Stops-Images-Search enables you to research up to seven years of paid check transactions. All other transactions, including deposit and check deposited images, are available for up to 180 days. Image requests can be fulfilled via online delivery, fax, or U.S. mail.

Stop-payment orders. Place stop-payment instructions easily through our Stops-Images-Search service. In addition, you can renew stop-payments automatically for up to six years (in 12-month increments) with the Auto Stop Renewal service. This unique service also allows stops to be renewed based on predetermined dollar limits.

Risk mitigation. Take advantage of our payment authorization services to help prevent unauthorized transactions from posting to your account. You can restrict certain types of transactions from posting or place dollar limits on paid checks. By combining a Wells Fargo Commercial Advantage Checking account with our Positive Pay service, you can help protect your organization from over-the-counter cashing of fraudulent checks. Check-issue information is available at the teller line of every Wells Fargo branch nationwide.

Customized cash management services. Wells Fargo is committed to maximizing your available cash through a variety of cash management services tailored to your specific business requirements. The services provide tools to improve cash flow and maximize your return. Detailed reporting provides accurate and up-to-date information to help you make informed decisions.

continued

How Wells Fargo Commercial Advantage Checking works

Commercial Advantage Checking is a unique, interest-bearing account that uses an earnings credit rate (ECR) to offset fees for services used, and then pays interest on any unused balances.

- At the end of each month, the average positive collected balance is calculated.

- Balances not needed to offset service charges are paid a competitive interest rate.
- If there are insufficient balances to offset all service charges, the remaining fees are charged to the account.

Here's an example:

Average monthly balance summary	Excess position	Shortfall position
Average ledger balance	\$250,000.00	\$250,000.00
Less average float	-	-
Average collected balances	\$250,000.00	\$250,000.00
Investable balance (average positive collected balance)	\$250,000.00	\$250,000.00
Earnings credit allowance @ 40bps ECR	\$84.93	\$84.93
Fees	\$50.00	\$100.00
Fees charged to account	\$0.00	\$15.07
Balance equivalent (minimum balance needed to offset all fees)	\$147,177.43	\$294,354.86
Excess balance available for interest (Investable balance less balance equivalent)	\$102,822.57	\$0.00
Interest paid @ 27bps	\$23.58	\$0.00

Statement of Community Involvement – 2020-2021 Overview of Recent Activities

- Wells Fargo recently invested approximately \$8.5 million in grants from its Open for Business Fund to help the Chicago small business community pivot from surviving to thriving. The funding will help increase access to capital with low rate loans for women and diverse entrepreneurs, and provide access to experts and other resources that can help grow their business.
 - Five locally-based Community Development Financial Institutions (CDFIs) and nonprofits that have been selected by the Open for Business Fund are the following:
 - Allies for Community Business
 - Chicago Community Loan Fund
 - Community Investment Corporation
 - Greater Chatham Initiative
 - Greenwood Archer Capital
- In 2020, Wells Fargo provided more than \$181,000 in housing counseling grant support to nonprofits in the Chicagoland area who have served 1,740 homeowners and renters as a result.
- A \$400,000 grant to Lawyers Committee for Better Housing from the Wells Fargo Foundation, which will enable the local organization to provide free or low-cost legal assistance for renters and representation for people in Chicago disproportionately affected by COVID-19 and at-risk of eviction.
- The U.S. Conference of Mayors and Wells Fargo awarded a \$100,000 2020 CommunityWINS® grant to Neighborhood Housing Services of Chicago in support of the Preservation of Affordable Multi-Unit Properties Project. The program seeks to not only support existing landlords with 2 – 4 unit rental properties in keeping and fixing their affordable units, but also support and grow a next generation of small landlords that can carry the community-oriented tradition of homeownership.
- Wells Fargo is proud to be one of the largest providers of home purchase loans to Black and Hispanic borrowers in the Chicago area, according to HMDA data. In addition, over the past two years, Wells Fargo has provided \$154 million in equity and construction financing for approximately 850 affordable housing units in Chicago's Campbell Terrace Senior Living, Northpoint Apartments and Circle Park developments.

Customer Name

Re: Collateralization of Public Funds Deposits

Dear Wells Fargo Customer,

On a daily basis, our Public Funds Collateral Unit will monitor your collected balances in deposit accounts maintained with our commercial and business banking offices, as well as cash and deposit balances held in certain trust agency and asset management custody accounts. We will pledge collateral to protect balances above FDIC coverage and Bank of New York Mellon will provide you with a Price Report showing the securities pledged monthly. Currently FDIC insures the deposits of governmental accounts on a per Official Custodian basis as follows: the aggregate balances in demand deposits accounts are insured up to **\$250,000** per Official Custodian and the aggregate balances in time and savings accounts are insured up to **\$250,000** per Official Custodian. Wells Fargo collateralizes uninsured balances by pledging securities from its investment portfolio. This portfolio consists primarily of investment grade securities. The market value of these securities is updated daily by an established third-party service that provides valuation services to many market participants.

Enclosed is the Depository Pledge Agreement (collateral agreement) covering deposits held at Wells Fargo Bank, N.A. for **Customer Name**. In accordance with the applicable federal law (12 U.S.C. 1823), this collateral agreement must be approved by the bank's board of directors or loan committee; the approval must be reflected in the applicable meeting minutes; and the agreement must be an official record of the bank, continuously from the time of its execution. **Please sign, scan and email to publicfundscollateral@wellsfargo.com or mail to us at the following address:**

**Wells Fargo Bank
Public Funds Collateral Unit
333 Market St 15th Floor
San Francisco, CA 94105
MAC A0109-150**

The Depository Pledge Agreement will be forwarded to the custodian, Bank of New York Mellon for signature. The fully executed agreement will be submitted to the Wells Fargo Bank N.A.'s Board of Directors/Loan Committee for approval. A fully signed executed agreement and corporate resolution will be mailed to you upon completion.

- **All Blue & Shaded areas on document MUST be completed for processing**
- **Please verify accuracy of all prefilled data in Blue**

Your deposit balance above FDIC will not be collateralized until we are in receipt of the enclosed signed Depository Pledge Agreement (collateral agreement).

We hope this information regarding the documents required for collateralization is clear. If you have additional questions, please contact 877-479-6603. We look forward to serving you!

Sincerely,

Sheila Lynch
GIB Public Funds Collateral Unit

Wells Fargo Bank, N.A.

Together we'll go far

DEPOSITORY PLEDGE AGREEMENT

TAX ID

Customer Name ("Depositor") has selected **WELLS FARGO BANK, NATIONAL ASSOCIATION** ("Bank") as a depository for certain of its funds and Bank has agreed to act as the depository for those funds in accordance with applicable laws, which require that Bank secure the deposited funds, to the extent not insured by the Federal Deposit Insurance Corporation ("FDIC"), by pledging securities of any type permitted by applicable law; provided that such securities are acceptable to Custodian ("Eligible Securities"). **THE BANK OF NEW YORK MELLON** ("Custodian") has agreed to hold the pledged securities in safekeeping pursuant to the terms of this Agreement.

NOW, THEREFORE, in consideration of the mutual promises and covenants in this Agreement, Depositor, Bank and Custodian agree as follows:

1. Grant of Security Interest; Instructions Regarding Collateral. (a) Bank hereby grants to Depositor a security interest in all Eligible Securities transferred to a separate custody account (the "Collateral Account") established pursuant to this agreement (the "Collateral"). Custodian agrees to serve as collateral agent for Depositor, pursuant to the terms of this Agreement. For the avoidance of doubt, Custodian acknowledges and agrees that it does not have and will not acquire or assert at any time in the future, and hereby expressly waives, any lien upon, security interest in, setoff right or other right to charge the Collateral held in the Collateral Account for any obligation owed to Custodian by Bank or Depositor. Until Depositor has the right to compel sale of the Collateral under Section 7 hereof, Custodian may act in accordance with the instructions of Bank, including, without limitation, the right of Bank to unilaterally substitute Eligible Securities for the Collateral in accordance with Section 3 hereof. Addendum "A" contains the names and specimen signatures of individuals authorized to act on behalf of Depositor. Bank shall provide the names and specimen signatures of individuals authorized to act on behalf of Bank to Custodian by means of a method mutually agreed upon by Bank and Custodian, which may include a master list applicable to one or more Depository Pledge Agreements. Either Depositor or Bank may add or remove authorized representatives without the consent of the other at any time by providing Custodian with a replacement addendum, duly executed by an authorized individual. In no event shall Custodian be responsible for determining whether the pledged securities are "Eligible Securities".

(b) Each of Depositor and Bank hereby appoints Custodian as custodian of all Collateral at any time delivered to Custodian pursuant to this Agreement and to perform its duties as hereinafter set forth and authorizes Custodian to hold Collateral in the Collateral Account in registered form in its name or the name of its nominees. Custodian hereby accepts such appointment and agrees to establish and maintain the Collateral Account and appropriate records identifying the Collateral in the Collateral Account as pledged by Bank to Depositor.

(c) Bank, Depositor and Custodian agree that all Collateral delivered to or received by Custodian for deposit in the Collateral Account may be in the form of credits to the accounts of Custodian at a Securities Depository or by delivery to Custodian of physical certificates in a form suitable for transfer to Custodian or with an assignment in blank. Bank and Depositor hereby authorize Custodian to utilize such Securities Depositories and to hold such physical securities or any combination thereof in connection with its performance hereunder. Collateral credited to the Collateral Account and deposited in the Securities Depositories will be held, by book-entry notation, in accounts that include only assets held by Custodian or its agent(s) for third parties, including but not limited to accounts in which assets are held in a fiduciary, agency or representative capacity. Physical Collateral that is not held through Securities Depositories will be held in Custodian's vault and physically segregated from securities and other non-cash property belonging to Custodian. As used herein, the term "Securities Depository" or "Securities Depositories" shall mean the Treasury/Reserve Automated Debt Entry System maintained at The Federal Reserve Bank of New York for receiving and delivering securities, The Depository Trust Company and any other clearing corporation within the meaning of Section 8-102 of the Uniform Commercial Code, as in effect in the State of New York from time to time.

2. Amount of Collateral. The aggregate market value of Collateral held by Custodian at all times during the term of this Agreement must be in an amount not less than (a) the amount of the collected funds on deposit, increased by (b) the amount of accrued but uncredited interest, (c) reduced by that portion of the funds insured by the FDIC, adjusted pursuant to the margin requirement or applicable discount rate specified above the signature blocks at the end of this Agreement. Such amount is hereinafter called the "Required Collateral Value". In no event shall Custodian be responsible for determining whether the Collateral Account contains the Required Collateral Value or that the property posted to the Collateral Account is eligible to serve as collateral pursuant to applicable law. If no margin requirement or discount rate is specified in the designated location at the end of this Agreement, the applicable requirement/rate will be deemed to be 100%.

3. Substitutions and Withdrawals of Collateral. If the aggregate market value of Collateral held by Custodian at any time exceeds the Required Collateral Value, Bank may unilaterally withdraw any excess Collateral by providing Custodian with a withdrawal notice signed by an authorized representative of Bank, provided that after the withdrawal of any such excess Collateral, the remaining Collateral equals or exceeds the Required Collateral Value. Additionally, Bank

may unilaterally substitute Eligible Securities for any of the Collateral held by Custodian at any time by providing Custodian with a substitution notice signed by an authorized representative of Bank, provided that the Bank determines that the market value of the Collateral following such substitution would equal or exceed the Required Collateral Value. If Bank elects to require Depositor's written consent on a notice in connection with any withdrawal or substitution which complies with this Section 3, Depositor agrees to provide it promptly upon Bank's request. Custodian shall be entitled to rely on, and Bank and Depositor agree to hold Custodian harmless from, any actions taken pursuant to, and consistent with, the instructions given in a withdrawal or substitution notice under this Section 3, whether unilateral or not.

4. Bank's Obligations. Bank shall perform all of the duties and obligations required of a depository under applicable law with respect to collateralization of the funds of Depositor on deposit with Bank. At the expiration of the term of this Agreement, Bank shall turn over to any successor depository designated by Depositor all funds held by Bank as depository. Bank will furnish to Depositor a monthly statement listing a description of the Collateral. The statement will specify the par value, market value, and maturity date of each component of the Collateral. Upon request, Bank shall provide to Depositor a copy of Bank's most recent publicly available quarterly or annual financial statement.

5. Custodian's Obligations. (a) Custodian shall perform the duties and obligations required of Custodian hereunder. Upon transfer by Custodian of Eligible Securities to the Collateral Account, including Eligible Securities substituted for other Collateral, Custodian shall promptly identify such Eligible Securities on its books and records as being Collateral held pursuant to this Agreement. Custodian shall provide Depositor each month with a statement identifying all property held in the Collateral Account as of the date of such statement. Custodian shall also provide to Depositor and Bank upon request, a written confirmation on any business day on which securities are transferred to and from the Collateral Account. Such confirmation shall identify the specific securities which are the subject of the confirmation. Depositor agrees that it shall promptly review all such confirmation statements and shall promptly advise Custodian in writing of any error, omission or inaccuracy in such statements. In the event that Custodian receives such a notice claiming that an error, omission or inaccuracy has occurred with respect to the Collateral Account, Custodian shall promptly undertake to investigate such claim and correct any errors, failures or omissions which such investigation confirms have occurred. Any such corrections shall be reflected on subsequent confirmation statements.

(b) Depositor agrees that, with respect to all securities held in the Collateral Account, Custodian by itself, or through the use of the appropriate Securities Depository, shall, unless otherwise instructed to the contrary by Bank or as provided in Section 7 hereof: (i) collect all payments reflecting interest and principal on the securities in the Collateral Account; (ii) forward to Bank copies of all information or documents that it may receive from an issuer of securities which, in the opinion of Custodian, is intended for the beneficial owner of the securities including, without limitation all proxies and other authorizations properly executed and all proxy statements, notices and reports; (iii) execute, as Custodian, any certificates of ownership, affidavits, declarations or other certificates under any tax laws now or hereafter in effect in connection with the collection of bond and note coupons; (iv) hold directly, or through the Book Entry System or Depository, all rights issued with respect to any securities held by Custodian hereunder; and (v) upon receipt of written instructions from Bank, Custodian will exchange securities held hereunder for other securities and/or cash in connection with (A) any conversion privilege, reorganization, recapitalization, redemption in kind, consolidation, tender offer or exchange offer, or (B) any exercise, subscription, purchase or other similar rights; provided, however, such exchanged securities shall continue to be held by Custodian hereunder for the benefit of Depositor if such exchanged securities constitute Collateral. Upon receipt of payments reflecting principal and interest or dividends on the securities in the Collateral Account, Custodian shall transfer to Bank such principal and interest or dividend payments (either by credit to Bank's custody account at Custodian or otherwise).

(c) Custodian shall not be liable for any loss or damage, including counsel fees, resulting from its action or omission to act or otherwise, except for any loss or damage arising out of its own negligence or willful misconduct, and shall have no obligation hereunder for any loss or damage, including counsel fees, which are sustained or incurred by reason of any action or inaction by any Securities Depository, provided, however, that such loss or damage is not the direct result of the negligence or willful misconduct of Custodian. In no event shall Custodian be liable to Depositor, Bank or any third party for special, indirect or consequential damages, or lost profits or loss of business, arising in connection with this Agreement. Both Depositor, to the extent permitted by law, and Bank agree, jointly and severally, to indemnify Custodian and to hold it harmless against any and all costs, expenses, damages, liabilities or claims, including reasonable fees and expenses of counsel, which Custodian may sustain or incur with respect to any third party claim or which may be asserted by a third party against Custodian by reason of or as a result of any action taken or omitted by Custodian in connection with operating under this Agreement, except those costs, expenses, damages, liabilities or claims arising out of the negligence or willful misconduct of Custodian or any of its employees or duly appointed agents. This indemnity shall be a continuing obligation of Depositor and Bank notwithstanding the termination of this Agreement.

(d) Custodian is hereby authorized to assign its rights and delegate its duties hereunder to any of its affiliates, whenever and on such terms and conditions as it deems necessary or appropriate to perform its services hereunder, without any further notice to Depositor or Bank. Depositor and Bank each agrees to be bound by all actions

taken by any such affiliate pursuant to the preceding sentence to the same extent as if they were taken by Custodian, it being understood and agreed that no such assignment or delegation shall discharge Custodian from its obligations hereunder. If so advised by Custodian, Depositor and Bank shall provide instructions or other information to any such affiliate rather than to Custodian.

(e) Custodian may, with respect to questions of law specifically regarding the Collateral Account, obtain the advice of reputable legal counsel and shall be fully protected with respect to anything done or omitted by it reasonably and in good faith and without negligence, willful misconduct, bad faith or fraud in conformity with such advice, provided, however, that nothing contained in this paragraph (e) shall be deemed to relieve Custodian of any of its obligations pursuant to any other provision of this Agreement.

(f) Custodian shall not be responsible for, or considered to be custodian of, any securities received by it for deposit in the Collateral Account until Custodian actually receives and collects such securities directly or by the final crediting of Custodian's account on the books of the appropriate Securities Depository. Custodian will be entitled to reverse any provisional credits to the Collateral Account that were made in anticipation of the receipt of securities or cash which were not subsequently received by Custodian. Custodian shall be entitled to rely upon any addendum, certificate or instruction actually received by Custodian and reasonably believed by Custodian to be duly authorized and delivered.

(g) Custodian shall have no duties or responsibilities whatsoever except such duties and responsibilities as are specifically set forth in this Agreement and no covenant or obligation shall be implied against Custodian in connection with this Agreement.

(h) In performing hereunder, Custodian may enter into subcontracts, agreements and understandings with third parties whenever and on such terms and conditions as it deems necessary or appropriate and which are consistent with applicable law. No such subcontract, agreement or understanding shall discharge Custodian from its obligations hereunder.

(i) In the event that assets unacceptable to Custodian are transferred to Custodian for deposit in the Collateral Account, Custodian may refuse to accept such transfer. At any time Custodian may notify Bank and Depositor that any assets held in the Collateral Account are not acceptable to Custodian, in which case Bank will substitute acceptable assets.

6. Custodian's Reliance on Pricing Services. Custodian is authorized to utilize one or more generally recognized pricing information services (including brokers and dealers of securities) in order to provide market values hereunder, and Bank and Depositor agree that Custodian shall not be liable for any loss, damage, expense, liability or claim (including attorneys' fees) incurred as a result of errors or omissions of any such pricing information service, broker or dealer.

7. Default and Remedies. If Bank defaults in performing its obligations under Section 4 above, or if Bank is declared insolvent, or if a receiver is appointed for Bank, Depositor may, after providing Bank at least three (3) business days prior written notice and opportunity to cure the default, and, if Bank fails to cure the default within such (3) business day period, instruct Custodian to transfer the Collateral or any part thereof to a broker-dealer for disposition in accordance with Depositor's instructions at a public or private sale. The proceeds of any such sale shall be applied to satisfy any indebtedness owed by Bank to Depositor, and any excess proceeds shall be returned to Bank. Depositor will also have any other remedies available under applicable law. Custodian shall be entitled to rely on and shall be held harmless from acts taken in accordance with such instructions from Depositor.

8. Termination of Agreement. Any of the parties hereto may terminate this Agreement by giving ninety (90) days prior written notice of termination to the other parties in writing specifying the date of such termination. This Agreement shall terminate on the earlier of (i) the date specified in such notice of termination, or (ii) the date on which the deposits of Depositor with Bank are paid in full. If upon termination of this Agreement Bank is still holding deposits of Depositor, Custodian shall follow such reasonable written instructions as Bank and Depositor may jointly give Custodian concerning transfer of custody of securities and related property and records; otherwise Custodian will follow Bank's unilateral written instructions in that regard.

9. Applicable Law; Other Agreements. This Agreement shall be construed in accordance with the substantive laws of the State in which Depositor is located, without regard to conflicts of laws principles thereof. Bank, Depositor and Custodian hereby consent to the jurisdiction of a state or federal court situated in the State in which Depositor is located, in connection with any dispute arising hereunder. Bank, Depositor and Custodian hereby irrevocably waive, to the fullest extent permitted by applicable law, any objection which any one of them may now or hereafter have to the laying of venue of any such proceeding brought in such a court and any claim that such proceeding brought in such a court has been

brought in an inconvenient forum. All deposit accounts of Depositor will be subject to Bank's Commercial Account Agreement, Business Account Agreement, or other applicable deposit account agreement, as in effect from time to time.

10. Force Majeure. Custodian shall not be responsible or liable for any failure or delay in the performance of its obligations under this Agreement arising out of or caused, directly or indirectly, by circumstances beyond its reasonable control, including without limitation, acts of God, earthquakes, fires, floods, wars, civil or military disturbances, sabotage, epidemics, riots, loss or malfunctions of utilities, computer (hardware or software) or communications service, labor disputes, acts of civil or military authority, or governmental, judicial or regulatory action; provided however, that Custodian shall use its best efforts to resume normal performance as soon as practicable under the circumstances.

11. Jury Trial Waiver. EACH OF BANK, DEPOSITOR AND CUSTODIAN HEREBY IRREVOCABLY WAIVES ANY AND ALL RIGHTS TO TRIAL BY JURY IN ANY LEGAL PROCEEDING ARISING OUT OF OR RELATING TO THIS AGREEMENT.

12. Miscellaneous. The headings in this agreement are for convenience of reference only and should not be used in interpreting this Agreement. If any provision of this agreement is illegal or unenforceable under applicable law, that provision should be deemed reformed so as to be enforceable to the extent permitted by applicable law, or if that is not possible, then this Agreement should be read as if that provision was never a part of it, and the remainder of the Agreement will be enforceable. THIS AGREEMENT REPRESENTS THE FINAL AGREEMENT OF THE PARTIES AND MAY NOT BE CONTRADICTED BY EVIDENCE OF PRIOR, CONTEMPORANEOUS OR SUBSEQUENT ORAL AGREEMENTS OF THE PARTIES. THERE ARE NO ORAL AGREEMENTS OF THE PARTIES. Notices given under this Agreement must be addressed as set forth below the signature of each party, and will be effective upon actual receipt by the addressee or upon refusal of delivery during the normal business hours of the addressee. To the extent that in any jurisdiction any party may now or hereafter be entitled to claim, for itself or its assets, immunity from suit, execution, attachment (before or after judgment) or other legal process, each party irrevocably agrees, to the extent permitted by law, not to claim, and it hereby waives, such immunity in connection with this Agreement.

Wells Fargo Bank
Instructions for Completing The BNY Mellon NEXEN Client Set Up Request Form.

Only complete the **Client Information** & **User Set UP** sections of the form in order to provide user(s) access to your daily collateral price reports. These areas are **Blue** for your convenience

Please type or print all required information **legibly**.

Within the **Client Information Section:**

- Complete all information.

Within the **User Set Up Section:**

- Please provide the name(s), e-mail address(s) and telephone number(s) of staff that you want to have access to NEXEN reporting.
- Since this is your initial set up, ignore the "User ID" and " Reset Code" portion. User ID(s) and Reset Code(s) will be assigned during the NEXEN set up process and returned to the primary contact by BNY Mellon shortly after the first posting of collateral to your account takes place. The User ID and Reset Code will be required if and when a user needs to have his/her password reset. A telephone number for BNY Mellon's BDS Help Desk will also be given within the returned NEXEN User set up information packet.

After your initial sign on, the NEXEN system will prompt each user to immediately change his/her password.

If you have any questions, please contact the Wells Fargo Public Funds Collateral Unit at 877-479-6603. Upon completion, please return the NEXEN Client Set Up Request along with your signed third party contract to the address provided on the contact sheet.

Overall CRA Rating

Institution's CRA Rating: This institution is rated **Outstanding**

The following table indicates the performance level of Wells Fargo Bank, National Association (WFBNA) with respect to the Lending, Investment, and Service Tests:

Performance Levels	WFBNA Performance Tests		
	Lending Test*	Investment Test	Service Test
Outstanding	X		
High Satisfactory		X	X
Low Satisfactory			
Needs to Improve			
Substantial Noncompliance			

* The Lending Test is weighted more heavily than the Investment and Service Tests when arriving at an overall rating.

The major factors that support this rating include:

Lending Test

- WFBNA's lending levels reflect excellent responsiveness to the credit needs in the majority of assessment areas (AAs). In a majority of AAs, WFBNA's lending market share, as measured by its ranking or percentage, exceeds its ranking or percentage market share of deposits.
- WFBNA's geographic distribution and distribution by income of the borrower or revenue of the farm or business is good.
- The institution is a leader in making community development (CD) loans. WFBNA's volume and nature of CD lending has a significantly positive influence on the Lending Test performance. CD lending has a significantly positive influence on 23 of the 52 rating areas and a positive influence on 15 of the 52 rating areas.
- The institution makes significant use of innovative and/or flexible loan products to meet the AA's credit needs.

Investment Test

- WFBNA's performance, as measured primarily by volume of investments, is overall good. In 22 out of 52 of WFBNA's rating areas, the bank is a leader in providing CD Investments. In most rating areas, CD investments are good or adequate.

Service Test

- Retail delivery systems are accessible in a majority of the rating areas.
- In a majority of the rating areas, WFBNA provides banking services through a number of alternative delivery systems (ADS), including full-service ATMs, telephone, online banking, mobile banking, and a mobile payment platform.
- WFBNA's opening and closing of branches have not affected the accessibility of its delivery systems, particularly in low- and moderate-income (LMI) geographies and to LMI individuals.
- Overall, hours do not vary in a way that inconveniences portions of the AAs, particularly LMI geographies. Branch hours are reasonably consistent across the AAs and any differences were reasonably explained.
- In 13 of 52 rating areas including some of the largest rating areas, the bank is a leader in providing CD services. In most other rating areas, CD services are good or adequate.

Description of Institution

WFBNA is an interstate financial institution headquartered in Sioux Falls, South Dakota. WFBNA conducts business within 35 states and 17 Multistate Metropolitan Statistical Areas (MMSA) including 88 full-scope (FS) AAs and 128 limited-scope (LS) AAs. WFBNA is a wholly-owned subsidiary of Wells Fargo & Company (WFC) headquartered in San Francisco, California. WFC is a diversified financial services company providing banking, insurance, investments, mortgage loans, and consumer finance largely through WFBNA. Based on asset size, WFC is the third largest bank holding company in the United States.

As of December 31, 2018, WFBNA has total assets of \$1.7 trillion, deposits of \$1.5 trillion, and tier 1 capital base of \$143 billion. Included in the deposits are approximately \$59.6 billion held in foreign offices. WFBNA's net loans and leases were \$914 billion, representing 54.6 percent of total assets. Approximately 50 percent of the bank's domestic loan portfolio is comprised of real estate loans, which are predominately loans secured by 1-4 family residential properties. Commercial and industrial loans comprise 21 percent of the domestic loan portfolio, loans to individuals for household, family, and personal purposes comprise 12 percent of the domestic loan portfolio, and miscellaneous other loans and leases comprise the remaining 18 percent. At the request of WFBNA and in accordance with provisions of the CRA, this evaluation considers affiliate activities. Refer to Appendix A for a complete list of subsidiaries, affiliates, and products considered.

WFBNA is a full-service bank with over 5,600 branches and over 13,500 ATMs. WFBNA is the largest mortgage lender and servicer in the U.S. The bank offers a broad spectrum of financial products and services to consumers and businesses centered in retail and business banking, mortgage banking, trust services, and investment management. The bank's business strategy focuses on retail and wholesale banking with an emphasis on mortgage, small business, and CD lending. The bank, through its Wells Fargo Home Mortgage division, provides mortgage services to all 50 states through more than 718 mortgage stores, the WFBNA branch network, and the Internet.

There are no known legal, financial or other factors impeding the bank's ability to help meet the credit needs in its AAs.

WFBNA was rated "**Needs to Improve**" at the previous CRA evaluation dated September 30, 2012. In the 2012 Performance Evaluation (PE), the bank's overall performance under the Lending and Investment tests was rated Outstanding and under the Service test was rated High Satisfactory; however, the overall rating was lowered two rating levels from "Outstanding" to "Needs to Improve" due to numerous evidence of discriminatory or other illegal credit practices (DOICPs). The following DOICPs were considered and factored in the rating set out in the 2012 CRA PE:

- Fair Housing Act (FHA) and Equal Credit Opportunity Act (ECOA) violations regarding subprime mortgage loans.
- Unfair or Deceptive Acts and Practices (UDAP) violations regarding subprime loans.
- Unfair, Deceptive, or Abusive Acts and Practices (UDAAP) violations regarding Sales Practices.
- The Servicemembers Civil Relief Act (SCRA) violations for non-judicial foreclosures affecting service members.
- SCRA violations regarding motor vehicle loans.
- UDAP violations regarding debt cancellation products.
- UDAP violations regarding private student loans.

- Real Estate Settlement Procedures Act violations involving home mortgage transactions.
- FHA violations regarding home mortgage loans.
- FHA violations regarding real estate owned properties.

The above DOICPs which we considered in the 2012 CRA PE were not again considered in the current PE since no additional violations were discovered since the prior evaluation. Further actions taken or penalties issued by other regulatory enforcement entities since the issuance of the prior PE that were premised on conduct addressed in the above DOICP, but brought against a party other than the bank or citing violations other than a DOICP, were not considered in the current PE. Recent actions taken by the Department of Justice and Security Exchange Commission are premised on legal violations that are not typically included within the scope of DOICPs for purposes of CRA. Similarly, the OCC's recent action regarding the institution affiliated parties would not be included within the scope as it involved violations by individuals and not conduct by the bank. Refer to the 2012 CRA PE for additional details on the DOICP listed. Refer to the Discriminatory or Other Illegal Credit Practices Review section of this PE for details on other DOICPs considered during this CRA evaluation.

Scope of the Evaluation

Evaluation Period/Products Evaluated

The bank's CRA performance was evaluated using Large Institution CRA Examination Procedures. The evaluation considers home mortgage loan products reported under the Home Mortgage Disclosure Act (HMDA), small loans to businesses and small loans to farms, retail services, and qualified CD lending, investments, and services. Consumer loans do not represent a majority of the bank's CRA loan activity; therefore, this lending provided no material support for conclusions or ratings and is not presented. Loans reported pursuant to the HMDA and CRA data collection requirements for 2012-2018 were included in the review. The review included both loan originations and purchases. The evaluation period for the Lending Test is January 1, 2012 through December 31, 2018. The evaluation period for CD loans, investments, and services is January 1, 2013 through December 31, 2018. Please refer to Appendix A for information on the subsidiaries, affiliates, and products reviewed during this evaluation.

The evaluation period covers changes in demographics between the 2010 U.S. Census data and the 2015 American Community Survey (ACS) and requires data to be organized and analyzed based on the applicable census period. For the lending test, the bank's lending activity related to calendar years 2012-2016 was compared to the 2010 U.S. Census demographic data. The bank's lending activity for 2017-2018 was compared to the 2015 ACS. Refer to Appendix D for information regarding performance data for both evaluation periods: 2012-2016 and 2017-2018.

This evaluation relied on records provided by the bank, public loan and financial information, demographic data from the U.S. Census Bureau, Dun & Bradstreet (D&B), community contacts, and loan information reported under the HMDA and CRA. The scope of the evaluation is summarized in Appendix A, Summary of MMSA and State ratings is summarized in Appendix B, definitions and common abbreviations utilized in this evaluation are further defined in Appendix C, and Tables of Performance data are in Appendix D.

Data Integrity

Prior to the start of this evaluation, a statistical sample of HMDA and CRA loan files was selected and tested to determine the accuracy of the data. In addition, a sample of CD loans, investments, grants, and services were reviewed to ensure they met the regulatory definition for CD. OCC concluded that the HMDA and CRA loan data submitted by management could be relied upon for this evaluation. The bank strengthened its overall process for CD activities and a follow-up review concluded that CD loans, investments, grants, and services are reliable for this evaluation.

Selection of Areas for FS Review

WFBNA has defined 216 AAs within 35 states and 17 MMSAs. Each MMSA where the bank has offices received a FS review. In each state where the bank has an office, one or more AAs within that state was selected for a FS review. The FS AAs in each state represent a substantial majority of each state's lending and deposit activity. For purposes of this evaluation, bank delineated AAs located within the same metropolitan statistical area (MSA), MMSA, or combined statistical area (CSA) are combined and evaluated as a single AA. Similarly, bank delineated non-MSA AAs within the same state are combined and evaluated as a single area. These combined AAs may be evaluated as FS or LS.

Significant differences across portions of the combined non-MSA AAs, such as in demographics, economic conditions, competition, other performance context factors, or gaps in lending or CD activities, are described in the PE and considered when evaluating performance in the combined non-MSA area, if FS procedures are used. Similarly, narrative comments address performance at the MSA or MMSA level, even if the bank has defined two or more metropolitan divisions (MD) within the same MSA, or two or more MSAs within the same MMSA as separate AAs. Examiners may also present combined comments related to MSAs within a CSA. Refer to the “Scope” section under each State Rating section for details regarding how FS AAs were selected. Refer to appendix A, Scope of Examination, for a list of FS and LS AAs.

Ratings

The bank’s overall rating is a blend of the state and MMSA ratings. State ratings are generally based on conclusions of the AA(s) in the state reviewed using FS evaluation procedures; however, LS AA ratings were also considered. For some of the states including Alaska, Florida, Idaho, Indiana, Minnesota, Montana, North Carolina, Ohio, South Carolina, Virginia, Wisconsin, and Wyoming, conclusions of LS AAs affected the rating either negatively or positively and are highlighted in the Conclusions for Areas Receiving LS Reviews section of each respective rated areas.

The State of California is the largest market in terms of lending at 21.8 percent, deposits at 20.3 percent, and branch distribution at 18.3 percent and accounts for the largest weight in the overall conclusions. Additionally, 12 other rated areas when combined with California represent the bank’s most significant markets in terms of lending, deposits, and branch distribution. In order of significance, these rated areas are: Texas, Florida, New York MMSA, Washington MMSA, Georgia, Arizona, Philadelphia MMSA, Colorado, North Carolina, Minneapolis MMSA, Washington, and Virginia. These combined rated areas account for 76.3 percent of the bank’s HMDA and CRA reportable loans during the evaluation period, 57.3 percent of the total allocated deposits, and 76.6 percent of the branch network.

The PE is presented in alphabetical order first by MMSA rated areas then by each state. MMSA and state ratings are based on performance in all applicable FS and LS bank AAs. Refer to the “Scope” section under each State and MMSA Rating section for details regarding how the areas were weighted in arriving at the respective ratings.

Description of Factors Considered Under Each Performance Test

Lending Test

Due to the changes in census data during the evaluation period, the bank’s Lending Test performance was evaluated separately for 2012-2016 and 2017-2018. When arriving at overall conclusions, more weight was placed on the bank’s lending performance in 2012-2016 than its performance in 2017-2018, as this was the time period of greatest significance to evaluate conclusions. The bank’s lending in all AAs was evaluated. For the various loan products considered under the Lending Test, generally home mortgage loans received greater weighting than small loans to businesses in developing conclusions due to a higher volume of HMDA loans during the evaluation period. All home mortgage products (home purchase, home improvement, and home refinance) were reviewed with conclusions based on the aggregate of all home mortgage loans and consideration of performance context that is discussed in each applicable rating area section within the Lending Test. Small farm lending is not a primary product in any of the bank’s AAs and the volume of small farm lending was minimal for most of the rated areas

which precludes any meaningful analysis and conclusions. Small farm lending was reviewed and analyzed for all rated areas; however, only four rated areas (Fargo MMSA, Illinois, North Dakota, and South Dakota) had sufficient volume that contributed to those respective state's overall ratings. In these markets, small farm lending accounts for approximately 10 to 15 percent of the overall lending and is presented in the analysis. Please refer to the Lending Test in these following rated areas concerning small loans to farms.

In rating areas where there was a significant difference in weighting, it is noted under the Scope of the Evaluation section. The loan distribution analyses compared HMDA loans and loans to small businesses and small farms to demographic and aggregate data under the applicable lending test components. Aggregate data illustrates how the bank is performing relative to other lenders in the AA and provides context as to the reasonableness of the bank's performance. All peer aggregate lending data used in the analysis is from 2012-2017. Aggregate lending data for 2018 was not available.

Throughout all rating areas, as data was available, equal emphasis was given to the geographic and borrower distribution components of the Lending Test. The analysis of the distribution of loans to geographies with different income levels was given greater consideration to the bank's performance in moderate-income geographies when there were a limited number of owner-occupied housing units or businesses in the low-income geographies. For borrower distribution, consideration was given to the impact that income and poverty levels, housing costs, and saving for a down payment have on limiting homeownership opportunities of LMI individuals and families. Additionally, consideration was given to the impact of home affordability on LMI borrowers in higher cost areas when comparing the distribution of WFBNA mortgage loans to the demographics. In these higher cost markets, it is difficult for many LMI borrowers to afford a home as the area's median housing value is typically too high for conventional mortgage loan qualification. As such, more emphasis was placed on the bank's lending results to LMI borrowers relative to the aggregate's performance rather than demographic data.

For AAs comprised of contiguous MSAs that are part of a CSA, the analysis of the bank's performance was conducted at the MSA level. If there were no anomalies at the MSA level, the bank's performance is presented for AAs at the CSA level. For each FS review, economic information is separately detailed for each MSA area within a CSA AA. For the Lending Test, the analysis included both the number and dollar volume of CRA lending. The analysis of lending emphasized the number of loans rather than dollar volume because it is a better indicator of the number of businesses, individuals, and farms served. Lending performance by dollar volume is noted when there are anomalies.

The analysis considered the number and dollar volume of CD loans with emphasis placed on those loans that were particularly innovative, complex, or responsive to the needs of the AA. CD lending in an AA influenced the Lending Test rating either positively, neutrally, or negatively, to the extent of opportunity, responsiveness, and performance context. In situations where the bank's CD lending positively influenced the rating, it is described in the conclusions for the rating area. The dollar amount of CD loans was compared to the tier 1 capital allocated to the AAs to gain a common perspective regarding the volume of CD lending activity. Tier 1 capital was allocated to the rating areas and AAs based on the percentage of bank deposits in the AAs.

Investment Test

The analysis considered the volume of qualified investments made during the current evaluation period and qualified investments that were made prior to the current evaluation period and, for which, are still

outstanding with emphasis placed on those investments that were particularly innovative, complex, or responsive to the needs of the AA. The amount of consideration given to the current and prior period investments is based on the responsiveness of the investments to the needs in the AAs.

The analysis compared the dollar amount of qualified investments made in the current evaluation period and prior evaluation periods to the tier 1 capital allocated to the AAs to gain a common perspective regarding the volume of investment activity. Tier 1 capital was allocated to the rating areas and AAs based on the percentage of bank deposits in each AA.

Service Test

Primary consideration was given to the bank's performance in delivering retail products and services to geographies and individuals of different income levels through the bank's distribution of branches. The analysis focused on branches located in LMI geographies but also considered branches identified by WFBNA as being within close proximity to LMI geographies that are reasonably likely to serve the LMI area based on circumstances such as the location of other services used by residents of the LMI area or transportation patterns. Through sampling, OCC verified and confirmed that these branches held deposit accounts of, and mortgage loans to individuals in adjacent LMI geographies. OCC also verified that there are no barriers or other impediments that would prevent a resident of the LMI geography from obtaining full use of the bordering branch's banking services. The analysis also evaluated the range of services and products offered by all of the bank's branches. Services and products offered at all branches are consistent throughout the branch network. The analysis specifically focused on any differences in branch hours and services in LMI geographies compared to those branches in close proximity to LMI geographies. OCC did not note any material differences in any AA. As such, branches within close proximity to LMI geographies and branches within LMI geographies were given equal consideration in the evaluation.

Where the bank opened or closed branches within an AA, the overall impact of the change was evaluated based on the census data that was in effect as of the date of the change. If no branches were opened or closed in an AA, the analysis did not include this performance element.

WFBNA offers traditional banking products including mortgage, consumer, small business, and small farm loans at all branch locations within the AAs. In 2016, the Wells Fargo EasyPay Pre-Paid Debit Card, a reloadable prepaid card that can be used to make purchases, withdraw cash, and pay bills became available in all markets. In addition, the bank provides banking services through a number of ADS, including full-service ATMs, telephone, online banking, mobile banking, and Zelle, an online and mobile payment platform. Zelle is also compatible with other 3rd party mobile payment platform applications such as Venmo and PushPay. These services are offered to all bank customers, are available throughout all of the bank's markets, and give customers flexibility in choosing services that fit their needs. Online and mobile banking has become an effective delivery method allowing customers to access their accounts anytime from any location with the right equipment. All ADS are available to customers 24 hours a day and enhance the overall accessibility of services.

The bank's record of providing CD services was evaluated in AAs that received FS reviews. The primary consideration of the analysis of CD services was the responsiveness to the needs of the community.

Community Contacts

The evaluation also reviewed and considered community contacts made during the evaluation period with community groups, local government representatives, realtors, and business leaders within the various AAs as well as community needs assessments conducted by the bank. Community contacts are utilized to ascertain the AA's credit needs, demographics, and economic conditions. During the course of the evaluation, community contacts are referenced in each AA that received a FS review.

The review of community contacts indicates that urban and rural areas continue to have various affordable housing, CD, and economic development needs that are not being met. Most of the contacts noted that the economy in their area has stabilized and/or is improving. Although unemployment rates in most areas have declined, they still remain fairly high in some of the AAs. Affordable housing was consistently noted by numerous community contacts as a credit need throughout the AAs. Community contacts involved with economic development indicated that flexible financing options for small businesses are important to creating additional job growth in communities. Small businesses were identified as a major factor in expanding employment opportunities in both urban and rural areas. Many contacts noted that small businesses have faced limited access to credit in recent years due to tightened lending standards. A number of contacts noted that demand for micro small business loans is very strong, but these loans are not generally available from banks. In addition, contacts identified needs for micro small business loans, small dollar consumer loans, affordable mortgage loans, and more flexible lending standards for small businesses.

Other Information

Assessment Areas – All AAs consisted of whole geographies and met the requirements of the regulation. The areas reasonably reflected the different trade areas that the bank's branches could service and did not arbitrarily exclude any LMI areas.

Lending Gap Analysis – OCC reviewed summary reports and maps, and analyzed home mortgage, small business, and small farm lending activity over the evaluation period to identify any gaps in the geographic distribution of loans in all FS AAs. OCC did not identify any unexplained conspicuous gaps in any AA reviewed.

Lending in Assessment Area - A substantial majority of the bank's loans are in its AAs. The bank originated and purchased, in aggregate, 83.5 percent by number and 86.8 percent by dollar volume of its total loans inside the bank's combined AAs during the evaluation period. This analysis is performed at the bank, rather than the AA, level. Loans made by affiliates were not considered in this analysis.

Table D - Lending Inside and Outside of the Assessment Area										
Loan Category	Number of Loans					Dollar Amount of Loans \$(000s)				
	Inside		Outside		Total	Inside		Outside		Total

<i>Due to rounding, totals may not equal 100.0</i>										

Innovative or flexible lending Programs - The bank offers several flexible loan products that addressed the needs of LMI borrowers and geographies and small businesses during the evaluation period. In those areas where these flexible loan programs were given positive consideration, it is noted within the Lending Test of the respective AA. The following programs offered throughout WFBNA's footprint are particularly responsive to the credit needs of its communities.

- *yourFirst Mortgage*SM - The program was launched in May 2016 to address barriers to homeownership and encourages customer preparedness for homeownership by offering a \$750 closing cost credit for customers who choose to complete homebuyer education. Since the launch in May 2016, the program has funded over 54,000 loans totaling \$11.6 billion. Of the total volume, approximately 22.5 percent in 2016, 25.4 percent in 2017, and 29.2 percent in 2018 were originated to LMI borrowers and consistently ranked higher than the overall LMI lending rate in the industry. WFBNA continues to make enhancements to the product to improve the ability to create sustainable LMI homeowners. The program has features to assist customers with overcoming obstacles to purchasing a home including:
 - As little as 3 percent down payment required – less if the customer uses an approved Down Payment Assistance Program.

- No requirements that a borrower be a first-time home buyer, purchase in specific census tracts, or meet a specific income limit to qualify.
- Down payment assistance programs and monetary gifts may be used toward a down payment.
- Alternative types of credit resources may be accepted – such as history of rent and utility payments.
- HUD-approved homebuyer education or counseling is not required. However, customers who successfully complete education or counseling receive \$750 credit for closing costs. Over 77 percent of all customers elect to complete counseling and receive this valuable benefit.
- *NeighborhoodLIFTSM* - the program was launched in February 2012 in the wake of the housing crisis to help stabilize neighborhoods deeply affected by the foreclosure crisis through a commitment to home lending, homebuyer education, and homebuyer support. Today, the NeighborhoodLIFT program has evolved to help address affordability challenges for LMI homebuyers. The program requires an applicant who is approved and receives a down payment assistance grant of \$7,500 to \$15,000, depending on market areas, to complete eight hours of pre-purchase counseling and education from a U. S. Housing and Urban Development (HUD)-certified housing counseling agency. Homebuyers may obtain financing from any participating lender. Through the program, WFBNA has committed more than \$430 million of down payment assistance, Local Initiative grants, housing counseling, and homebuyer support and education to create sustainable homeownership. During the evaluation period, WFBNA originated over 4,100 loans totaling \$671 million under this program in the AAs. The NeighborhoodLIFTSM program is also the single largest corporate philanthropic effort of its kind in WFBNA's history and is funded by the Wells Fargo Foundation. Key components of the NeighborhoodLIFTSM effort provide support in three major areas:
 - Down payment assistance for first-time homebuyers and potential homebuyers ready to re-enter the market.
 - Locally designed Local Initiatives and LIFT the Block programs to meet local housing priorities that support community revitalization efforts.
 - Local outreach events designed to provide homebuyer education and support.
- **Small Business® Diverse Community Capital Program (DCC)** takes an innovative approach to address challenges diverse small business owners face when starting or growing their business. The DCC program was launched in 2015 with an initial, three-year, \$75 million commitment to increase capital and technical assistance available to diverse small businesses that may not qualify for conventional bank loans. The DCC program is a collaboration between WFBNA and Opportunity Finance Network (OFN), a national network of Community Development Financial Institutions (CDFIs), to respond to issues identified in a national Gallup Survey that revealed that diverse small businesses were challenged accessing the credit they needed to launch or grow their business. Funds are used by CDFIs to increase lending to diverse-owned small businesses; provide educational resources and technical assistance they need to grow; and improve, create or add resources, materials, or programs to better serve their target market. As of December 2018, WFBNA fulfilled its \$75 million commitment and 88 CDFIs have received DCC awards serving small businesses in 37 states. Awardee CDFIs serve both rural areas and urban centers. According to OFN, DCC awardees have closed more than 8,000 loans totaling \$391 million to diverse small business clients. Diverse small businesses that received loans from awardee CDFIs have retained more than 21,000 jobs and created more than 15,000 jobs as a result of accessing the capital and development services they needed. WFBNA has pledged another \$100 million to continue the program through 2020.

- For small businesses, the bank offers loans guaranteed by the U. S. Small Business Administration (SBA), including SBA 504, SBA 7a, SBA 503, and SBA Community Express loans and lines of credit. SBA loans have more flexible terms than conventional loans. During the evaluation period, WFBNA originated 687 SBA loans totaling \$1.3 billion in its AAs.

Innovative or flexible Retail Service Programs - WFBNA offers several retail services across its AAs that address the needs of all of its customers including LMI individuals and small businesses. The following highlights some examples of the bank's programs:

- WFBNA's Online Mortgage Application was launched in early 2018 which combines Wells Fargo source data with a digital interface to create a "you know me" experience that is compelling for current Wells Fargo customers. When a Wells Fargo customer logs into the online mortgage application, the customer won't be asked to provide certain information that Wells Fargo already has in their database. The online mortgage application is integrated with the sales team, giving customers the option to engage with a specialist at any point during the process.
- In 2014, WFBNA introduced The Business Plan Tool and Competitive Intelligence Tool to deliver resources, guidance, and services for business owners. This tool offers useful guidance on topics such as writing a business plan, marketing a business, managing cash flow, and building credit to help business owners increase their knowledge and confidence. The site provides information about CDFIs that can be a source of external funding, when traditional bank financing is not available.
- WFBNA participates in the Volunteer Income Tax Assistance (VITA) to provide free tax preparation to LMI taxpayers, the elderly, and those with disabilities. IRS certified volunteers provide free basic income tax return preparation with electronic filing to qualified individuals. Receiving free tax preparation services and help accessing eligible tax credits such as the Earned Income Tax Credit can be life changing for LMI families. WFBNA actively participates in 68 VITA programs across the footprint through volunteer hours, grants, and financial education. During the exam period, WFBNA team members volunteered nearly 5,000 hours preparing tax returns and local markets provided numerous grants to support local VITA programs.
- Hands on Banking®/El futuro en tus manos® program is WFBNA's free, public, non-commercial, financial capability program offering a comprehensive suite of financial education courses designed for instructor-led group learning or self-paced individual use. The goal of the program is to be the relevant and timely resource of choice for educators and individuals to develop the financial capability to successfully navigate throughout life's financial ups and downs and succeed financially. The program has curriculum designed for specific audiences including: preparing young adults (9th grade – College age) for financial futures; small business owners who have been declined for business credit; addressing unique financial education needs of military personnel; and training to seniors on how to prevent and detect elder financial abuse. During the exam period, over 15,000 team members participated in the campaigns which yielded nearly 56,000 hours of Hands on Banking® training and reaching over 800,000 people through classes, workshops, and webinars.
- Wells Fargo de novo branches provide important face-to-face interactions to serve customers and help them meet their financial dreams and goals. WFBNA continues to add new locations in communities across the country serving the financial needs of its LMI residents and businesses. In 2017, WFBNA added two de novo LMI branches to its network. Nine additional LMI branches were opened in 2018 with four in California, two in Florida, one in Texas, and one in New York. These de novo LMI branches delivered much needed banking services to

underserved communities and in areas designated for redevelopment, closing a gap in coverage within the areas.

Community Development Initiatives - WFBNA makes significant use of innovative and/or complex CD investments and loans to support CD initiatives. For examples of the bank's CD initiatives, please see the conclusions in each rated area under CD activities. Below are the types of CD investment and loan vehicles that WFBNA uses, most of which are complex or innovative, and most often WFBNA serves in a leadership role to implement its CD activities.

- *Low Income Housing Tax Credit (LIHTC)* - WFBNA's primary vehicle for qualified CD investments and loans is LIHTCs. The LIHTC program was established as part of the Tax Reform Act of 1986. LIHTCs provide tax incentives to encourage individual and corporate investors to invest in the development, acquisition, and rehabilitation of affordable rental housing. They are an indirect federal subsidy that finances low-income housing. This allows investors to claim tax credits on their federal income tax returns. To qualify for the credit, a project must meet strict requirements to qualify as a low-income project. Developers are required to set aside at least 40 percent of the units for renters earning no more than 60 percent of the area median family income (MFI) (the 40/60 test), or 20 percent of the units for renters earning 50 percent or less of the area MFI (the 20/50 test). These units are subject to rent restrictions where the maximum permissible gross rent, including an allowance for utilities, must be less than 30 percent of imputed income based on the area MFI. State selection procedures for tax credit allocations often encourage developers to provide more than the minimum number of affordable units. Because these credits are only available for affordable rental units, many applications designate 100 percent of the units in properties as affordable. They also reserve some of the units for renters earning well below 50 percent of the area's MFI. During the evaluation period, WFBNA participated in over 690 new LIHTC offerings through direct investments and/or loan syndications. These investments, some of which benefited multiple AAs, totaled approximately \$11.6 billion and were sponsored by federal, state, and local housing for profit and nonprofit agencies and groups. Additionally, WFBNA is still participating in 759 prior period LIHTC investments totaling approximately \$1.2 billion.
- *Subordinate Debt (formerly known as Equity Equivalent Investments "EQ2")* – Due to an accounting change in 2018, this product was changed from an investment to a CD loan product. WFBNA has been a leading provider of Subordinate Debt to CDFIs and other nonprofit affordable housing developers around the country for two decades with long-term, low-rate, and unsecured instruments. Through WFBNA's funding, CDFIs provide innovative and flexible credit products that address affordable housing and CD needs in the bank's AAs. CDFIs help to promote healthy communities by providing early-stage credit, capital, and financial services to small businesses, affordable housing and community facility developers, community organizations, and other types of borrowers. CDFIs can leverage these instruments with senior debt to build their lending capacity. WFBNA, on average, provides approximately \$40 million in subordinate debt on an annual basis and as of year-end 2018, the outstanding portfolio totals over \$270 million to 215 CDFIs nationwide. Many of the subordinate debts provide for CD in areas where private investor funds are not available. Additionally, WFBNA funds have helped to facilitate additional CD investments from other parties.
- *New Markets Tax Credit (NMTC)* – WFBNA uses the NMTC programs to help meet the credit needs of the AAs. The NMTC program, authorized by the U.S. Treasury, incentivizes business and real estate investment in low-income communities through a federal tax credit. These tax credits help revitalize economically distressed and underserved communities. NMTC credits are a critical financing tool, filling gaps in development costs that may prevent projects from arising.

Through NMTC allocations, WFBNA reduces borrowing costs for nonprofits and entrepreneurs by offering below-market rate financing on more favorable credit terms than conventionally available and can help smaller community-focused projects such as child care centers, health care clinics, and community art centers secure funding and bring their much-needed services to low-income neighborhoods. Since the inception of its NMTC platform, Wells Fargo has invested over \$3.5 billion in NMTC investments nationally. These investments have leveraged an estimated \$4.3 billion in additional capital, much of which was sourced by new entrants into the NMTC industry, creating an estimated 30,000 permanent jobs and millions of square feet of mixed-use, commercial, and community-oriented space across the country. During the evaluation period, WFBNA participated in 128 new NMTC projects totaling \$1.5 billion. Additionally, WFBNA is still participating in 22 prior period NMTC investments totaling approximately \$278.3 million.

- *Mortgage Backed Security (MBS)* - MBSs provide ownership interest in a pool of single-family mortgages that act as the underlying asset of the security. The pools are comprised of loans originated entirely to LMI borrowers who reside in WFBNA's AAs. During the evaluation period, WFBNA made over 1,300 MBS investments totaling \$600 million. Additionally, there are still 949 prior period investments totaling \$146 million on the bank's books.
- *The Homeownership Counseling Grant Program (HCGP)* – WFBNA has implemented this program to provide financial resources to local nonprofit housing organizations to create affordable and sustainable homeownership opportunities for LMI individuals. This grant program focuses on homebuyer counseling assistance that addresses unique financial circumstances and housing issues; homebuyer education that covers the home-buying process including how to maintain a home, budgeting, the importance of good credit, and other home buying related subjects; and foreclosure prevention counseling efforts designed to help families keep homes that are facing foreclosure and stabilize the overall housing market. During the evaluation period, WFBNA has provided over 1,200 grants totaling \$11.7 million to nonprofit housing organizations throughout the bank's AAs.
- *The Priority Markets Program (PMP)* – WFBNA implemented the PMP to support projects, programs, and initiatives focused on neighborhood revitalization and help remove barriers to sustainable housing in LMI communities. Grant funds are used for costs associated with development or redevelopment of affordable housing and homebuyer subsidies, such as down payment/closing costs and homebuyer counseling. Funds are also used for renovation of foreclosed and/or abandoned properties for resale to LMI homebuyers. The Community Relations team identifies nonprofits with successful histories of supporting LMI communities that are responding to the needs in the community. Regional teams review the applications and select the projects that are most impactful and responsive to the needs in the market. During the evaluation period, WFBNA has provided 339 grants totaling \$32.2 million to nonprofit organizations throughout the bank's AAs.

Discriminatory or Other Illegal Credit Practices Review

Pursuant to 12 C.F.R. §25.28(c) or §195.28(c), respectively, in determining a national bank's or federal savings association's (collectively, bank) CRA rating, the OCC considers evidence of discriminatory or other illegal credit practices in any geography by the bank, or in any assessment area by an affiliate whose loans have been considered as part of the bank's lending performance. As part of this evaluation process, the OCC consults with other federal agencies with responsibility for compliance with the relevant laws and regulations, including the U.S. Department of Justice, the U.S. Department of Housing and Urban Development, and the Bureau of Consumer Financial Protection, as applicable.

The OCC identified the following **public** information regarding non-compliance with the statutes and regulations prohibiting discriminatory or other illegal credit practices with respect to this institution:

- Evidence of unfair acts or practices, in violation of Section 5 of the Federal Trade Commission Act, 15 U.S.C. §45(a)(1). On April 20, 2018, WFBNA signed consent orders with the OCC and CFPB and agreed to pay \$1 billion in civil money penalties to the agencies. As a result of the bank's mortgage interest rate lock extension (IRL) fee practices, customers were improperly charged mortgage interest rate extension fees when the bank should have borne those costs for mortgage loans that originated between September 2013 through March 2017. The bank's mortgage interest rate lock extension fee practices constituted unfair acts or practices in or affecting commerce in violation of the unfair acts or practices provision of Section 5 of the Federal Trade Commission Act, 15 U.S.C. § 45(a)(1), and were unsafe or unsound. Customer harm (the nature of the evidence) was material from a customer and monetary standpoint with the bank reimbursing approximately 111,000 borrowers to date totaling \$100.8 million. WFBNA reimbursed any borrower, who paid a fee during the period and responded to the bank's notification of potential harm letters and reimbursed the borrower. The bank is assessing potential borrower harm pre-May 2012 to 2010 period. Bank management has committed to reimbursing any subsequently identified borrowers, similarly. Management has taken appropriate corrective actions to strengthen home lending compliance management including IRL control processes and audit oversight to prevent future violations of this nature. For further information, refer to the OCC's April 20, 2018 Compliance Consent Order AA-EC-2018-15.
- WFBNA violated UDAAP (12 USC 5531(c)(1) and 5536(a)(1)(B)). Certain employees in Texas knowingly arranged with loan closing agents to overcharge customers the difference between the amounts estimated on the good faith estimates (GFEs) and the actual closing costs. This violation involved customers who refinanced their previous home loans to improve the rate and term. The practice occurred from January 2009 through May 2013, a 53-month period. The practice, which was isolated to the state of Texas, affected approximately 27,300 accounts. The average amount overcharged was approximately \$30 per loan. The total accounts affected during the CRA evaluation period (January 2012 through May 2013) is approximately 8,700 accounts. This practice was self-disclosed by the bank via an internal whistleblower reported incident. The bank remediated each customer affected by this unfair and deceptive practice in the amount of \$50 for a total of \$1.4 million. Management strengthened controls over this process by limiting the number of mortgage loan officers authorized to originate these loans, establishing a pre-closing second-level review of all such loans, and implementing post-funding quality assurance transactional testing.

The OCC does not have additional public information regarding non-compliance with statutes and regulations prohibiting discriminatory or other illegal credit practices with respect to this institution. In determining this institution's overall CRA rating, the **OCC has considered information that was made available to the OCC on a confidential basis** during the evaluation period.

The CRA performance rating was not lowered as a result of these findings. We considered the nature, extent, and strength of the evidence of the practices; the extent to which the institution had policies and procedures in place to prevent the practices; and the extent to which the institution has taken or has committed to take corrective action, including voluntary corrective action resulting from self-assessment; and other relevant information.

The OCC will consider any information that this institution engaged in discriminatory or other illegal credit practices, identified by or provided to the OCC before the end of the institution's next performance evaluation in that subsequent evaluation, even if the information concerns activities that occurred during the evaluation period addressed in this performance evaluation.

Multistate Metropolitan Statistical Area Rating

Augusta-Richmond County, GA-SC (Augusta MMSA AA)

CRA rating for the Augusta MMSA AA¹: Satisfactory

The Lending Test is rated: High Satisfactory

The Investment Test is rated: Needs to Improve

The Service Test is rated: Low Satisfactory

The major factors that support this rating include:

- Good level of lending activity;
- Good geographic distribution of loans;
- Good borrower distribution of loans;
- Adequate level of CD loans;
- WFBNA's use of flexible products has a neutral impact on the Lending Test;
- Poor level of CD investments;
- Retail delivery systems are accessible to all portions of the AA; and
- Adequate CD services.

Description of Institution's Operations in Augusta MMSA AA

WFBNA delineated one AA within the Augusta MMSA AA and includes the Augusta-Richmond County, GA-SC MSA. Refer to Appendix A for a complete description of the AA. The Augusta MMSA AA represents the 37th largest rated area by deposits. WFBNA has \$1.8 billion of deposits in the Augusta MMSA AA representing, 0.1 percent of adjusted deposits. In the Augusta MMSA AA, WFBNA ranked 1st out of 19 depository institutions with 21.7 percent market share. The 2nd and 3rd banks within the MMSA, in terms of deposits, are South State Bank with 15.8 percent and Bank of America with 11.4 percent market share. WFBNA operates 17 branches and 48 ATMs within the Augusta MMSA AA, representing 0.3 percent of the bank's branches and 0.3 percent of the bank's ATMs. In comparison to the percentage of deposits and branching network, the bank originated and purchased approximately \$3.5 billion in loans or 0.2 percent of total bank loan originations and purchases during the evaluation period in the AA. The bank's primary loan products in the Augusta MMSA AA are home mortgage and small loans to businesses.

Demographic

The following table provides a summary of the demographics that include housing and business information for the Augusta MMSA AA. Table A indicates that the volume of owner-occupied units (OOU) is very small in low-income census tracts (CT) and approximately 40 percent of families in the AA are LMI. The area's median housing value in the Augusta MMSA AA is 2.3 times the area's median income, but 2.9 times moderate-, and 4.7 times low-income, indicating a limited proportion of OOU are affordable to LMI individuals. Median rents and the high percentage of families below poverty level suggest rental housing is also unaffordable for many low-income residents.

¹This rating reflects performance within the multistate metropolitan statistical area. The statewide evaluations do not reflect performance in the parts of those states contained within the multistate metropolitan statistical area.

Economic Data

According to the April 2018 Moody's Analytics report, Augusta's economy is among the fastest-growing economies in Georgia. Growth is broad-based but professional, business services, and construction are leading the way. Year-over-year job growth is twice the national average, and both goods producing and service providing industries are expanding at their fastest pace in more than three years. Thanks to booming Fort Gordon and growth at Plant Vogtle nuclear power plant, the job mix in the Augusta MMSA has improved over the past year with outsize gains in medium- and high-paying industries. Increased spending on cybersecurity has benefited the Augusta's economy. The \$1.3 trillion omnibus bill, passed in March 2018, will raise spending by \$80 billion above the caps set in the Budget Control Act of 2011. Consumer industries have been on a tear in the Augusta MMSA but will come off the boil as the expansion matures.

The outlook for the housing market is above average thanks largely to favorable demographics trends. Low inventory has been a hurdle nationally and Augusta is no exception. Home sales have slowed but a lack of supply is preserving upward pressure on prices.

The major economic drivers for the MMSA are federal government; Waste Treatment and Disposal; and Architectural, Engineering & Related services. The largest employers in the Augusta MMSA includes the U.S. Army Signal Center & Fort Gordon, Westinghouse Savannah River Co., and Georgia Regents University. According to the U.S. Bureau of Labor Statistics (BLS), the unemployment rate for the first quarter of 2018 was 4.8 percent and has decreased significantly from 9.1 percent at the beginning of the

evaluation period. The unemployment rate in the AA was slightly higher than both the overall States of Georgia (4.1 percent) and South Carolina (3.4 percent).

Community Contact

The analysis takes into consideration comments provided by two community contacts that serve the bank's Augusta MMSA AA. One of the community contacts represents a government housing and community development corporation (CDC) and the other represents a rural CD agency in Burke County.

The economic development organization contact serves rural areas in the AA including Burke County. They noted that affordable housing was a need being met through their Single-Family Housing Mortgage Program, which serves households at 80 percent and below the average MFI. The program finances up to 100 percent of the loan and provides a down payment/closing costs subsidy up to 3 percent. Households above 80 percent of the area MFI were referred to local banks for the guarantee program. The contact indicated that there was no waiting list. However, the contact noted that credit was an issue. The county worked with other local agencies in Augusta to provide hands-on basic education, technical assistance, and homebuyer counseling. The contact mentioned that banks could become more involved with these programs as well as financing offered through the Central Savannah River Area Regional Commission. There is also a need in the AA for business lending in the form of business loans from \$25,000 to \$5 million through lending arrangements with the U.S. SBA, the U.S. Department of Commerce, and the U.S. Department of Agriculture.

The local government housing and CDC contact primarily represents LMI residents in the city of Augusta and Richmond County. The contact indicates there is not enough affordable housing in the AA for LMI and few housing options are affordable. Additionally, homelessness in Augusta is a growing issue. Hundreds of people in Augusta are living day-to-day without a home. There are over 700 people that are homeless in Augusta and that number is steadily increasing. There are few resources available in the area to help people that are homeless. A local non-profit shelter only houses about 200 people with no other options for the overflow of people needing shelter services. The contact mentioned there is a need for more grant programs and financial literacy programs for LMI people. The contact stated there is an opportunity for banks to provide loans to small businesses and more flexible loan terms and products for first time home-buyers that are purchasing homes in LMI communities.

The bank conducted research in the AA and identified community needs for affordable housing for LMI families, financial education, neighborhood revitalization/stabilization in both residential and commercial areas, small business assistance, and workforce development and job readiness to assist LMI individuals obtain employment.

Considering the information from the community contacts, bank management, and demographic and economic data, affordable housing and small business loans represent a primary credit need for the Augusta MMSA AA. Opportunity exists to originate these types of loans throughout the AA; however, it is limited in the low-income geographies as reflected by the small proportion of population, OOU's, and small businesses coupled with limited home affordability for LMI individuals. Small business loans, particularly those for start-up businesses and micro-loans are in high demand. The Augusta MMSA AA also has CD needs including economic development and volunteer support for financial literacy programs for first time homebuyers, foreclosure prevention assistance, and affordable

banking products including mortgage loans with low interest rates. There is also a need for grants to non-profits that serve LMI communities and individuals

Scope of Evaluation in Augusta MMSA AA

The rating for the Augusta MMSA AA is based on a FS evaluation of the bank's performance in the Augusta-Richmond County, GA-SC MSA. A limited portion of the bank's overall lending, investments, and services were conducted in the Augusta MMSA AA; therefore, the performance in the MMSA received less weight in determining the bank's overall CRA Rating.

CONCLUSIONS WITH RESPECT TO PERFORMANCE TESTS IN AUGUSTA MMSA AA

LENDING TEST

The bank's performance under the Lending Test in the Augusta MMSA AA is rated High Satisfactory.

Based on a FS review, including the data in the tables below and consideration of performance context discussed in the lending test, the bank's performance in the Augusta MMSA AA is good.

Lending Activity

Based on the tables below, lending levels reflect good responsiveness to the credit needs in the AA taking into account the number and dollar amount of home mortgage, small business, small farm, and CD loans originated or purchased. Lending levels were commensurate with the bank's significant capacity and market dominance.

Number of Loans					
Assessment Area	Home Mortgage	Small Business	Small Farm	Community Development	Total
Augusta MMSA	19,263	5,067	153	5	24,488

Dollar Volume of Loans (000's)					
Assessment Area	Home Mortgage	Small Business	Small Farm	Community Development	Total
Augusta MMSA	\$3,185,894	\$271,669	\$7,771	\$30,382	\$32,195,716

WFBNA ranked first in deposits with 21.7 percent market share in the AA. In overall HMDA lending, WFBNA ranked first with 10.1 percent market share. Although WFBNA's HMDA market share is considerably lower than its deposit market share, lending competition was significantly stronger, reflected by the 378 lenders, than competition for deposits, where there were only 19 depository institutions. The 2nd and 3rd top lenders in this market were South State Bank with 5.2 percent market share and Queensborough National Bank with 4.6 percent market share.

In small loans to businesses, WFBNA ranked 4th with a market share of 7.6 percent. Although WFBNA's small business market share is considerably lower than its deposit market share, lending

competition was significantly stronger, reflected by the 88 lenders, than competition for deposits, where there were only 19 depository institutions. The top three lenders were American Express with a market share of 19.1 percent, Citibank with a market share of 11.8 percent, and Georgia B&TC of Augusta with a 9.1 percent market share.

Distribution of Loans by Income Level of the Geography

The bank exhibits a good geographic distribution of loans in its AA.

Home Mortgage Loans

Refer to Table O in the “MMSA” section of appendix D for the facts and data used to evaluate the geographic distribution of the bank’s home mortgage loan originations and purchases. The bank’s overall geographic distribution of home mortgage loan originations and purchases for this evaluation is good.

- The bank’s performance in both periods, 2012-2016 and 2017-2018, for home mortgage loans in low-income geographies approximates the aggregate distribution of loans and is significantly below the proportion of OOUs in those geographies.
- The proportion of loans in moderate-income geographies substantially meets the aggregate distribution of loans and is well below the proportion of OOUs in those geographies.

Small Loans to Businesses

Refer to Table Q in the “MMSA” section of appendix D for the facts and data used to evaluate the geographic distribution of the bank’s originations and purchases of small loans to businesses. The bank’s overall geographic distribution of small loans to businesses for this evaluation is good.

- The bank’s performance in both periods, 2012-2016 and 2017-2018, for small business loans in LMI geographies substantially meets the aggregate distribution of loans in those geographies.
- The bank’s performance in both periods is below the proportion of businesses located in LMI geographies.

Distribution of Loans by Income Level of the Borrower

The bank exhibits a good distribution of loans among individuals of different income levels and businesses of different sizes.

Home Mortgage Loans

Refer to Table P in the “MMSA” section of appendix D for the facts and data used to evaluate the borrower distribution of the institution’s home mortgage loan originations and purchases. The bank’s overall borrower distribution of home mortgage loan originations and purchases for this evaluation is good.

- There are homeownership affordability hurdles in the AA especially for low-income borrowers. As noted above, the area's median housing value is 4.7 times the income of low-income borrowers indicating a limited proportion of OOU's are affordable to low-income borrowers. Despite the affordability challenges, the bank's lending in both periods, 2012-2016 and 2017-2018, to LMI borrowers substantially meets the aggregate lending.
- The bank's overall home mortgage lending to low-income borrowers is significantly below the proportion of families and lending to moderate-income borrowers is below the proportion of families.

Small Loans to Businesses

Refer to Table R in the "MMSA" section of appendix D for the facts and data used to evaluate the borrower distribution of the institution's originations and purchases of small loans to businesses. The distribution of the bank's originations and purchases of small loans to businesses by revenue category is good.

- For both 2012-2016 and 2017-2018 periods, the bank's distribution of small loans to businesses with revenues of \$1 million or less exceeds the aggregate small business lending data for businesses with revenues of \$1 million or less and is well below the percentage of small businesses located in the AA.

Community Development Lending

The institution has made an adequate level of CD loans.

The Lending Activity Tables, shown above, set forth the information and data used to evaluate the institution's level of CD lending. These tables include all CD loans, including multifamily loans that also qualify as CD loans.

The level of CD lending in the Augusta MMSA AA is adequate. WFBNA made five CD loans in its AA for a total of \$30 million, which represents over 14.7 percent of tier 1 capital. Although the bank only originated five loans during the six-year time period, the loans represented a significant amount of tier 1 capital. CD lending performance has a neutral impact on the lending test rating. All CD loans were for the primary purpose of affordable housing, which is a critical CD need in the bank's AA.

Examples of CD loans in the AA include:

- In June 2016, WFBNA provided an \$8.4 million loan for an LIHTC housing development located in Martinez, Georgia with 100 percent of the units restricted to tenants earning less than 60 percent of the area MFI.
- In August 2017, WFBNA provided a \$28 million loan for a multifamily housing development, of which \$10.1 million qualifies as CD lending. The development restricts 36 percent of the total number of units to tenants earning 80 percent or less of the area MFI. This development is located in a moderate-income census tract in Augusta, GA. The project consists of 20 efficiency units, 141 one-bedroom units, and 285 two-bedroom units with 36.1 percent of the actual rent rates below the 2017 Fair Market Rent for the area and 99.1 percent of the units are affordable to tenants earning between 36.4 and 55.8 percent of the 2017 area MFI of \$62,000.

Product Innovation and Flexibility

The institution makes limited use of innovative and/or flexible lending programs in order to serve AA credit needs. Under the *yourFirstMortgage* loan program, the bank has funded 41 loans totaling \$4.2 million to LMI homebuyers that qualified under this program. Refer to the comments in the institution Innovative or Flexible Lending Programs section of this public evaluation for additional details regarding this program.

INVESTMENT TEST

The bank's performance under the Investment Test in the Augusta MMSA AA is rated Needs to Improve.

Based on a FS review, including the data in the table below and consideration of performance context discussed in the investment test, the bank's performance in the Augusta MMSA AA is poor.

Qualified Investments										
Assessment Area	Prior Period*		Current Period		Total				Unfunded Commitments**	
	#	\$(000's)	#	\$(000's)	#	% of Total #	\$(000's)	% of Total \$	#	\$(000's)
Augusta MMSA	16	\$1,190	85	\$3,842	101	100.0	\$5,032	100.0		

* Prior Period Investments' means investments made in a previous evaluation period that are outstanding as of the examination date.

** Unfunded Commitments' means legally binding investment commitments that are tracked and recorded by the institution's financial reporting system.

The institution has a poor level of qualified CD investments and grants, but not in a leadership position, particularly those that are not routinely provided by private investors. The current and prior period investments dollar volume represents 2.4 percent of tier 1 capital allocated to the AA.

The institution exhibits adequate responsiveness to credit and community economic development needs identified in the AA, including affordable housing, community services, and revitalization/stabilization for LMI individuals and geographies. Over 86 percent of the dollar volume of the bank's current and prior period investment focused on affordable housing, which is a primary credit need in the AA. Additionally, the bank provided 74 grants totaling \$862,000 to a variety of organizations that primarily support affordable housing and community services.

The institution occasionally uses innovative and/or complex investments to support CD initiatives. CD Investments involved a complex LIHTC investment where the bank acted in a leadership role with participations from federal, state, local housing agencies, and real estate developers. Additionally, the bank purchased numerous government mortgage-backed securities for the CD Investment portfolio.

Examples of CD investments in the AA include:

- In December 2014, WFBNA invested \$37.5 million in a LIHTC fund for affordable housing development in South Carolina, of which \$1.6 million directly benefited the AA by providing 24

affordable housing units restricted to tenants earning no more than 60 percent of the area MFI. This activity is responsive to the identified need for affordable housing.

- During the evaluation period, WFBNA provided four grants totaling \$1.2 million as a part of the Small Business DCC program benefiting small businesses in the broader statewide of Georgia and South Carolina including the Augusta MMSA AA. Refer to the comments in the institution Innovative or Flexible Lending Programs section of this public evaluation for additional details regarding this program.
- During the evaluation timeframe, WFBNA provided three grants totaling \$265,000 to three local housing organizations as a part of the PMP for affordable housing in the Augusta MMSA AA. Refer to the comments in the institution Innovative or Flexible Lending Programs section of this public evaluation for additional details regarding this program.

SERVICE TEST

The institution’s performance under the Service Test in the Augusta MMSA AA is rated Low Satisfactory.

Based on a FS review, including the data in the tables below and consideration of performance context discussed in the service test, the bank’s performance in the Augusta MMSA AA is adequate.

Retail Banking Services

Service delivery systems are accessible to geographies and individuals of different income levels in the institution’s AA.

Distribution of Branch Delivery System											
Assessment Area	Deposits	Branches						Population			
	% of Rated Area Deposits in AA	# of BANK Branches	% of Rated Area Branches in AA	Location of Branches by Income of Geographies (%)				% of Population within Each Geography*			
				Low	Mod	Mid	Upp	Low	Mod	Mid	Upp
Augusta MMSA	100.0	17	100.0	0.0	29.4	23.5	47.1	6.6	27.9	37.8	27.7

* May not add up to 100 percent due to geographies with unknown tract income level and rounding

Distribution of Branch Openings/Closings						
Assessment Area	# of Branch Openings	# of Branch Closings	Net change in Location of Branches (+ or -)			
			Low	Mod	Mid	Upp
Augusta MMSA	0	4	0	0	-2	-2

As of December 31, 2018, WFBNA operates 17 branches and 48 ATMs in the Augusta MMSA AA. All branches are full-service locations. The institution’s branches include no branches in low-income geographies and five branches in moderate-income geographies. The branch distribution in low-income geographies is significantly below the percentage of the population in low-income geographies and the branch distribution in moderate-income geographies exceeds the percentage of the population in the AA.

When considering an additional three branches within close proximity to LMI geographies, the bank's distribution is near to demographics.

The institution's opening and closing of branches have not affected the accessibility of its delivery systems, particularly in LMI geographies and/or to LMI individuals. The bank closed two branches in middle-income and two branches in upper-income geographies since the last evaluation. These branch closures did not negatively impact the distribution of branches relative to the population residing in LMI geographies.

Services, including where appropriate, business hours, do not vary in a way that inconveniences the various portions of its AA, particularly LMI geographies and/or individuals. Generally, branches are open Monday through Thursday from 9:00 am to 5:00 pm and 9:00 am to 6:00 pm on Friday. Ten of 17 branches are also open on Saturdays from 9:00 to noon. All WFBNA services are available at all branches and all ADS discussed bank-wide are available in this AA.

Community Development Services

The institution provides an adequate level of CD services.

The level of CD services in the Augusta MMSA AA is adequate. Bank records show that employees provided their financial or job-specific expertise and/or technical assistance for 110 CD service activities to 42 organizations since the last evaluation, logging a total of 263 qualified hours within this AA. All of the bank's assistance were to organizations that provide community services to LMI individuals and families. The following are examples of CD services provided in this AA:

- In April 2013, a WFBNA team member provided financial education at a school where, according to the National Center for Education Statistics (NCES), the free lunch program participation rate is 86.9 percent.
- A WFBNA team member served as a board member of a nonprofit organization that provides emergency shelter, support group counseling, referral services, outreach services, budgeting skills, and legal advocacy to victims of domestic violence in the east/central Georgia counties. According to the organization's Executive Director, over 82 percent of its clients are LMI individuals as they earn less than 80 percent of the area MFI.

Multistate Metropolitan Statistical Area Rating

Charlotte-Concord, NC-SC CSA (Charlotte MMSA AA)

CRA rating for the Charlotte MMSA AA²: Outstanding

The Lending Test is rated: High Satisfactory

The Investment Test is rated: Outstanding

The Service Test is rated: Outstanding

The major factors that support this rating include:

- Excellent lending activity;
- Adequate distribution of loans by borrower profile;
- Adequate geographic distribution of loans;
- WFBNA is a leader in providing CD loans, which has a significant positive impact on the Lending Test;
- WFBNA's use of flexible products has a positive impact on the Lending Test;
- Excellent level of CD investments that are responsive to AA needs;
- Retail delivery systems are readily accessible to all portions of the AA; and
- WFBNA is a leader in providing CD services that are responsive to the needs of the bank's AA.

Description of Institution's Operations in Charlotte MMSA AA

WFBNA delineated three AAs within the Charlotte-Concord, NC-SC CSA. Refer to Appendix A for a complete description of the AA. These areas were combined, analyzed, and presented at the CSA level with an AA name of Charlotte MMSA. WFBNA has \$31.8 billion of deposits; however, a majority of the deposits are non-retail branch deposits. The non-retail branch deposits do not reflect traditional retail customer relationships, rather they are wholesale funds. These deposits do not reflect where any of WFBNA's customers are located, where they work, or where they conduct business. The adjusted deposits are \$9.9 billion of retail deposits in the AA representing 0.8 percent of adjusted deposits. The Charlotte MMSA AA represents the 18th largest rated area in terms of deposits. In the Charlotte MMSA AA, WFBNA ranked second out of 40 depository institutions with 14.7 percent market share. The top bank within the MMSA in terms of deposits is Bank of America with 73.9 percent deposit market share. WFBNA operates 88 branches and 277 ATMs within the Charlotte MMSA AA, representing 1.6 percent of the bank's branches and 2.0 percent of the bank's ATMs. In the Charlotte MMSA, the bank originated and purchased \$23.0 billion in loans, or 1.3 percent of total bank loan originations and purchases during the evaluation period. The bank's primary loan products in the Charlotte MMSA AA is home mortgage loans and small business loans.

Demographic Data

The following table provides a summary of the demographics that include housing and business information for the Charlotte MMSA AA. Table A shows that the volume of OOU's is very small in the

²This rating reflects performance within the multistate metropolitan statistical area. The statewide evaluations do not reflect performance in the parts of those states contained within the multistate metropolitan statistical area.

low-income tracts and nearly 39 percent of families in the AA are LMI. The area's median housing value in the Charlotte MMSA AA is 2.8 times the MSA median income but 3.6 times moderate- and 5.7 times low-income, indicating a limited proportion of OOU's are affordable to LMI residents. Median rents and the high percentage of families below poverty level suggest rental housing is also unaffordable for many low-income residents.

Due to rounding, totals may not equal 100.0

(*) The NA category consists of geographies that have not been assigned an income classification.

Economic Data

According to the August 2018 Moody's Analytics report, Charlotte's economic expansion is strong and steady. Healthcare, retail trade, and the public sector are providing the biggest boost to payrolls, while builders are finding it more difficult to hire. High wage jobs already account for an outsize share of payrolls in the Charlotte MMSA and the trend persists as new high paying jobs are being added at a faster clip than their mid- and low-wage counterparts. Strong demographics and rising wages are propelling housing demand, causing prices to appreciate at their fastest rate in several years. The area's economic drivers are healthcare, retail trade, and the public sector. Robust population gains and quality job growth will add fuel to an already-hot housing market as builders struggle to keep up.

Per Moody's, professional services and construction, along with other consumer-driven industries, will ensure job gains. Finance and business/professional services will remain vital to the economic success despite the recent slowdown in growth. Major area employers include Atrium Health, Wells Fargo, Bank of America, and Wal-Mart Stores. According to the U.S. BLS, the MSA unemployment rate as of August 2018 was 3.8 percent, down considerably from 9.3 percent at the beginning of the evaluation period. The MSA unemployment rate was slightly higher than the State of South Carolina at 3.7 percent and slightly lower than the State of North Carolina at 4.0 percent.

Community Contact

The analysis takes into consideration comments provided by two community contacts that serve the bank's Charlotte MMSA AA. One community contact is a community-based development agency and one is a nonprofit affordable housing agency.

The affordable housing agency contact serves various parts of the AA, but mainly the city of Charlotte and Mecklenburg County. The contact indicated that affordable housing is a significant need in the AA. According to the community contact, the Charlotte area has been growing rapidly for the past few years, driven mostly by the banking industry as well as a strong energy base (Duke Energy), government, and universities. The economy is strong for those at the high end of the income range (\$75,000 and up), driving the increase in high end restaurants, shopping, luxury housing, etc. The population is approaching 1 million in the city and 2 million in the region. There is a strong millennial population and creative class which continues to draw people to the area. Many people come to the area without jobs, attracted by the lower cost of living than in other parts of the country and the draw of jobs in the banking industry.

The community contact indicates that the largest struggle in the Charlotte area has been the challenge of upward mobility. The area has been experiencing strong growth in the economy and in the luxury housing market but jobs and affordable housing for LMI remain a challenge. More and more of the lower rent housing keeps getting torn down and replaced with luxury projects, creating greater disparity. Affordable housing is becoming scarcer and more expensive, especially due to rising construction costs, rising interest rates, rising land costs, and the elimination of local tax credits. Average rents have increased from \$800 a month to \$1,050. Transportation remains an issue, although that is changing with the addition of a new light rail to the area, as well as Uber, which fills the gaps.

The community-based development contact serves the Dorchester county AA in South Carolina, including Summerville, Ridgeville, St. George, Reevesville, Harleystown, and North Charleston. The contact indicates that Dorchester County is growing at a 5 percent rate and the county population has doubled in the last 15 years. No major employers have left the area in the most recent years and in 2016, there were 500 new manufacturing jobs added and \$275 million in investments made in the area. In 2015, there were 600 new manufacturing jobs added with \$20 million in investments made in the area.

According to the contact, the main opportunity for credit related projects is with speculative financing for buildings 10,000 sq./ft. and up. The tri-county area has a lack of financing available for these types of speculative industrial and manufacturing buildings. However, there have been new commercial developments in the county as well as many new homes being built in the Southside and Summers Corner area. Additionally, the Oakbrook area, which was an older part of town, is in the process of being rehabilitated.

The bank conducted research in the AA and identified community needs for affordable housing for low-income families, financial education for the unbanked and underbanked, services to homeless veterans and families, and workforce development/job placement.

Considering the information from the community contacts and bank management as well as demographic and economic data, affordable housing and small business loans represent a primary credit need for the Charlotte MMSA_AA. Opportunity exists to originate these types of loans throughout the

AA; however, it is limited in the low-income geographies as reflected by the small proportion of OOU's and small businesses coupled with limited home affordability for LMI individuals. The AA also has CD needs including affordable housing and economic development, including job training and financial literacy.

Scope of Evaluation in Charlotte MMSA AA

The rating for the Charlotte MMSA AA is based on a FS evaluation of the bank's performance in the Charlotte-Concord, NC-SC CSA. A limited portion of the bank's overall lending, investments, and services were conducted in the Charlotte MMSA AA; therefore, the performance in the AA received less weight in determining the bank's overall CRA Rating.

CONCLUSIONS WITH RESPECT TO PERFORMANCE TESTS IN CHARLOTTE MMSA AA

LENDING TEST

The bank's performance under the Lending Test in the Charlotte MMSA AA is rated High Satisfactory.

Based on a FS review, including the data in the tables below and consideration of performance context discussed in the lending test, the bank's performance in the Charlotte MMSA AA is good.

Lending Activity

Based on the tables below, lending levels reflect excellent responsiveness to the credit needs in the AA taking into account the number and dollar amount of home mortgage, small business, small farm, and CD loans originated or purchased relative to its capacity based on deposits, competition, and market presence.

Number of Loans					
Assessment Area	Home Mortgage	Small Business	Small Farm	Community Development	Total
Charlotte MMSA	92,965	36,814	389	84	130,252

Dollar Volume of Loans (000's)					
Assessment Area	Home Mortgage	Small Business	Small Farm	Community Development	Total
Charlotte MMSA	\$20,884,803	\$2,128,598	\$15,631	\$254,432	\$23,283,464

WFBNA ranked second in deposits with 14.7 percent market share in the AA including non-retail deposits. In overall HMDA lending, WFBNA ranked first with 10.6 percent market share. There is strong competition as reflected by the 684 lenders and 40 depository institutions in the AA. The number two lender in the market was Movement Mortgage with a 6.3 percent market share.

In small loans to businesses, WFBNA ranked third with a market share of 9.8 percent. The top two lenders were American Express with a market share of 17.2 percent and Bank of America with a market share of 10.9 percent.

Distribution of Loans by Income Level of the Geography

The bank exhibits adequate geographic distribution of loans in its AA.

Home Mortgage Loans

Refer to Table O in the “MMSA” section of appendix D for the facts and data used to evaluate the geographic distribution of the bank’s home mortgage loan originations and purchases. The bank’s overall geographic distribution of home mortgage loan originations and purchases for this evaluation is adequate.

- The bank’s performance in both periods, 2012-2016 and 2017-2018, for home mortgage loans in LMI geographies is below the aggregate distribution of loans in those geographies.
- The proportion of loans in LMI geographies is well below the proportion of OOUs in those geographies.

Small Loans to Businesses

Refer to Table Q in the “MMSA” section of appendix D for the facts and data used to evaluate the geographic distribution of the bank’s originations and purchases of small loans to businesses. The bank’s overall geographic distribution of small loans to businesses for this evaluation is excellent.

- For 2012-2016, the proportion of the bank’s small business loans in low-income geographies exceeds both the aggregate distribution of loans and the proportion of businesses located in those geographies.
- The proportion of loans in moderate-income geographies substantially meets the aggregate distribution of loans and is below the proportion of businesses located in those geographies.
- The bank’s small business lending in 2017-2018 is slightly below the performance in 2012-2016.

Distribution of Loans by Income Level of the Borrower

The bank exhibits an adequate distribution of loans among individuals of different income levels and businesses of different sizes.

Home Mortgage Loans

Refer to Table P in the “MMSA” section of appendix D for the facts and data used to evaluate the borrower distribution of the institution’s home mortgage loan originations and purchases. The bank’s overall borrower distribution of home mortgage loan originations and purchases for this evaluation is adequate.

- The Charlotte MMSA AA has homeownership affordability hurdles especially for LMI borrowers. As noted above, the area’s median housing value is 5.7 times the income of low-

income borrowers and 3.6 times the income of moderate-income borrowers indicating a limited proportion of OOUs are affordable to LMI individuals. Despite the affordability challenges, the bank's overall home mortgage lending to LMI borrowers in 2012-2016 substantially meets the aggregate distribution of loans to LMI borrowers.

- The bank's performance for lending to low-income borrowers is significantly below the proportion of families and lending to moderate-income borrowers is below the proportion of families.
- The bank's home mortgage lending in 2017-2018 is significantly below the performance in 2012-2016 and was a factor in the downgrade in the overall rating from good to adequate.

Small Loans to Businesses

Refer to Table R in the "MMSA" section of appendix D for the facts and data used to evaluate the borrower distribution of the institution's originations and purchases of small loans to businesses. The distribution of the bank's originations and purchases of small loans to businesses by revenue is good.

- For both 2012-2016 and 2017-2018 periods, the bank's distribution of small loans to businesses with revenues of \$1 million or less exceeds the aggregate small business lending data for businesses with revenues of \$1 million or less and is below the percentage of small businesses located in the AA.

Community Development Lending

The institution is a leader in making CD loans, when considering the significant level of non-retail branch deposits.

The Lending Activity Tables, shown above, set forth the information and data used to evaluate the institution's level of CD lending. These tables include all CD loans, including multifamily loans that also qualify as CD loans.

The level of CD lending in the Charlotte MMSA AA is excellent. WFBNA made 84 CD loans in its AA for a total of \$254.4 million, which represents 22.9 percent of adjusted tier 1 capital. CD lending performance has a significant positive impact on the lending test rating. The institution makes significant use of innovative and/or complex CD loans and involved many complex projects where the bank often acted in a leadership role. The majority (88.9 percent) of these loans (47 loans totaling \$226.3 million) were for the primary purpose of affordable housing, which is a critical CD need in the bank's AA. Additionally, the bank extended 34 loans totaling \$16.8 million for the primary purpose of community services, two loans totaling \$2 million for the primary purpose of economic development, and one loan totaling \$9.2 million for revitalization and stabilization of the AA.

Examples of CD loans in the AA include:

- In March 2014, WFBNA renewed a \$3 million working capital line of credit to a nonprofit organization located in Charlotte, NC with a primary mission of rescuing women and children from abuse. In 1945, the organization transitioned to serving children with emotional and behavioral issues. They serve approximately 7,000 children annually between the ages of 5-18 with, or at risk for, serious emotional disturbances. According to the organization's VP of

Finance, it is estimated that 85 percent of the clients they serve are considered to be LMI individuals as they earn less than 80 percent of the area MFI.

- In March 2015, WFBNA provided a \$41.8 million loan for the acquisition of ten LIHTC housing developments. The loan amount reported of \$1.7 million is reflective of the proportional share that is associated with this development. This LIHTC development is located in a moderate-income census tract in Charlotte, North Carolina with 98 percent of the units restricted to tenants earning 60 percent of the area MFI.
- In September 2018, WFBNA refinanced a \$33.8 million loan for an affordable housing development located in a moderate-income census tract in Charlotte. The development consists of 188 one-bedroom units and 268 two-bedroom units with 96.1 percent of the actual rent rates below the 2018 Fair Market Rent for the area and 99.4 percent of the units affordable to tenants earning between 34 and 75 percent of the 2018 area MFI of \$71,300.

Product Innovation and Flexibility

The institution makes extensive use of innovative and/or flexible lending programs in order to serve AA credit needs. The bank held NeighborhoodLIFT events in the Charlotte MMSA AA in October 2013 and November 2018, with more than 500 potential homebuyers attending the events. Of the 500 in attendance, WFBNA originated 235 mortgage loans totaling \$29 million. Under the *yourFirstMortgage* loan program, the bank has funded 264 loans totaling \$36.6 million to LMI homebuyers that qualified under this program. Refer to the comments in the institution Innovative or Flexible Lending Programs section of this performance evaluation for additional details regarding these programs.

INVESTMENT TEST

The bank’s performance under the Investment Test in the Charlotte MMSA AA is rated Outstanding.

Based on a FS review, including the data in the table below and consideration of performance context discussed in the investment test, the bank’s performance in the Charlotte MMSA AA is excellent.

Qualified Investments										
Assessment Area	Prior Period*		Current Period		Total				Unfunded Commitments**	
	#	\$(000’s)	#	\$(000’s)	#	% of Total #	\$(000’s)	% of Total \$	#	\$(000’s)
Charlotte MMSA	28	\$24,768	745	\$91,667	773	100.0	\$116,435	100.0		

* Prior Period Investments' means investments made in a previous evaluation period that are outstanding as of the examination date.

** Unfunded Commitments' means legally binding investment commitments that are tracked and recorded by the institution's financial reporting system.

The institution has an excellent level of qualified CD investments and grants, often in a leadership position, particularly those that are not routinely provided by private investors. The current and prior period investments dollar volume represents 10.5 percent of adjusted tier 1 capital allocated to the AA.

The institution exhibits excellent responsiveness to credit and community economic development needs identified in the AA, including affordable housing, community services, economic development, and revitalization/stabilization for LMI individuals and geographies. Over 83 percent of the dollar volume of the bank’s current and prior period investment focused on affordable housing, which is a primary

credit need in the AA. Additionally, the bank provided 650 grants totaling \$35.5 million to a variety of organizations that primarily support affordable housing, community services, economic development, and revitalization/stabilization for LMI individuals and geographies.

The institution makes significant uses innovative and/or complex investments to support CD initiatives. CD Investments involved many complex LIHTC projects where the bank acted in a leadership role with participations from federal, state, local housing agencies, and real estate developers. Additionally, the bank purchased numerous government mortgage-backed securities for the CD Investment portfolio.

Examples of CD investments in the AA include:

- In November 2016, WFBNA provided a \$9.2 million LIHTC investment for the construction of an 81-unit apartment complex located in Charlotte, North Carolina, with 100 percent of the units restricted to tenants earning between 30 and 60 percent of the area MFI. All of the units have rental assistance through HUD's Rental Assistance Demonstration (RAD) program. HUD's RAD program is HUD's flagship program for the recapitalization of the public housing. WFBNA demonstrated multi-faceted support by providing both the construction loan (\$4.5 million) and equity investment to support this affordable housing development. WFBNA demonstrates active involvement with this organization as evidenced by its long-term relationship that dates back to 2009. This activity is highly complex because it involves HUD's RAD program and additional financing from the City of Charlotte.
- In October 2013, WFBNA provided a \$5.5 million grant to a housing partnership organization as part of the NeighborhoodLIFT Down Payment Assistance program. This organization promotes reinvestment in urban, suburban, and rural communities by local financial institutions working cooperatively with residents and local government. It provides funds to 235 organizations, monitors their progress, and provides financial support, technical assistance, and training for community-based revitalization efforts. Refer to the comments in the institution Innovative or Flexible Lending Programs section of this performance evaluation for additional details regarding this program.
- During the evaluation period, WFBNA provided two grants totaling \$265,000 to two housing organizations as a part of the PMP for affordable housing in the Charlotte MMSA AA. Refer to the comments in the institution Community Development Initiatives section of this public evaluation for additional details regarding this program.

SERVICE TEST

The institution's performance under the Service Test in the Charlotte MMSA AA is rated Outstanding.

Based on a FS review, including the data in the tables below and consideration of performance context discussed in the service test, the bank's performance in the Charlotte MMSA AA is excellent.

Retail Banking Services

Service delivery systems are readily accessible to geographies and individuals of different income levels in the institution's AA.

Distribution of Branch Delivery System											
Assessment Area	Deposits	Branches						Population			
	% of Rated Area Deposits in AA	# of BANK Branches	% of Rated Area Branches in AA	Location of Branches by Income of Geographies (%) *				% of Population within Each Geography *			
				Low	Mod	Mid	Upp	Low	Mod	Mid	Upp
Charlotte MMSA	100.0	88	100.0	12.5	25.0	22.7	37.5	7.0	25.5	36.3	30.9

* May not add up to 100 percent due to geographies with unknown tract income level and rounding. Population in census tracts with income unknown represent 0.3 percent and the bank's branches in these tracts represent 2.3 percent of total branches in the AA.

Distribution of Branch Openings/Closings								
Assessment Area	# of Branch Openings	# of Branch Closings	Net change in Location of Branches (+ or -)					
			Low	Mod	Mid	Upper	NA	
Charlotte MMSA	1	10	0	-4	-3	-2	0	

As of December 31, 2018, WFBNA operates 88 branches and 277 ATMs in the Charlotte MMSA AA. Of these branches, 82 are full-service locations and six are limited-service branches. The institution's branches include 11 branches in low-income geographies and 22 branches in moderate-income geographies. The branch distribution in low-income geographies exceeds the percentage of the population in low-income geographies and branch distribution in moderate-income geographies approximates the percentage of the population in moderate-income geographies in the AA. When considering an additional ten branches within close proximity to LMI geographies, the bank's distribution further exceeds demographics.

The institution's opening and closing of branches have not affected the accessibility of its delivery systems, particularly in LMI geographies and/or to LMI individuals. The bank opened one branch in this AA. The bank closed four branches in moderate-income, three branches in middle-income, and three branches in upper-income geographies. The closure of branches in moderate-income geographies was to consolidate with other branches nearby and did not negatively impact the distribution of branches relative to the population residing in those geographies. The bank still maintains 33 active branches or 38 percent within LMI geographies.

Services, including where appropriate, business hours, do not vary in a way that inconveniences the various portions of its AA, particularly LMI geographies and/or individuals. While there are slight variations in opening and closing times, most branches are open Monday through Friday from 9:00 am to 5:00 pm and 9:00 am to 6:00 pm on Friday. Thirty branches are also open on Saturdays from 9:00 am to 1:00 pm. More than half of the branches open on Saturdays are located in LMI geographies. All WFBNA services are available at all branches and all ADS discussed bank-wide are available in this AA.

Community Development Services

The institution is a leader in providing CD services.

The level of CD services in the Charlotte MMSA AA is excellent. Bank records show that employees provided their financial or job-specific expertise and/or technical assistance for 616 CD service activities to 143 organizations since the last evaluation, logging a total of 2,176 qualified hours within this AA. A majority (92 percent) of the bank's assistance was to organizations that provide community services to LMI individuals and families. Other activities targeted affordable housing (6 percent) and revitalization or stabilization (2 percent). The bank's financial assistance provided was responsive to the identified needs in the AA particularly affordable housing. The following are examples of CD services provided in this AA:

- Four WFBNA team members provided 123 hours of tax preparation through the VITA program. Refer to the comments in the institution Innovative or Flexible Retail Service Programs section of this public evaluation for additional details regarding this program.
- Four WFBNA team member provided 36 hours of Board service to two local affiliates of a self-help affordable housing developer and one team member provided eight hours of home-buyer education. This organization provides homeownership opportunities by building homes for and with eligible LMI individuals.

Multistate Metropolitan Statistical Area Rating

Chicago-Naperville, IL-IN CSA (Chicago MMSA AA)

CRA rating for the Chicago MMSA AA³: Satisfactory

The Lending Test is rated: Outstanding

The Investment Test is rated: Outstanding

The Service Test is rated: Needs to Improve

The major factors that support this rating include:

- Excellent level of lending activity;
- Good geographic distribution of loans;
- Good borrower distribution of loans;
- WFBNA is a leader in providing CD loans, which has a significant positive impact on the Lending Test.
- WFBNA's use of flexible products has a positive impact on the Lending Test;
- Excellent level of CD investments that are responsive to AA needs;
- Retail delivery systems are unreasonably inaccessible to portions of the AA; and
- WFBNA is a leader in providing CD services that are responsive to the needs of the bank's AA.

Description of Institution's Operations in Chicago MMSA AA

WFBNA delineated two AAs within the Chicago-Naperville, IL-IN-WI CSA. Refer to Appendix A for a complete description of the AA. These areas were combined, analyzed, and presented at the CSA level with an AA name of Chicago MMSA. WFBNA has \$8.2 billion of deposits in the Chicago MMSA AA, representing 0.6 percent of adjusted deposits. The Chicago MMSA AA represents the 21th largest rated area by deposits. In the Chicago MMSA AA, WFBNA ranked 12th out of 175 depository institutions with 2.2 percent market share. The top three banks within the MMSA in terms of deposits were JPMorgan Chase Bank with 22.3 percent, BMO Harris Bank with 12.7 percent, and Bank of America with 8.9 percent. All three banks have substantially larger branching networks. WFBNA operates only 11 branches and 10 ATMs within the Chicago MMSA AA, representing 0.2 percent of the bank's branches and 0.08 percent of the bank's ATMs. In comparison to the low percentage of deposits and branching network, the bank originated and purchased approximately \$51 billion in loans, or 2.7 percent of total bank loan originations and purchases during the evaluation period. The bank's primary loan products in the Chicago MMSA AA is home mortgage loans and small loans to businesses.

Demographic Data

The following table provides a summary of the demographics that include housing and business information for the Chicago MMSA AA. Table A indicates that the volume of OOU's is very small in low-income CTs and over 38 percent of families in the AA are LMI. The area's median housing value in the Chicago MMSA AA is 3.3 times the MSA median income but 4.2 times moderate-, and 6.7 times

³This rating reflects performance within the multistate metropolitan statistical area. The statewide evaluations do not reflect performance in the parts of those states contained within the multistate metropolitan statistical area.

low-income, indicating a limited proportion of OOU's are affordable to LMI individuals. Median rents and the high percentage of families below poverty level suggest rental housing is also unaffordable for many low-income residents.

Economic Data

Chicago-Naperville-Elgin, IL-WI MSA

According to the May 2018 Moody's Analytics report, the Chicago economy is maturing but underperforming the nation and other major metro areas and divisions. Slower job growth partly reflects a tighter labor market with job creation ahead of labor force gains and wage growth accelerating. The City of Chicago welcomed a record 55 million visitors in 2017. Vacationers and business travelers are flocking to the area's hotels, restaurants, recreation facilities, and entertainment venues, and tourism offerings are expanding on multiple fronts. The city is popular with tourists and the downtown job and real estate markets are flourishing but beyond the city center, the secular decline of manufacturing and quality of life issues are eroding the population base.

The apartment building boom has spread beyond Chicago's urban core to the suburbs while the single-family market is more of a mixed story. Sales of existing homes are rising, but new residential construction is struggling to make headway. With soft demand for new homes, builders are putting up just one-quarter as many units as they were before the recession and construction growth is uneven.

The major economic drivers for the MMSA are professional and business services, education and health services, and government. The largest employers in the Chicago MMSA includes Advocate Health Care System, Northwestern Memorial Healthcare, and University of Chicago. According to the U.S BLS, the unemployment rate for the second quarter of 2018 was 4.6 percent and has decreased significantly from 9.3 percent at the beginning of the evaluation period. The unemployment rate in the AA was slightly higher than the overall States of Illinois (3.7 percent).

Michigan City-La Porte, IN MSA

According to the October 2018 Moody's Analytics report, Michigan City MSA is in a protracted slump and is still in a recession having never recovered from the Great Recession. Payroll employment is 2 percent below where it began the decade and is the lowest since the mid-1980. The oversize factory sector has been a key source of job creation in Michigan City. Together, primary metals, industrial machinery and food processing account for 60 percent of factory jobs. Local government also faces a tough road ahead as the loss of residents undermines tax revenue.

The outlook for the housing market is bleak. Sales of existing homes have increased but at the level below the national and state averages. The major economic drivers for the MSA are government, retail trade, and education and health services. The largest employers in the Michigan City MSA includes La Porte Regional Health Systems, Blue Chip Hotel & Casino, and St. Anthony Memorial Health Center. According to the U.S. BLS, the unemployment rate for the fourth quarter of 2018 was 4.2 percent and has decreased significantly from 9.8 percent at the beginning of the evaluation period. The unemployment rate in the AA was slightly higher than the overall State of Indiana (3.2 percent).

Community Contact

The analysis takes into consideration comments provided by 14 community contacts that serve the bank's Chicago MMSA AA. Five of the community contacts represent affordable housing and fair housing policies in LMI areas. Three of the community contacts represent Economic Development Corporations in the AA. One community contact is a non-profit Community Development Financial Institution (CDFI). The remaining five community contacts provide a vast array of community development services targeted to LMI people and communities in the AA.

The long-standing source of living wage employment in the six county Chicago region, especially for people without college degrees and in some cases, without high school diplomas, was once dominated by manufacturing industries with several located in south suburban Cook County and in the City of Chicago. These types of industries have largely disappeared over the decades with few exceptions. Declining manufacturing jobs combined with mortgage crisis and loss of affordable housing due to gentrification has led to the displacement of LMI populations.

The CDFI contact serves eight locations in the AA where it has offices; the city of Chicago, South Suburban Cook County, and Elgin, IL. The community contact stated that the lending arm of the organization holds a disproportionate share of the single-family mortgage market in LMI communities. The interviewee cited the example of the Roseland neighborhood on the south side of Chicago, where in the past year the non-profit originated 15 of 35 home mortgages made in the community. The community contact stated that a nonprofit CDFI should not have a 43 percent market share of mortgages in the AA and indicates that banks are not lending in the area.

One contact stated that based on nationwide CRA data, small business lending by conventional banks has declined in the AA since the 2008-09 recession, especially for loans of less than \$100K.

All five housing agency contacts serving various part of the AA noted a significant need for affordable housing. Community contacts noted that affordable housing remains the most difficult challenge for LMI families in the AA. Many have pretty decent credit scores but their income does not qualify them for a mortgage. The cost of single-family housing is high and LMI people have difficulty saving for a down payment and closing costs. What housing they do qualify for is in such poor repair that the scope of repairs makes them unaffordable, yet the communities near concentrations of low-wage jobs have a good mix of homes. Home values in LMI areas in the city of Chicago and in the south suburbs continue to lag, and comparable sales can be difficult to find as many sales in LMI neighborhoods continue to be for cash. One affordable housing community contact noted real estate developers are purchasing multi-family buildings in the assessment area and increasing rents making housing unaffordable to LMI people that live there. This has had a negative effect on LMI families and communities resulting in the displacement of LMI people from their communities and some end up in homeless shelters. The contact went on to state that banks should not receive CRA credit for financing multifamily buildings in LMI communities. The lack of ready, conventional financing by banks for home purchases suppresses home sales and depresses real estate values.

Considering the information from the community contacts, bank management, and demographic and economic data, affordable housing and small business loans represent the primary credit needs for the Chicago MMSA AA. Opportunity exists to originate these types of loans throughout the AA; however, it is limited in the low-income geographies as reflected by the small proportion of OOU's and small businesses coupled with limited home affordability for LMI individuals.

Scope of Evaluation in Chicago MMSA AA

The rating for the Chicago MMSA AA is based on a FS evaluation of the bank's performance in the Chicago-Naperville, IL-IN-WI CSA. A limited portion of the bank's overall lending, investments, and services were conducted in the Chicago CSA AA; therefore, the performance in the MMSA received less weight in determining the bank's overall CRA Rating.

CONCLUSIONS WITH RESPECT TO PERFORMANCE TESTS IN CHICAGO MMSA AA

LENDING TEST

The bank's performance under the Lending Test in the Chicago MMSA AA is rated Outstanding.

Based on a FS review, including the data in the tables below and consideration of performance context discussed in the lending test, the bank's performance in the Chicago MMSA AA is excellent.

Lending Activity

Based on the tables below, lending levels reflect excellent responsiveness to the credit needs in the AA taking into account the number and dollar amount of home mortgage, small business, small farm, and

CD loans originated or purchased relative to its capacity based on deposits, competition, and market presence.

Number of Loans					
Assessment Area	Home Mortgage	Small Business	Small Farm	Community Development	Total
Chicago MMSA	207,607	21,740	227	47	229,621

Dollar Volume of Loans (000's)					
Assessment Area	Home Mortgage	Small Business	Small Farm	Community Development	Total
Chicago MMSA	\$49,713,871	\$1,518,459	\$31,122	\$145,604	\$51,409,056

WFBNA ranked 12th in deposits with 2.2 percent market share in the AA. In overall HMDA lending, WFBNA ranked second with 7.8 percent market share. There is strong competition as reflected by the 870 lenders and 175 depository institutions in the AA. The top lender in this market was JPMorgan Chase Bank with a 10.2 percent market share.

In small loans to businesses, WFBNA ranked 15th with a market share of 1.2 percent. The top three lenders were JPMorgan Chase Bank with a market share of 20.0 percent, American Express with a market share of 18.1 percent, and Citibank with a market share of 9.3 percent.

Distribution of Loans by Income Level of the Geography

The bank exhibits a good geographic distribution of loans in its AA.

Home Mortgage Loans

Refer to Table O in the “MMSA” section of appendix D for the facts and data used to evaluate the geographic distribution of the bank’s home mortgage loan originations and purchases. The bank’s overall geographic distribution of home mortgage loan originations and purchases for this evaluation is good.

- For 2012-2016, the proportion of home mortgage loans in LMI geographies substantially meets the aggregate distribution of loans in those geographies.
- The proportion of loans in low-income geographies is well below the proportion of OOUs and in moderate-income geographies is below the proportion of OOUs in those geographies.
- Based on the bank’s performance in 2017-2018, the bank’s home mortgage lending is slightly below the combined performance in 2012-2016.

Small Loans to Businesses

Refer to Table Q in the “MMSA” section of appendix D for the facts and data used to evaluate the geographic distribution of the bank’s originations and purchases of small loans to businesses. The bank’s overall geographic distribution of small loans to businesses for this evaluation is excellent.

- For 2012-2016, the proportion of the bank’s small business loans in LMI geographies exceeds the aggregate distribution of loans in those geographies.
- The proportion of loans in low-income geographies is below the proportion of businesses and in moderate-income geographies is near to the proportion of businesses located in those geographies.
- Based on the bank’s small business lending in 2017-2018, the bank’s small business lending is slightly below the combined performance in 2012-2016.

Distribution of Loans by Income Level of the Borrower

The bank exhibits a good distribution of loans among individuals of different income levels and businesses of different sizes.

Home Mortgage Loans

Refer to Table P in the “MMSA” section of appendix D for the facts and data used to evaluate the borrower distribution of the institution’s home mortgage loan originations and purchases. The bank’s overall borrower’s distribution of home mortgage loan originations and purchases for this evaluation is good.

- There are homeownership affordability hurdles in the AA especially for LMI borrowers. As noted above, the area’s median housing value is 6.7 times the income of low-income borrowers and 4.2 times the income of moderate-income borrowers indicating a limited proportion of OOU’s are affordable to LMI individuals. Despite the affordability challenges, the bank’s overall home mortgage lending in 2012-2016 period to LMI borrowers exceeds the aggregate lending.
- The bank’s overall home mortgage lending to low-income borrowers is significantly below the proportion of families and lending to moderate-income borrowers is below the proportion of families.
- Based on the bank’s home mortgage lending in 2017-2018, the bank’s home mortgage lending is slightly less than the combined performance in 2012-2016.

Small Loans to Businesses

Refer to Table in the “MMSA” section of appendix D for the facts and data used to evaluate the borrower distribution of the institution’s originations and purchases of small loans to businesses. The distribution of the bank’s originations and purchases of small loans to businesses by revenue is good.

- For 2012-2016 and 2017-2018 time periods, the bank’s distribution of small loans to businesses with revenues of \$1 million or less exceeds the aggregate small business lending data for businesses with revenues of \$1 million or less and is well below the percentage of small businesses located in the AA.

Community Development Lending

The institution is a leader in making CD loans.

The Lending Activity Tables, shown above, set forth the information and data used to evaluate the institution's level of CD lending. These tables include all CD loans, including multifamily loans that also qualify as CD loans.

The level of CD lending in the Chicago MMSA AA is excellent. WFBNA made 47 CD loans in its AA for a total of \$145 million, which represents over 15.7 percent of tier 1 capital. CD lending performance has a significantly positive impact on the lending test rating. The institution makes significant use of innovative and/or complex CD loans and involved many complex projects where the bank often acted in a leadership role. Thirty-nine loans totaling \$128 million (83 percent) were for the primary purpose of affordable housing. Affordable housing is a critical CD need in the bank's Chicago CSA AA. Additionally, the bank extended seven CD loans for \$6.4 million for the primary purpose of economic development as well as one CD loan totaling \$10 million for revitalization and stabilization of the AA.

Examples of CD loans in the AA include:

- In March 2015, WFBNA provided a \$25 million line of credit to a Tax Credit Investment Fund of which, \$1.5 million directly benefits the AA by financing an affordable housing development located in Chicago, IL. The loan proceeds were used to bridge the gap between the receipt of capital contributions from investors and the payment of equity investments to operating partnerships that own LIHTC projects.
- In August 2018, WFBNA provided a \$28 million loan for an affordable housing development located in Chicago, Illinois. The development consists of 32 efficiency units, 110 one-bedroom units, and 10 two-bedroom units with 100 percent of the total units restricted to tenants earning no more than 60 percent of area MFI. Rent are supported by a 20-year Section 8 HAP Contract that will go into effect at loan closing.
- In June 2018, WFBNA provided a \$10 million line of credit for an organization that helps communities thrive by creating opportunities for low-income communities and people with disabilities. The organization is a mission-driven lender, real estate consultant, and developer and is the largest nonprofit CDFI in the Midwest. Funds were used to provide financing for nonprofit facilities in Illinois, including the Chicago MMSA AA. According to its website, as of March 2016, the purpose of the line of credit reflects the Community Development purpose of revitalization/stabilization.
- During the evaluation period, WFBNA provided three grants totaling \$775,000 as a part of the Small Business DCC program benefiting small businesses in the Chicago MMSA AA. Refer to the comments in the institution Innovative or Flexible Lending Programs section of this public evaluation for additional details regarding this program.

Product Innovation and Flexibility

The institution makes extensive use of innovative and/or flexible lending practices in order to serve AA credit needs. The bank held a NeighborhoodLIFT event in the Chicago MMSA AA in August 2018 with more than 690 potential homebuyers attending the event and more than 190 homebuyers utilizing the down payment assistance (\$15,000) to purchase a home. Of the 190, WFBNA originated 78 home mortgage loans totaling \$11 million. Under the *yourFirstMortgage* loan program the bank has funded 266 loans totaling \$35 million to LMI homebuyers that qualified under this program.

Refer to the comments in the institution Innovative or Flexible Lending Practices section of this performance evaluation for additional details regarding these programs.

INVESTMENT TEST

The bank's performance under the Investment Test in the Chicago MMSA AA is rated Outstanding.

Based on a FS review, including the data in the table below and consideration of performance context discussed in the investment test, the bank's performance in the Chicago MMSA AA is excellent.

Qualified Investments										
Assessment Area	Prior Period*		Current Period		Total				Unfunded Commitments**	
	#	\$(000's)	#	\$(000's)	#	% of Total #	\$(000's)	% of Total \$	#	\$(000's)
Chicago MMSA	3	\$14,856	376	\$294,474	379	100.0	\$309,330	100.0		

* Prior Period Investments' means investments made in a previous evaluation period that are outstanding as of the examination date.

** Unfunded Commitments' means legally binding investment commitments that are tracked and recorded by the institution's financial reporting system.

The institution has an excellent level of qualified CD investments and grants, often in a leadership position, particularly those that are not routinely provided by private investors. The current and prior period investments dollar volume represents 33.4 percent of adjusted tier 1 capital allocated to the AA.

The institution exhibits excellent responsiveness to credit and community economic development needs identified in the AA, including affordable housing, community services, economic development, and revitalization/stabilization for LMI individuals and geographies. Over 98 percent of the dollar volume of the bank's current and prior period investment focused on affordable housing which is a primary credit need in the AA. Additionally, the bank provided 343 grants totaling \$15.5 million to a variety of organizations that primarily support affordable housing, community services, economic development, and revitalization/stabilization for LMI individuals and geographies.

The institution makes significant uses of innovative and/or complex investments to support CD initiatives. CD Investments involved many complex LIHTC projects where the bank often acted in a leadership role with participations from federal, state, local housing agencies, and real estate developers. Additionally, the bank purchased numerous government mortgage-backed securities for the CD Investment portfolio.

Examples of CD investments in the AA include:

- In September 2013, WFBNA invested \$65.9 million in a National Community Investment corporation of which \$15.9 million was allocated to a development located in Chicago, Illinois that provides 75 affordable housing units restricted to tenants earning no more than 60 percent of the area MFI. This corporation is a nonprofit Chicago-based affiliate of the Local Initiatives Support Corporation and one of the nation's leading LIHTC syndicators of LIHTC. Since inception, they have played an integral role in creating affordable housing options, revitalizing communities, and strengthening local economies.
- In April 2015, WFBNA provided an \$83 million investment for the acquisition and rehabilitation of a 628-unit LIHTC affordable housing development. This development is located in a low-income census tract in the Old Town section of Chicago, Illinois, and is comprised of 10 five-

story buildings covering an entire city block. The property was originally built in 1929 and is listed on the National Register of Historic Places, which qualifies this project for Historic Tax Credits. The development is designated for families earning up to 80 percent of the area MFI.

- WFBNA provided several grants totaling \$775,000 through the Small Business DCC Program which takes an innovative approach to address challenges diverse small business owners face when starting or growing their business. The grants were made as a part of the DCC program benefiting small businesses in Chicago. Refer to the comments in the institution Innovative or Flexible Lending Practices section of this public evaluation for additional details regarding this program.

SERVICE TEST

The institution's performance under the Service Test in the Chicago MMSA AA is rated Needs to Improve.

Based on a FS review, including the data in the tables below and consideration of performance context discussed in the service test, the bank's performance in the Chicago MMSA AA is poor.

Retail Banking Services

Service delivery systems are unreasonably inaccessible to portions of the AA, particularly LMI geographies and/or individuals. The tables below are shown as of December 31, 2018 to be consistent with other rated areas. On November 30, 2018, the bank sold its only branch in a low-income geography to Flagstar Bank. The branch sale was part of a larger transaction where Flagstar Bank purchased 52 branches in Illinois, Indiana, Michigan, Ohio, and Wisconsin. The branch was re-branded as Flagstar branches upon closing of the transaction. Flagstar intends to keep all branches and retain all employees. Since the branch was in operation during the majority of the evaluation time period the branch is evaluated and included in the analysis below.

Distribution of Branch Delivery System											
Assessment Area	Deposits	Branches						Population			
	% of Rated Area Deposits in AA	# of BANK Branches	% of Rated Area Branches in AA	Location of Branches by Income of Geographies (%)				% of Population within Each Geography *			
				Low	Mod	Mid	Upp	Low	Mod	Mid	Upp
Chicago MMSA	100.0	11	100.0	0.0	0.0	36.4	63.6	10.0	23.5	31.6	34.6

* May not add up to 100 percent due to geographies with unknown tract income level and rounding. Population in census tracts with income unknown represent 0.3 percent in the AA

Distribution of Branch Openings/Closings							
Assessment Area	# of Branch Openings	# of Branch Closings	Net change in Location of Branches (+ or -)				
			Low	Mod	Mid	Upper	NA
Chicago MMSA AA	2	1	0	0	0	+1	0

As of November 30, 2018, WFBNA operated 12 branches and 10 ATMs in the Chicago MMSA AA. Of these branches, nine are full-service locations and three are limited-service branches. There is one branch in a low-income geography and no branches in moderate-income geographies. The branch distribution in low-income geographies is near to the percentage of the population in low-income geographies and branch distribution in moderate-income geographies is significantly below the percentage of the population in the moderate-income geographies in the AA. The bank operates one branch within close proximity to LMI geographies; however, the bank's branch distribution did not improve when compared to demographics.

The institution's opening and closing of branches have not affected the accessibility of its delivery systems, particularly in LMI geographies and/or to LMI individuals. The bank opened two branches in upper-income geographies. The bank subsequently closed one of the new branches in an upper-income geography.

Services, including where appropriate, business hours, do not vary in a way that inconveniences the various portions of its AA, particularly LMI geographies and/or individuals. While there are slight variations in opening and closing times, all branches are open Monday through Friday from 9:00 am to 5:00 pm with one branch opening at 8:00 am and seven branches closing at 6:00 pm. Seven of 12 branches are also open on Saturdays from 9:00 to 2:00 pm and one branch open from 9:00 am to noon. All WFBNA services are available at all branches and all delivery systems discussed bank-wide are available in this AA.

Community Development Services

The institution is a leader in providing CD services.

The level of CD services in the Chicago MMSA AA is excellent. Bank records show that employees provided their financial or job-specific expertise and/or technical assistance for 118 CD service activities to 34 organizations since the last evaluation, logging a total of 482 qualified hours within this AA. A majority (86 percent) of the bank's assistance was to organizations that provide community services to LMI individuals and families. Other activities targeted affordable housing (13 percent) and economic development (1 percent). The bank's financial assistance provided was responsive to the identified needs in the AA particularly affordable housing. The following are examples of CD services provided in this AA:

- A WFBNA team member provided 18 hours of Board service to an affordable housing organization that preserves affordable homeownership by repairing the homes of low-income elderly and disabled individuals ensuring their health and safety.
- Ten WFBNA team members provided financial education at a school, where according to the NCES, the free- and reduced-lunch program participation rate is 99.0 percent.

Multistate Metropolitan Statistical Area Rating

Columbus-Auburn-Opelika, GA-AL CSA (Columbus MMSA AA)

CRA rating for the Columbus MMSA AA⁴: Satisfactory

The Lending Test is rated: High Satisfactory

The Investment Test is rated: Needs to Improve

The Service Test is rated: High Satisfactory

The major factors that support this rating include:

- Excellent level of lending activity;
- Adequate geographic distribution of loans;
- Good borrower distribution of loans;
- Adequate level of CD loans;
- WFBNA's use of flexible products has a neutral impact on the Lending Test;
- Poor level of CD investments;
- Retail delivery systems are readily accessible to all portions of the AA; and
- Adequate CD services.

Description of Institution's Operations in Columbus MMSA AA

WFBNA delineated two AAs within the Columbus-Auburn-Opelika, GA-AL CSA. Refer to Appendix A for a complete description of the AA. These areas were combined, analyzed, and presented at the CSA level with an AA name of Columbus MMSA. The Columbus MMSA AA represents the 41th largest rated area in terms of deposits. WFBNA has \$1.1 billion of deposits in the Columbus MMSA AA representing 0.1 percent of adjusted deposits. WFBNA ranked second with 9.3 percent market share out of 30 depository institutions in the AA. The top bank within the MMSA in terms of deposits was Synovus Bank with 49.9 percent market share. WFBNA operates 14 branches and 37 ATMs within the Columbus MMSA AA, representing 0.3 percent of the bank's branches and 0.3 percent of the bank's ATMs. In comparison to the percentage of deposits and branching network, the bank originated and purchased \$2.4 billion in loans, or 0.1 percent of total loans originations and purchases during the evaluation period. The bank's primary loan products in the Columbus MMSA AA are home mortgage and small loans to businesses.

Demographic Data

The following table provides a summary of the demographics that include housing and business information for the Columbus MMSA AA. The table shows that the volume of OOU's is very small in low-income tracts and over 40 percent of families in the AA are LMI. The area's median housing value in the Columbus MMSA AA is 2.3 times the MSA median income but 2.8 times moderate-, and 4.6 times low-income, indicating a limited proportion of OOU's are affordable to LMI residents. Median

⁴This rating reflects performance within the multistate metropolitan statistical area. The statewide evaluations do not reflect performance in the parts of those states contained within the multistate metropolitan statistical area.

rents and the high percentage of families below poverty level suggest rental housing is also unaffordable for many low-income residents.

Due to rounding, totals may not equal 100.0

(*) The NA category consists of geographies that have not been assigned an income classification.

Economic Data

Auburn-Opelika, AL MSA

According to the December 2018 Moody's Analytics report, Auburn's economy is on firmer ground. The metro area remains at risk of a recession, but recent data is very promising. Job growth over the last three to six months is flying well above the Alabama and U.S. rates and year ago growth of 2 percent is the fourth highest in the state.

Auburn is a college town, home to Auburn University. Auburn University creates a significant international presence within the community with 1,639 international students enrolled and 1,100 international employees. Many other foreign nationals live and work in the community with an estimated two of three residents from other parts of the country. Auburn's economy centers on Auburn University and providing university-affiliated services. Auburn University employs 4,300 people, or roughly one-quarter of the Auburn's total workforce. In addition, the federal and state government employs 2,400 Auburn residents in positions generally connected with the university. Some 8,500 employees are in service sector jobs. Auburn's industrial base is built around mid-size, high-tech manufacturing and research firms. Auburn has one industrial park and four technology parks where main areas of industrial focus are manufacturing of small engines, automotive wheels, fuel cells, plastic injection technology, and vehicle armor.

According to the U.S. BLS, the unemployment rate for the fourth quarter of 2018 was 3.7 percent and has decreased significantly from 6.8 percent at the beginning of the evaluation period. The unemployment rate in the AA was slightly higher than the overall State of Alabama (3.5 percent) during the same period.

Columbus, GA-AL MSA

According to the April 2018 Moody's Analytics report, the Columbus economy is making strides and edging closer to the middle of the pack among its Georgia peers. Construction and manufacturing are spearheading the robust gains with near six percent year-over-year increase in payrolls in the first quarter along with lifting goods-producing employment to its highest level since 2008. The rapid pace of factory job additions will not last as durable manufacturers employ more than half of the Columbus' factory workers. Fierce competition and demand fatigue could limit sales growth and hiring along with import tariffs on aluminum and steel as inputs in production are another hurdle in the outlook. Outside of leisure/hospitality and education/healthcare, private services are detracting from job growth.

The outlook for the housing market is worse than average in coming years with lagging demographics. With a better job mix and tightening labor market, bigger pay gains help make up for modest job growth and driving faster increases in labor income, which helped lift single-family existing-home sales to a 12-year high. Longer term, persistent outmigration of the young and educated will limit gains due to better job and wage alternatives in neighboring Auburn, AL and Atlanta, GA. Household formation and home sales are expected to fall in 2019. Low inventory has been a hurdle nationally and the Columbus MMSA is no exception. Home sales have slowed but a lack of supply is preserving upward pressure on prices.

The major economic drivers for the MMSA are defense, manufacturing, and financial services. The largest employers in the Columbus MMSA includes the U.S. Fort Benning, TSYS, AFLAC Inc., and Kia Motors Manufacturing. Earlier cutbacks at top employer Fort Benning is easing up and job prospects improved. According to the U.S. BLS, the unemployment rate for the first quarter of 2018 was 5.3 percent and decreased significantly from 9.2 percent at the beginning of the evaluation period. The unemployment rate in the AA was slightly higher than both the overall States of Georgia (3.7 percent) and Alabama (3.5 percent) during the same period.

Community Contact

The analysis takes into consideration comments provided by a community contact for the City of Auburn (Auburn) that serves the bank's Columbus MMSA AA. The contact represents a municipal Community Development Office.

The City of Auburn established a Community Development Block Grant (CDBG) in 2000 and utilizes the funds for a broad range of capital projects to preserve and develop a viable community, principally to benefit LMI residents. The CDBG program is a flexible program that provides communities with resources from the U.S. Department of Housing and Urban Development (HUD) to address a wide range of unique community development needs. The Community Development Division of Economic Development administers the daily operation of the CDBG program, including the provision of decent, safe, and sanitary housing by funding housing rehabilitation, constructing new affordable housing units, reconstructing units, and demolishing abandoned and dilapidated structures in residential areas. Auburn

also uses CDBG funds to revitalize LMI residential areas by improving infrastructure and public facilities with resources allocated to local non-profit organizations to subsidize supportive services.

Federal programs, such as CDBG and Urban Development Action Grants allow Auburn to bring substandard houses up to standard and build new houses for first-time homeowners. The Community Development Division's efforts aid LMI citizens through a variety of programs, such as the Affordable Housing Program and mortgage subsidies from the Revolving Loan Fund (RLF). Auburn also funded the Northern Auburn Housing Development, an affordable housing developer. According to the City of Auburn representative, the economy has been good for the last twenty years and noted limited opportunities for local banks to assist apart from some helping with homeowner education.

Considering the information from the community contact, bank management, and demographic and economic data, affordable housing is the primary credit need of the AA. Opportunity exists to originate these types of loans throughout the AA; however, it is limited in the low-income geographies as reflected by the small proportion of OOU's and small businesses coupled with limited home affordability for low-income individuals. The AA also has CD needs including small business and economic development as well as job training and financial education particularly for LMI individuals.

Scope of Evaluation in Columbus MMSA AA

The rating for the Columbus MMSA AA is based on a FS evaluation of the bank's performance in the combined Columbus-Auburn-Opelika, GA-AL CSA. The Columbus MMSA AA represents a limited portion of the bank's overall lending, investments, and services; therefore, the performance in the MMSA received less weight in determining the bank's overall CRA Rating.

CONCLUSIONS WITH RESPECT TO PERFORMANCE TESTS IN COLUMBUS MMSA AA

LENDING TEST

The bank's performance under the Lending Test in the Columbus MMSA AA is rated High Satisfactory.

Based on a FS review, including the data in the tables below and consideration of performance context discussed in the lending test, the bank's performance in the Columbus MMSA AA is good.

Lending Activity

Based on the tables below, lending levels reflect excellent responsiveness to the credit needs in the AA taking into account the number and dollar amount of home mortgage, small business, small farm, and CD loans originated or purchased relative to its capacity based on deposits, competition, and market presence.

Number of Loans					
Assessment Area	Home Mortgage	Small Business	Small Farm	Community Development	Total
Columbus MMSA	12,619	3,528	59	2	16,208

Dollar Volume of Loans (000's)					
Assessment Area	Home Mortgage	Small Business	Small Farm	Community Development	Total
Columbus MMSA	\$2,225,639	\$173,749	\$2,530	\$12,409	\$2,414,327

WFBNA ranked second in deposits with 9.3 percent market share in the AA. In overall HMDA lending, WFBNA ranked first with 9.0 percent market share. There is strong competition as reflected by the 345 lenders and 30 depository institutions in the AA. In terms of mortgage lending market share, the number two lender in the market was Renasant Bank with 6.6 percent.

In small loans to businesses, WFBNA ranked fourth with a market share of 6.9 percent. The top three lenders were American Express with a market share of 20.1 percent, Synovus Bank with a market share of 8.3 percent, and Citibank with a market share of 7.0 percent.

Distribution of Loans by Income Level of the Geography

The bank exhibits an adequate geographic distribution of loans in its AA.

Home Mortgage Loans

Refer to Table O in the “MMSA” section of appendix D for the facts and data used to evaluate the geographic distribution of the bank’s home mortgage loan originations and purchases. The bank’s overall geographic distribution of home mortgage loan originations and purchases for this evaluation is adequate.

- The bank’s performance in both periods, 2012-2016 and 2017-2018, for home mortgage loans in low-income geographies is well below the aggregate distribution of loans and is significantly below the proportion of OOUs in those geographies.
- The proportion of loans in moderate-income geographies is below the aggregate distribution of loans and is well below the proportion of OOUs in those geographies.

Small Loans to Businesses

Refer to Table Q in the “MMSA” section of appendix D for the facts and data used to evaluate the geographic distribution of the bank’s originations and purchases of small loans to businesses. The bank’s overall geographic distribution of small loans to businesses for this evaluation is good.

- The bank’s performance in both periods, 2012-2016 and 2017-2018, for small business loans in low-income geographies is below both the aggregate performance and the proportion of businesses located in those geographies.
- The proportion of loans in moderate-income geographies exceeds the aggregate distribution of loans and is near to the proportion of businesses located in those geographies.

Distribution of Loans by Income Level of the Borrower

The bank exhibits a good distribution of loans among individuals of different income levels and businesses of different sizes.

Home Mortgage Loans

Refer to Table P in the “MMSA” section of appendix D for the facts and data used to evaluate the borrower distribution of the institution’s home mortgage loan originations and purchases. The bank’s overall borrower distribution of home mortgage loan originations and purchases for this evaluation is good.

- The Columbus MMSA AA has homeownership affordability hurdles especially for low-income borrowers. As noted above, the area’s median housing value is 4.6 times the income of low-income borrowers indicating a limited proportion of OOUs are affordable to low-income individuals. Despite the affordability challenges, the bank’s overall home mortgage lending to LMI borrowers in both periods, 2012-2016 and 2017-2018, substantially meets the aggregate distribution of loans.
- The bank’s performance for lending to low-income borrowers is significantly below the proportion of families and lending to moderate-income borrowers is below the proportion of families.

Small Loans to Businesses

Refer to Table R in the “MMSA” section of appendix D for the facts and data used to evaluate the borrower distribution of the institution’s originations and purchases of small loans to businesses. The distribution of the bank’s originations and purchases of small loans to businesses by revenue is excellent.

- For the 2012-2016 period, the bank’s distribution of small loans to businesses with revenues of \$1 million or less exceeds the aggregate small business lending data for businesses with revenues of \$1 million or less and is near to the percentage of small businesses located in the AA.
- The bank’s small business lending in 2017-2018 is slightly lower than the combined performance in 2012-2016.

Community Development Lending

The institution has made an adequate level of CD loans.

The Lending Activity Tables, shown above, set forth the information and data used to evaluate the institution’s level of CD lending. These tables include all CD loans, including multifamily loans that also qualify as CD loans.

The level of CD lending in the Columbus MMSA AA is adequate. WFBNA made two CD loans totaling \$12.4 million in its AA, which represents 10.5 percent of allocated tier 1 capital. Although the bank only originated two loans during the six-year time period, the loans represented a significant amount of tier 1 capital. Both CD loans were for the primary purpose of affordable housing, which is a critical CD need in the bank’s AA.

Examples of CD loans in the AA include:

- In October 2018, WFBNA provided a \$12.3 million loan for an affordable LIHTC housing development located in Phoenix City, Alabama with 98.8 percent of the units restricted to tenants earning no more than 60 percent of the area MFI.
- In April 2015, WFBNA renewed a \$79,000 term loan for a multifamily housing development located in a moderate-income census tract in Columbus, GA. The development consists of 12 two-bedroom units with 100 percent of the actual rent rates below the 2015 Fair Market Rent for the area and 100 percent of the units affordable to tenants earning between 44 and 60 percent of the 2015 area MFI of \$58,200.

Product Innovation and Flexibility

The institution makes limited use of innovative and/or flexible lending practices in order to serve AA credit needs. Under the *yourFirstMortgage* loan program the bank funded 21 loans totaling \$1.9 million to LMI homebuyers that qualified under this program. Refer to the comments in the institution Innovative or Flexible Lending Programs section of this performance evaluation for additional details regarding this program.

INVESTMENT TEST

The bank’s performance under the Investment Test in the Columbus MMSA AA is rated Needs to Improve.

Based on a FS review, including the data in the table below and consideration of performance context discussed in the investment test, the bank’s performance in the Columbus MMSA AA is poor.

Qualified Investments										
Assessment Area	Prior Period*		Current Period		Total				Unfunded Commitments**	
	#	\$(000’s)	#	\$(000’s)	#	% of Total #	\$(000’s)	% of Total \$	#	\$(000’s)
Columbus MMSA	5	\$322	66	\$810	71	100.0	\$1,132	100.0		

* Prior Period Investments' means investments made in a previous evaluation period that are outstanding as of the examination date.

** Unfunded Commitments' means legally binding investment commitments that are tracked and recorded by the institution's financial reporting system.

The institution has a poor level of qualified CD investments and grants, but not in a leadership, particularly those that are not routinely provided by private investors. The current and prior period investments dollar volume represents only 1.0 percent of tier 1 capital allocated to the AA.

The institution exhibits poor responsiveness to credit and community economic development needs identified in the AA. There are opportunities available within the AA for the bank to provide CD investments; however, the bank opted to make a majority of the CD investment in smaller grants within the AA. The bank provided 65 grants totaling \$750,000 to a variety of organizations that primarily support affordable housing, community services, economic development, and revitalization/stabilization for LMI individuals and geographies. Of the total investments, the bank allocated 65 percent of the dollar volume of the bank’s current and prior period investment for affordable housing, which is an identified credit need in the AA.

The institution rarely uses innovative and/or complex investments to support CD initiatives.

Examples of CD investments in the AA include:

- In May 2015, WFBNA provided a \$4.8 million investment in a government single-family mortgage backed security, of which \$59,200 directly benefits LMI borrowers in the AA. Refer to the comments in the institution Community Development Initiatives section of this public evaluation for additional details regarding this program.
- In October 2017, WFBNA provided two grants totaling \$160,000 to two local housing organizations as part of the PMP for affordable housing in the Columbus MMSA AA. Refer to the comments in the institution Innovative or Flexible Lending Programs section of this public evaluation for additional details regarding this program.

SERVICE TEST

The institution’s performance under the Service Test in the Columbus MMSA AA is rated High Satisfactory.

Based on a FS review, including the data in the tables below and consideration of performance context discussed in the service test, the bank’s performance in the Columbus MMSA AA is good.

Retail Banking Services

Service delivery systems are readily accessible to geographies and individuals of different income levels in the institution’s AA.

Distribution of Branch Delivery System											
Assessment Area	Deposits % of Rated Area Deposits in AA	# of BANK Branches	% of Rated Area Branches in AA	Branches Location of Branches by Income of Geographies (%)				Population % of Population within Each Geography*			
				Low	Mod	Mid	Upp	Low	Mod	Mid	Upp
	Columbus MMSA		100.0	14	100.0	14.3	28.6	42.9	14.3	6.1	25.1

* May not add up to 100 percent due to geographies with unknown tract income level and rounding. Population in census tracts with income unknown represent 1.4 percent the AA.

Distribution of Branch Openings/Closings						
Assessment Area	# of Branch Openings	# of Branch Closings*	Net change in Location of Branches (+ or -)			
			Low	Mod	Mid	Upper
Columbus MMSA	0	-4	0	-1	-1	-1

* Net change may not add up to total # of branch closings due to geographies with unknown tract income level.

As of December 31, 2018, WFBNA operates 14 branches and 37 ATMs in the Columbus MMSA AA. All of these branches are full-service locations. There are 6 branches in the LMI geographies. The branch distribution in LMI geographies exceeds the percentage of the population in LMI CTs in the AA. When considering an additional five branches within close proximity to LMI geographies, the bank's distribution further exceeds demographics.

The institution's opening and closing of branches have not affected the accessibility of its delivery systems, particularly in LMI geographies and/or to LMI individuals. The bank closed four branches including one in each of the moderate-income, middle-income, and upper-income geographies. An additional branch was closed in a geography with unknown tract income level. The bank did not open any new branches. The branch closure in the moderate-income geography did not negatively impact the distribution of branches relative to the population residing in LMI geographies.

Services, including where appropriate, business hours, do not vary in a way that inconveniences the various portions of its AA, particularly LMI geographies and/or individuals. Generally, branches are open Monday through Friday from 9:00 am to 6:00 pm. Nine of the 14 branches are open on Saturdays from 9:00 am to 1:00 pm. All WFBNA services are available at all branches and all ADS discussed bank-wide are available in this AA.

Community Development Services

The institution provides an adequate level of CD services.

The level of CD services in the Columbus MMSA AA is good. Bank records show that employees provided their financial or job-specific expertise and/or technical assistance for 136 CD service activities to 40 organizations since the last evaluation, logging a total of 304 qualified hours within this AA. A majority of the bank's assistance was to organizations that provide community services to LMI individuals and families. Other activities targeted affordable housing and economic development. The following are examples of CD services provided in this AA:

- A WFBNA team member provided 4 hours of financial education at a community organization that provides affordable housing in the Columbus region by developing, revitalizing, and managing contemporary housing communities.
- WFBNA team members provided 11 hours of financial education at a private, non-profit community action agency whose purpose is to reduce the cause and conditions of poverty. This agency provides opportunities and assistance to residents within an eight-county area of the lower Chattahoochee Valley including Chattahoochee, Clay, Harris, Muscogee, Quitman, Randolph, Stewart, and Talbot.

Multistate Metropolitan Statistical Area Rating

Davenport-Moline-Rock Island, IA-IL MSA (Davenport MMSA AA)

CRA rating for the Davenport MMSA AA⁵: Satisfactory

The Lending Test is rated: High Satisfactory

The Investment Test is rated: Needs to Improve

The Service Test is rated: High Satisfactory

The major factors that support this rating include:

- Adequate lending activity;
- Good distribution of loans by borrower profile;
- Good geographic distribution of loans;
- Poor level of CD loans;
- WFBNA's use of flexible products has a neutral impact on the Lending Test;
- Poor level of CD investments;
- Retail delivery systems are readily accessible to all portions of the AA; and
- Adequate CD services.

Description of Institution's Operations in Davenport MMSA AA

WFBNA delineated one AA within the Davenport MMSA AA and includes the Davenport-Moline-Rock Island, IA-IL MSA. Refer to Appendix A for a complete description of the AA. WFBNA has \$1.3 billion of retail deposits in the Davenport MMSA AA representing 0.1 percent of adjusted deposits. The Davenport MMSA AA represents the 40th largest rated area in terms of deposits. In the Davenport MMSA AA, WFBNA ranked second out of 35 institutions with 15.5 percent market share. The top bank within the MMSA in terms of deposits is Quad City Bank and Trust Company with a slightly higher 15.6 percent deposits. WFBNA operates 12 branches and 18 ATMs within the Davenport MMSA AA, representing less than 0.1 percent of the bank's branches and less than 0.1 percent of the bank's ATMs. In the Davenport MMSA, the bank originated and purchased \$1.4 billion in loans, or 0.1 percent of total loan originations and purchases during the evaluation period. The bank's primary loan products in the Davenport MMSA is home mortgage loans and small business loans.

Demographic Data

The following table provides a summary of the demographics that include housing and business information for the Davenport MMSA AA. The table shows that the volume of OOU is very small in low-income tracts and over 38 percent of families in the AA are LMI. The area's median housing value in the Davenport MMSA AA is twice the MSA median income but 2.5 times moderate-, and four times low-income, indicating a limited proportion of OOU are affordable to low-income residents. Median

⁵ This rating reflects performance within the multistate metropolitan statistical area. The statewide evaluations do not reflect performance in the parts of those states contained within the multistate metropolitan statistical area.

rents and the high percentage of families below poverty level suggest rental housing is also unaffordable for many low-income residents.

Source: 2010 U.S. Census and 2016 D&B Data

Due to rounding, totals may not equal 100.0

(*) The NA category consists of geographies that have not been assigned an income classification.

Economic Data

According to the June 2018 Moody's Analytics report, Davenport's economy has lost the momentum it had at the start of 2018. Payroll employment has moved sideways this year and job growth over the last six months trails the state and national averages. Wage pressures are modest, and the housing market is not faring much better. Existing single-family home sales are flat, which is keeping a lid on new residential construction. Major area employers include John Deere, Rock Island Arsenal, and Genesis Health Systems.

Davenport will remain one of Iowa's weakest economies in 2019. Manufacturing will hold its own, while military spending will safeguard against federal government job losses. Longer term, poor population trends and a lack of secondary drivers will ensure Davenport is a perennial underperformer.

According to the U.S. BLS, the MSA unemployment rate as of June 2018 was 3.8 percent, down from 6.9 percent at the beginning of the evaluation period. The MSA unemployment rate was lower than the State of Illinois at 4.7 percent and higher than the State of Iowa at 2.6 percent during the same period.

Community Contact

The analysis takes into consideration comments provided by three community contacts that serve the

bank's Davenport MMSA AA. One organization focuses on economic development, one organization provides community service, and one organization promotes the coordination of and building the capacity of housing development throughout Scott County.

The organization providing community service serves the City of Rock Island. The contact indicated that the community's biggest needs are to promote growth of residential areas and redevelopment of the City of Rock Island. There is a lot of older housing stock that needs to be rehabilitated.

The housing service organization in Scott County indicated that people in the City of Rock Island earning 60 percent of the area MFI are having a hard time finding rental housing. The area needs to promote entrepreneurship, small business advice, and low interest loans for small businesses. The area had an increase in the number of immigrants and refugees seeking services but are not aware of the services available.

Considering the information from the community contacts, bank management, and demographic and economic data, affordable housing and small business loans represent a primary credit need for the Davenport MMSA AA. Opportunity exists to originate these types of loans throughout the AA; however, it is limited in the low-income geographies as reflected by the small proportion of OOU's coupled with limited home affordability for LMI individuals. The AA also has CD needs including affordable housing and economic development.

Scope of Evaluation in Davenport MMSA AA

The rating for the Davenport MMSA AA is based on a FS evaluation of the bank's performance in the Davenport-Moline-Rock Island IA-IL MSA AA. A limited portion of the bank's overall lending, investments, and services were conducted in the Davenport MMSA AA; therefore, the performance in the Davenport MMSA AA received less weight in determining the bank's overall CRA Rating.

CONCLUSIONS WITH RESPECT TO PERFORMANCE TESTS IN DAVENPORT MMSA AA

LENDING TEST

The bank's performance under the Lending Test in the Davenport MMSA AA is rated High Satisfactory.

Based on a FS review, including the data in the tables below and consideration of performance context discussed in the lending test, the bank's performance in the Davenport MMSA AA is good.

Lending Activity

Based on the tables below, lending levels reflect adequate responsiveness to the credit needs in the AA taking into account the number and dollar amount of home mortgage, small business, small farm, and CD loans originated or purchased relative to its capacity based on deposits, competition, and market presence.

Number of Loans					
Assessment Area	Home Mortgage	Small Business	Small Farm	Community Development	Total
Davenport MMSA	8,368	3,333	226	12	11,939

Dollar Volume of Loans (000's)					
Assessment Area	Home Mortgage	Small Business	Small Farm	Community Development	Total
Davenport MMSA	\$1,161,728	\$233,842	\$33,539	\$2,635	\$1,431,744

WFBNA ranked second in deposits with 15.6 percent market share in the AA. In overall HMDA lending, WFBNA ranked third with 5.2 percent market share. Although WFBNA's HMDA market share is lower than its deposit market share, lending competition was significantly stronger, reflected by the 273 lenders, than competition for deposits, where there were only 35 depository institutions. The top two lenders in the market were IH Mississippi Valley Credit Union with 9.8 percent market share and Vibrant Credit Union with 6.8 percent market share.

In small loans to businesses, WFBNA ranked fifth with a market share of 8.0 percent. The top three lenders were US Bank with a market share of 17.3 percent, American Express with a market share of 12.3 percent, and Capital One with a market share of 10.0 percent.

Distribution of Loans by Income Level of the Geography

The bank exhibits a good geographic distribution of loans in its AA.

Home Mortgage Loans

Refer to Table O in the "MMSA" section of appendix D for the facts and data used to evaluate the geographic distribution of the bank's home mortgage loan originations and purchases. The bank's overall geographic distribution of home mortgage loan originations and purchases for this evaluation is good.

- For 2012-2016, the proportion of home mortgage loans in LMI geographies substantially meets the aggregate distribution of loans.
- The proportion of loans in low-income geographies is well below the proportion of OOU's and in moderate-income geographies is below the proportion of OOU's in those geographies.
- The bank's home mortgage lending in 2017-2018 is slightly below the combined performance in 2012-2016.

Small Loans to Businesses

Refer to Table Q in the "MMSA" section of appendix D for the facts and data used to evaluate the geographic distribution of the bank's originations and purchases of small loans to businesses. The bank's overall geographic distribution of small loans to businesses for this evaluation is good.

- For both 2012-2016 and 2017-2018 periods, the proportion of the bank’s small business loans in low-income geographies substantially meets the aggregate distribution of loans and is near to the proportion of businesses located in those geographies.
- The proportion of loans in moderate-income geographies is below both the aggregate distribution of loans and the proportion of businesses located in those geographies.

Distribution of Loans by Income Level of the Borrower

The bank exhibits a good distribution of loans among individuals of different income levels and businesses of different sizes in its AA.

Home Mortgage Loans

Refer to Table P in the “MMSA” section of appendix D for the facts and data used to evaluate the borrower distribution of the institution’s home mortgage loan originations and purchases. The bank’s overall borrower distribution of home mortgage loan originations and purchases for this evaluation is good.

- The Davenport MMSA AA has homeownership affordability hurdles especially for low-income borrowers. As noted above, the area’s median housing value is four times the income of low-income borrowers indicating a limited proportion of OOU’s are affordable to low-income borrowers. Despite the affordability challenges, the bank’s overall home mortgage lending to LMI borrowers in both 2012-2016 and 2017-2018 periods substantially meets the aggregate distribution of loans.
- The bank’s performance in lending to low-income borrowers is well below the proportion of families and lending to moderate-income borrowers exceeds the proportion of families.

Small Loans to Businesses

Refer to Table R in the “MMSA” section of appendix D for the facts and data used to evaluate the borrower distribution of the institution’s originations and purchases of small loans to businesses. The distribution of the bank’s originations and purchases of small loans to businesses by revenue is good.

- For 2012-2016, the percentage of small loans to businesses originated or purchased exceeds the aggregate small business lending data for businesses with revenues of \$1 million or less and is below the percentage of small businesses located in the AA.
- The bank’s small business lending in 2017-2018 exceeds the performance in 2012-2016.

Community Development Lending

The institution has made a poor level of CD loans.

The Lending Activity Tables, shown above, set forth the information and data used to evaluate the institution’s level of CD lending. These tables include all CD loans, including multifamily loans that also qualify as CD loans.

The level of CD lending in the Davenport MMSA AA is poor. WFBNA made 12 CD loans in its AA for a total of \$2.6 million, which represents 1.8 percent of allocated tier 1 capital. CD lending performance has a neutral impact on the lending test rating. None of the CD loans addressed affordable housing, which is a critical lending need in the AA. All CD loans were for the purpose of community services to LMI individuals.

Examples of CD loans in the AA include:

- In February 2016, WFBNA provided a \$650,000 working capital line of credit and renewed the line of credit in March 2017 for a nonprofit social service provider that provides adoption services, foster care placement and mediation, counseling services, domestic abuse advocacy, and employee assistance programs. According to the organization's Controller, 95 percent of clients are considered LMI individuals as they earn less than 80 percent of the 2016 area MFI.
- In May 2015, WFBNA renewed a \$100,000 working capital line of credit for a non-profit organization that creates fun recreational and learning experiences for children and young adults, including those with disabilities. The Chief Financial Officer of the organization stated that 51 percent of their clients are considered to be LMI individuals as they earn less than \$55,200 annually, which is 80 percent of the 2015 area MFI.

Product Innovation and Flexibility

The institution makes limited use of innovative and/or flexible lending practices in order to serve AA credit needs. Under the *yourFirstMortgage* loan program, the bank has funded 40 loans totaling \$3.7 million to LMI homebuyers that qualified under this program. Refer to the comments in the institution Innovative or Flexible Lending Programs section of this performance evaluation for additional details regarding this program.

INVESTMENT TEST

The bank's performance under the Investment Test in the Davenport MMSA AA is rated Needs to Improve.
